

Interregional Learning towards sustainable mobility in Europe: the Regio-Mob Experience

From Villemizero (*Zero Emission City*) good practices to REGIO-MOB.

**Exercise (see page 2) for monitoring and comparing the approaches
implemented by REGIO-MOB partners in their respective Action Plans**

available at the following link:

<https://www.interregeurope.eu/regio-mob/library/#folder=1199>

As part of the "Ville Emission Ze'ro" project carried out between 2006 and 2008 under INTERREG MEDOCC programme some cities were selected which, at the time, had the best practices of sustainable mobility in the EU, and thus Villemizero was the opportunity to show the way in which such best practices were used, through this video (see links below...). Why go through the complex process of acquiring best practices if local governments won't use them? This is what was asked while working on the villemizero project 12 years ago. Many things have changed since then, since 2008.

This is the reason why REGIO MOB has carried out the monitoring action of the 6 action plans drawn up by each partner, at regional level.
