

Testing of eCMR Indexing and Search System

Development funded by
DIGINNO-Proto

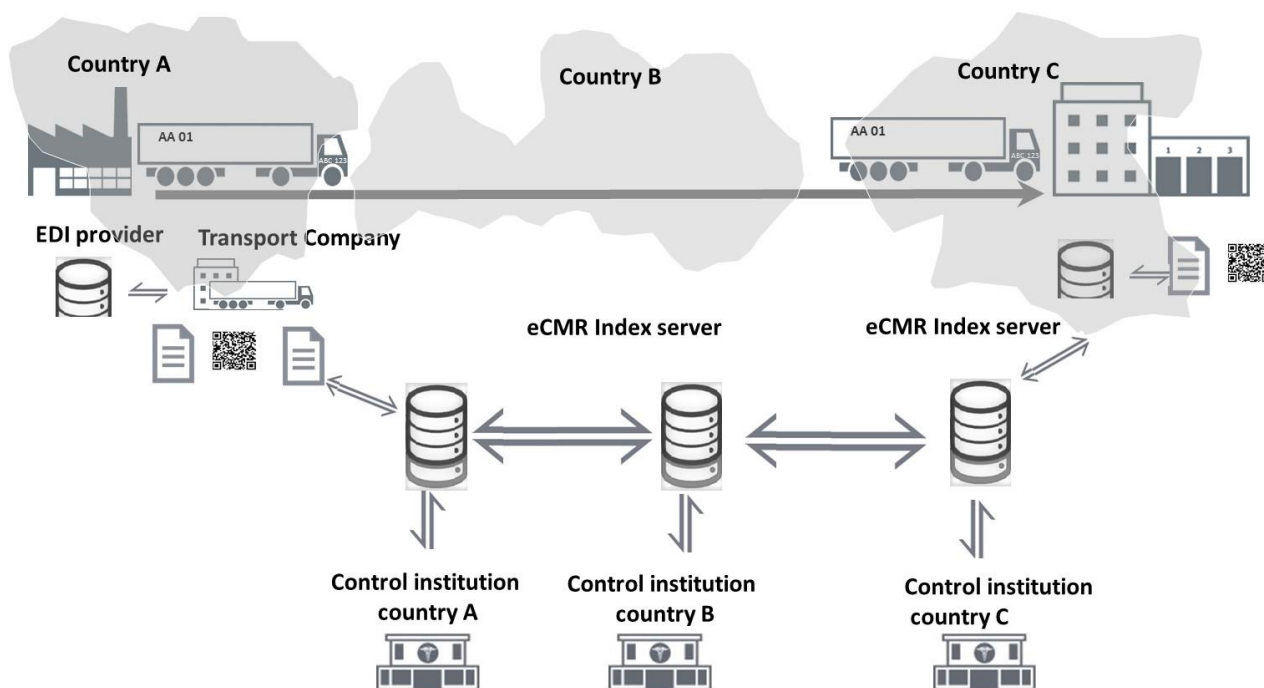

During testing, all parties of the project were possible to gather information, and plan further development of electronic data exchange in international / domestic transport sectors.

By performing test, participation countries checked:

- Possibilities to collect data about goods trade between participating countries.
- Interoperability of different operating systems in the countries.
- Ability to check / control the movement of goods at stationary and mobile control points in different countries.

BASIC (TRANSIT)

Consignment loaded in Country A, at the senders' premises is delivered to the Consignee in Country C, Truck is passing transit country (B):

In this prototype test, we planned to check ability of providing data to a transit country, where information about seller / buyer and content of goods in transit has lower level of importance,

Mentioned scenarios planned just for the testing of planned to create system prototype, and covered just part of trade/ transportation models, already used by economic operators in our countries. On the same time, it was necessary to evaluate all of them, in order to create data system, which will be acceptable as for the public and for trade.

PLANNED TIMELINE OF TESTING

Description	Period
Exchange of information on technical requirements	June - July 2020
Testing of eCMR prototype (cross-border exchange of information between servers)	August 2020
Full testing of eCMR prototype • ESTONIA. Load (warehouse / driver / truck / trailer) • ESTONIA. Control on the road • LATVIA. Control on the road • LITHUANIA. Control on the road • POLAND. Control on the road • POLAND. Unload (warehouse / driver / truck / trailer)	August-September 2020

Loads for transit for testing Diginno-Proto eCMR indexing registry
