

PROJECT: Promoting health on successful grounds:
Enhancing hospitals' cooperation on emergencies

ACRONYM: MediciNet II

WORK PACKAGE: WP4

DELIVERABLE: D.4.2.1 – Development of WEB application for access
to electronic medical records

BENEFICIARY: Multi-Profile Hospital for Active Treatment
"Dr. Atanas Dafovski" AD

WEBSITE: <http://www.medicinet.eu>

The Project is co-funded by the European Regional Development Fund (ERDF) and by national funds of the countries participating in the Interreg V-A "Greece-Bulgaria 2014-2020" Cooperation Programme.

This deliverable has been produced with the financial assistance of the European Union. The contents of the deliverable are the sole responsibility of the project partners and can in no way be taken to reflect the views of the European Union, the participating countries, the Managing Authority and the Joint Secretariat.

Project

Promoting health on successful grounds: Enhancing hospitals' cooperation on emergencies / ACRONYM: MediciNet II

Deliverable 4.2.1

Development of WEB application for access to electronic medical records

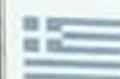

Multi-profile hospital for Active Treatment "Dr. Atanas Dafovski" AD outsourced and finally installed a new application that enables remote access to patient electronic medical records. The application has been developed for both Android OS and iOS, and can also be accessed via WEB using a Desktop Computer and a common browser.

More specifically, the application:

- Enables GPs in remote areas to access a patient's record stored in the hospital Information System (HIS) - administrative, demographic, and clinical information facts are available, such as family history, problems (diagnoses), allergies, medications, vital signs/physiological measurements, lab results/observations, procedures/imaging, discharge documents etc.
- Enables GPs to schedule visits and admissions and attach referral data.
- And also gives access to patients to their own laboratory results.
