Baltic Slurry Acidification PILOT INVESTMENTS

Helsinki, Finland, February 12, 2019

by
Jānis Kažotnieks
LRATC, Latvia

Baltic Slurry Acidification

WP3 tasks and timing

Task		Time
3.1.	Planning the pilot installations	Period 1-3
3.2.	Pilot procurement, installation and commissioning	Period 1-5
3.3.	Implementation of practical SAT research	Period 1-6
3.4.	Inaugurations and demonstrations of pilot installations	Period 4-6

Content

Baltic Slurry Acidification

I like to KISS 😊

1. Is WP3 the main WP?

2. Two SAT types out of three

3. Why and what?

4. How much was it?

5. What have we got?

The main WP?

Baltic Slurry Acidification

No equipment, no project

Not the real case, the last machine arrives just in summer 2018

Not much done with real machines

But we have got some good results in small scale 😊

Two out of three

Baltic Slurry Acidification

Why and what?

Baltic Slurry Acidification

Feasibility studies completed

Specs and procurement

5 in-field and 1 in-storage

How much was it?

Baltic Slurry Acidification

1,281 millions EUR

What have we got?

The tool to protect sea and save resources

Less NH₃ emissions

Extra 67 t N annually

No S as mineral fertiliser needed

But...

we have to be careful!
