

DIGITAL PERFORMANCE MONITORING

A vast number of factors can affect the operational efficiency of a vessel. Monitoring vessel performance makes it easier to identify potential inefficiencies.

With the help of digital technologies, solutions and models, it is possible to capture and analyse real-time operational data from vessels.

The data gained from digital performance monitoring enables the personnel to make informed decisions and to adjust operations and activities accordingly.

Digital performance monitoring can help to reduce a vessel's fuel consumption & emissions up to 20%, prevent breakdowns and reduce repair & maintenance costs.
