AGRI –URBAN The local food in urban forks
Dr. George Ntalos

A message from our political leadership

The concept is based on the systematic development of the Agri-Economy sector, focusing on the mountainous areas of Greece. Agri- Economy sector can provide important solutions for creating job opportunities and promoting social cohesion, which is threatened due to the adverse economic environment, by contributing to the preservation of the natural environment and the cultural heritage of these areas.

The successful development of the Agri-Economy requires an approach that relies primarily on the local social dynamics and mechanisms which will play the central role for the manifestation of this dynamic. At the same time, the local dynamics can arise efficiently by utilizing the European experience in the field of Agri-Economy and encouraging transnational cooperation initiatives.

Although there are differences both in institutional frameworks and in the terminology about Agri-Economy among countries, they are getting inspired by common values and mainly by the fact that the participants are not aiming to profit, but the profits are reinvested for the benefit of the enterprise and the society.

Agro-Economy can play an important role in the development of innovation in many policy areas, such as addressing the unemployment and the environmental protection, while it can combine profitability through new job creation, enhancement of social cohesion, active participation and empowerment of local communities and generally, the development of an economy with democratic values, by giving priority to the nature and people.

*“Εν πάσι γαρ τοις φυσικοίς ενεστί τι θαυμαστόν.
Everythink that the nature greats is a miracle”
Aristoteles*

1. Executive Summary

URBACT Programme

For about 15 years, URBACT has been the European Territorial Cooperation programme aiming to foster sustainable integrated urban development in cities across Europe. It is an instrument of the Cohesion Policy, co-financed by the European Regional Development Fund, the 28 Member States, Norway & Switzerland.

URBACT's mission is to enable cities to work together and develop integrated solutions to common urban challenges, by networking, learning from one another's experiences, drawing lessons and identifying good practices to improve urban policies.

Following the success of the URBACT I and II programmes, URBACT III (2014-2020) has been developed to continue to promote sustainable integrated urban development and contribute to the delivery of the Europe 2020 strategy(link is external).

The URBACT III programme is organised around four main objectives:

1. **Capacity for Policy Delivery:** to improve the capacity of cities to manage sustainable urban policies and practices in an integrated and participative way.
2. **Policy Design:** to improve the design of sustainable urban policies and practices in cities.
3. **Policy Implementation:** to improve the implementation of integrated and sustainable urban strategies and actions in cities.
4. **Building and Sharing Knowledge:** to ensure that practitioners and decision-makers at all levels have access to knowledge and share know-how on all aspects of sustainable urban development in order to improve urban development policies.

To reach these objectives, URBACT III develops 3 types of interventions:

- transnational exchanges,
- capacity-building,
- capitalisation & dissemination.

AGRI-URBAN Project

AGRI-URBAN is about Rethinking Agrifood Production in Small and Medium-sized Cities. Many small and medium-sized cities across Europe have a relative specialization in Agrifood production. Roughly speaking, it is a seemingly mature industry, which still plays an important role in terms of GDP, employment and environmental sustainability. That is why new growth potentials have to be activated by means of innovation, new business models or making the most of the cluster approach.

We will tackle initiatives related to short circuits of production and consumption, access to land

and employment for youth in agriculture, training policies and support for the inclusion of new producers, urban agriculture, organic products or planning regulations related to agricultural land. A new link between urban and rural spaces, through an integrated urban focus and putting the target in

employment creation is our main purpose.

This link is based on a multi-dimensional concept of sustainability which includes three types of objectives: Socio-cultural - promoting quality of life and wellness, strengthening sense of place in the local communities and creating jobs in the food sector, empowering communities by strengthening the role of citizens in economic development, Economic: territorial integration attracting and retaining population, improving city image, increasing competitiveness, attracting professionals and entrepreneurs and Environmental: promoting organic farming and good practices, as well as environmental measures, soil preservation avoiding urban occupation of fertile land and incorporating agriculture in appropriate urban spaces and in the urban-rural interface; fostering multi-functionality in rural lands.

- **During the first phase of the AGRI-URBAN project, the cities of Fundão (Portugal), Marchin (Belgium), Cesena (Italy), Södertäje (Sweden) and Pyli (Greece) join the lead partner city, Baena (Spain), to form a partnership that will be enlarged up to ten cities in the second phase. The cities join during the second phase was Jelgava (Latvia), Petrinja (Croatia), Mouans- Sartoux (France), Mollet-del-Valles (Spain), Monmouthshire county (Wales).**

Key Output from the Project – Integrated Action Plan

Each of the Project Partner has to develop an IAP dealing with their local problems within the agri-forest sector and provide with solutions and actions in order to solve these problems. The number of actions that will be proposed from the IAP will be limited in number, but will reflect the strategic problems and challenges of Pyli Municipality and land keepers are facing. Like any good plan or strategy, there is continuous engagement of stakeholders in order to ensure that they are aware of the emerging problems and solutions and are ultimately engaged into the process and the project. The actions that are being developed are tested against strict criteria to identify relevant bodies such as agencies, local and regional authorities and Government Departments that could make resources available, and that there will ultimately be a body responsible for the implementation of each action. Relevant funding bodies and new unconventional funding models are being explored and identified, to ensure that there are appropriate resources available to support the plan and its actions.

Each of the Countries taking part in this project has its ideas and there is an effort to share them in order to find a common way of solutions. The ideas Pyli came up with mostly deal with finding the way for businesses to stay “alive” and hoping that the “good days” are coming back soon. That’s why we will find more ideas on how to keep all these land in use instead of changing their usage. There are also proposals on how to reinforce the “Agricultural production”

Give them hope....

2. City Profile

The word “Pyli” means “Gate” and indicates the passage of great importance from the lowlands to the mountains above, which had been the only road that could be used when travelling, trading and way to move the livestock from the winter to the summer pastures

Apart from the town of Pyli, well known are smaller villages as *Elati* and *Pertouli*, which are the second touristic attraction in Trikala Prefecture, and the village of *Gomfoi* with ancient ruins aged before 345 B.C. when King Phillip the Second –Alexander the Great’s father- conquered it and Julius Caesar passed by in 48 B.C

Municipality of Pyli lies on a "geographical zone" in the southwestern part of Trikala Prefecture. The area includes highlands and lowlands (dynamic) local districts, according to Directive 75/268/EEC.

In total, the area includes 43 out of 146 local and community districts of Trikala Prefecture, while 33 of them are characterized as highlands and 10 are characterized as dynamic (lowlands).

Geographical Location

Municipality of Pyli as it stands today was a “product” of the union of 7 former smaller municipalities (with 43 villages in total) that took

place by the Greek Government in 2011. It is the one of the 4 Municipalities of Trikala’s Prefecture in the central of Greece and the Region of Thessaly. It is placed at the southwestern part of the Prefecture. Each part/ former municipality is called “City Section of –name-” and they are:

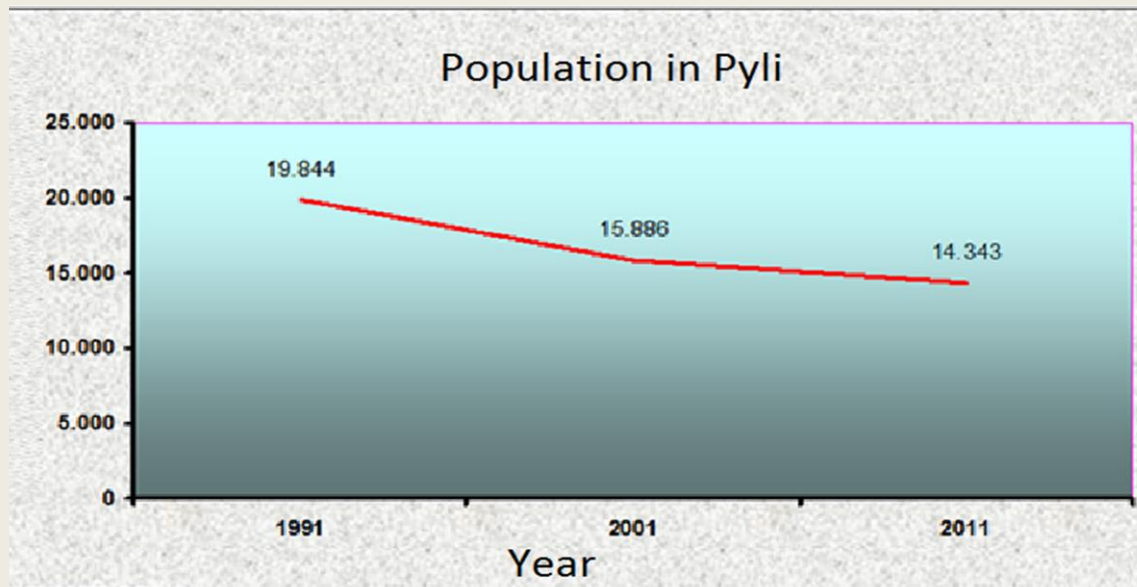

- City Section of Pyli consisted by 7 villages
- City Section of Gomfon consisted by 6 villages
- City Section of Pialion consisted by 5 villages
- City Section of Ethikon consisted by 11 villages
- City Section of Pindeon consisted by 9 villages
- City Section of Myrofylo consisted by 1 village
- And City Section of Neraida consisted by 4 villages

The distance from the capital of Greece Athens is 325km and from the co-capital Thessaloniki 215 km. The transition to the area can be accomplished by car or train. The distance between the city of Trikala and the Town of Pyli is only 29km, while the most distant village is at 65km from Pyli.

Population

The permanent population of the Municipality of Pyli, based on the 2001 census of EL.STAT (Hellenic Statistic Authority), rises up to 15.886 residents. The total population of the area, based on the provisional results of the 2011 census of EL.STAT, rises up to 14.210 residents. According to the data of the 2001 and 2011 census of EL.STAT., over the last decade, a depopulation of the area by 10,55% is observed. The high dependency ratio (0.61), is considered to be evidence of unsatisfactory economic development perspective in the area. Regarding the ageing index in the area of 2001, the ratio is 1.65 (165 elderly for every 100 children). As for the economically active population in 2001, it is amounted to be 5.880 people, with 5.290 employed people (percentage 89.97%) and 590 unemployed people (percentage 10.03%). According to the data of EL.STAT., the unemployed people in the area were 600 in 2001, 709 in 2001, while they reached 805 in October of 2014. That means that the unemployed people were increased by 18.17% and 34.17% in the last 10 and 20 years respectively.

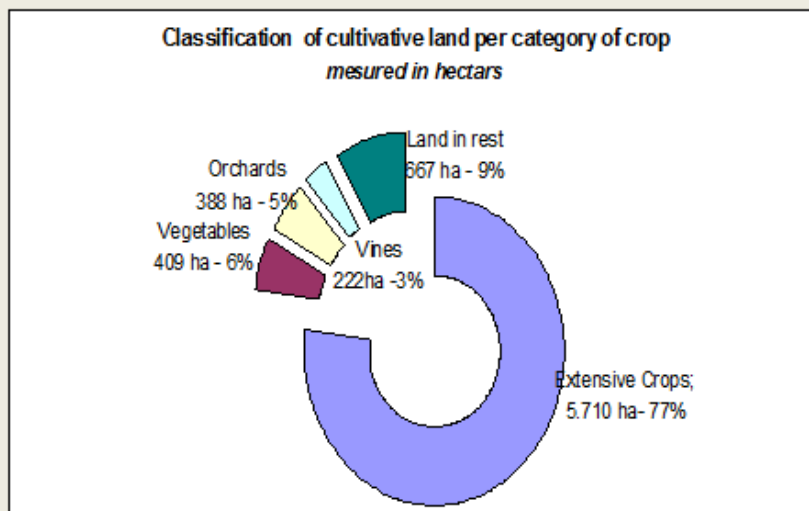

Agriculture and livestock production

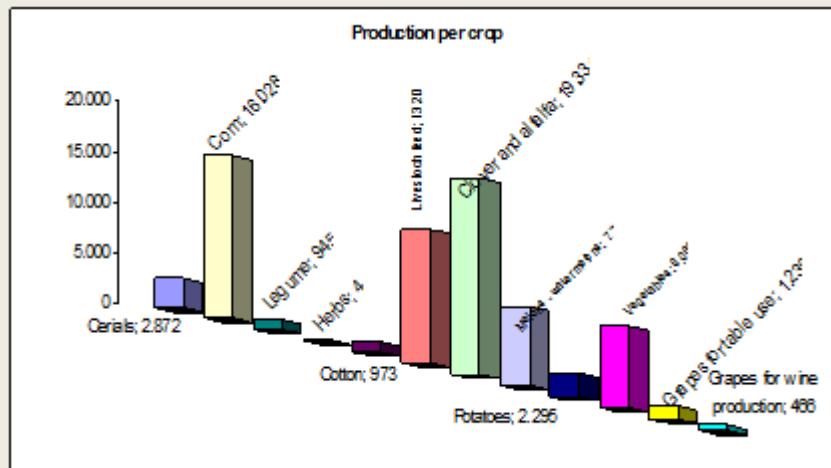

- As far as the agriculture production is concerned the 53% of the cultivated fields are placed in the Section of Gomfoi (6 villages in the plains) and the least production is from the area of Myrofyllo up in the mountains.

- The 77% of the fields are cultivated with intensive crops such as corn, cotton, trefoil etc. mostly placed in the plains, second come the vegetables all over the municipality mainly for personal-family use and last orchards and vines.

- It is important to mention that there is a very high variety of cultivated crops. **We produce everything except citrus and olives**, because they cannot thrive due to the hard wintertime in our area.

Geomorphology

The area of the Municipality of Pyli is characterized mountainous or highland (percentage 87.38%) and lowland (percentage 12.62%).

The permanent population of the Municipality of Pyli, based on the 2011 census of EL.STAT (Hellenic Statistic Authority), rises up to 14.210 residents. Although 10 of the 43 villages are placed in the plains, the ¾ of the population live there. 4 of the villages are inhabited only during summertime for vacation and livestock movers and breeders.

Village of Palaionastiro -plains

Village of Moschofyto-mountains

Local economy and Employment

- Local economy and employment are mainly based in agriculture and it's interdependence with the livestock production in the mountainous areas of the region, by creating a strong relationship for the productive sector of local economy. The current situation is characterized by small agricultural holdings and allotments, lack of basic infrastructure and information regarding the mentioned sectors, small farm average size and low educational level of the farmers.

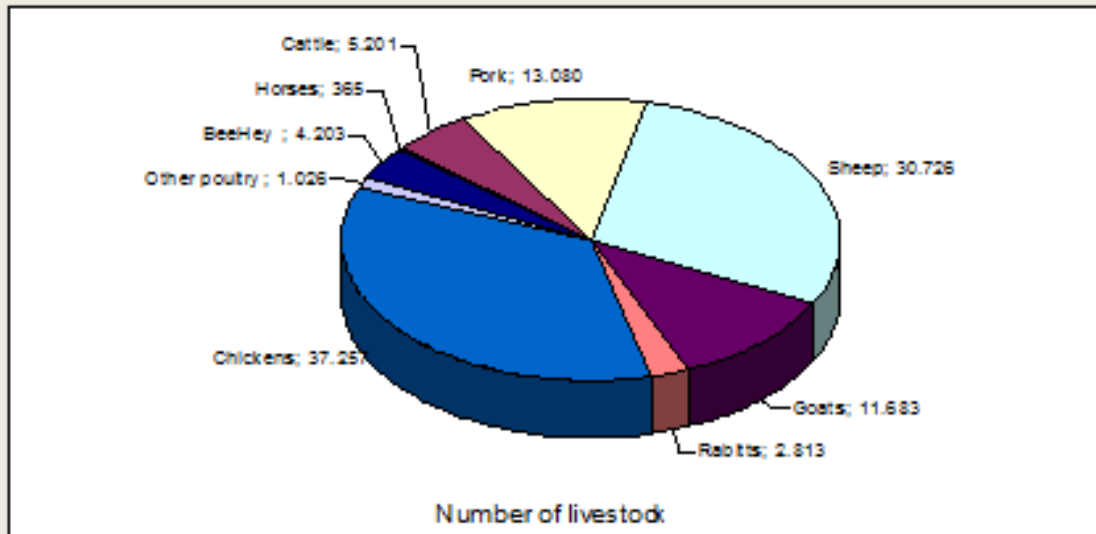

- Forests are mainly located in the mountainous areas of the region with many of them being degraded. Forest exploitation in the area is limited to the production of forest products, especially timber and forage production. As concerns the forest products processing in the study area, there are 24 wood and wood products industries, 24 furniture manufacturing industries and one paper pulp, paper and paper products industry. Produced wood products are mainly available in local and national enterprises, while the exports are limited.

- The livestock production is placed mainly up to the mountains.
- We produce the 1/3 of the Prefecture in meat and the 2/3 in milk and dairy products (maybe a little more)
- In the plains the breeding is concentrated in milk production and secondly in meat and up in the mountains is the opposite.

PYLI

Another point worth noting is that 75% of permanent residences grow their own vegetables and some fruit, breed a few chickens, even 2-3 sheep! And every Friday, there is an open farmers market where you may find where you can find fresh products and everything you possibly need.

The economically active population has been reduced during the last decade mainly due to the ageing of people, while the unemployment has rapidly been increased because of the economic crises, especially in the bigger villages.

Unfortunately most of the younger people do not wish to get involved with the primary production, even though they can have an easy access to the recourses needed.

During 2015 there was a Government Invitation for financial subsidy of new farmers and livestock breeders with the amount of 10.000,00 to 20.000,00 euros, and only 25 persons applied from our Municipality, because of the very strict regulations as they said.

Local economy and employment are mainly based in :

- agriculture
- livestock production in the mountainous areas of the region,
- Forest exploitation in the mountain areas with limited production of forest products.
- In the dynamic (lowlands) areas there are plenty small family industries as wood and wood products industries, furniture- manufacturing industries, one paper pulp, paper and paper products industry, two big dairy factories and some meat and vegetable processing products.

The majority of products are mainly available in local and national market, while the exports are limited.

The current situation is characterized by small agricultural holdings and allotments, lack of basic infrastructure and information regarding the mentioned sectors, small farm average size and low educational level of the farmers. Further more, is very typical the negative attitude of producers to create or join collective groups and cooperatives.

SWAT ANALYSIS

Advantages	Weaknesses
<ul style="list-style-type: none"> -Existence of important environmental reserves -Existence of aquatic reserves and ecosystems -Mountainous regions rich of forests -Big variety of fauna and flora -High value production of forest products -Existence of tourism that is connected with these regions -Abundance historical and cultural monuments -Very important Byzantine and post byzantine monuments -Correlation of these monuments with the local culture -Organization of many fairs and events in all almost the local apartments - Operation of ski center in Pertouli -Attraction of many visitors mainly at wintry mines -Increased tourist movement in a wider area -Important tourist infrastructure round the axis of Elati-Pertoyli -Existence of big number of appreciable tourist hotels -Sanitary enterprise interest that relates with the hotel infrastructures -Qualitative production of traditional food products -Climatic conditions that allow the production of quality products. -Existence of co-operative forms of production of traditional products. -Production of traditional products, as raki, sweets of spoon, sausages etc. - Located near in the urban center of Trikala - Road connection with Lake of Plastira -Road connection to Meteora 	<ul style="list-style-type: none"> -Unexploited and unprotected a big number of regions with natural beauty -Nonexistence of sufficient fire safety, forest road construction in many forests -Nonexistence of sufficient infrastructures in order to connected this regions with the tourist growth -Urbanisation and desolation of many areas - Population reduction of many villages - Ageing of population -Lack of new human resources -Abandon of many villages from the residents during the winter -Lower correspondence in new technologies and practical Insufficient tourist infrastructures except the axis of Elati-Pertouli -Absence in certain regions of tourist infrastructures -No road access to many beautiful areas - Regional road network with problems of safety -Promotion of tourist product only round the axis Elati-Pertouli -No connection of tourism sector with the primary and secondary production - Absence of supply chain -Nonsupport of local rural products -Small production of quality, traditional products -Lack of basic regional infrastructure - Absence of organized health infrastructures except city of Pyli - Absence of organized structures for tourist information - Serious problems at the wintry months -Road network requires maintenance and improvement

Strength	Threads
<ul style="list-style-type: none"> -Possibility of financing by investment programs, as PAA (OPAACH, Leader), the Developmental law. - Increase of private initiative and reduction of unemployment policy - European Union Policy for improvement of quality of life of rural areas -Visitors habits change to alternative forms of tourism. -Development of alternative forms for tourism, as agri-tourism, religious tourism, peripatetic etc. -Creation of special infrastructures of support -Possibility of trans municipality cooperation with common approach between Municipality of Mouzaki and Karditsa -Cooperation with other Municipalities 	<ul style="list-style-type: none"> -Competition from other markets -Existence of the same or similar tourist product in lower price -Weakness of competition because and better quality services for tourists in other areas -Meteora competence -Danger of failure to follow-up new technologies -Shrinkage of rural areas - Massive urbanization of rural population - Negative consequences from all the above in the sector of tourism -Devalorisation of natural environment - Hyper exploitation of many areas because the tourist abundance -No exploitation of regions that can constitute pole of attraction of tourists and visitors -Lack of professionalism in many enterprises -Sacrifice quality of services against their profit - Absence of education and training in many enterprises dealing with cultivation, or tourist services

Meteoraan advantage and a thread together for Pyli....

One of our main products in Pyli

Forestry

The Municipality manages 14 municipal forests of 233.123 acres and has rights in 19 public forests all placed in the mountains.

Up in the mountains things are very different. The climate and the landscape make it difficult to cultivate big areas. Except for the villages of Elati and Pertouli where the tourism blooms, people in the rest of the villages are mainly occupied with logging and wood production along with livestock. These factors are the only money source and between the two, logging comes first.

In the area are 7 small local wood partnerships and several private merchants. The main problem is that they don't work together and their cooperative power is very low. Furthermore, the Greek legislation is very difficult to handle on our own. The main products are Christmas trees, firewood, sawn wood, furniture, etc. The problems here are also the small family-type size of the enterprises and the lack of knowledge and innovation.

During the Agri-Urban action we manage to inspire them to focus on :

Forest Products Utilization and Sustainable Development

- Wood products vs their substitutes
- Based on LCA
- Wood products have favorable profiles
- Lower fossil fuel consumption

Strategies for a sustainable use of wood

- Sustainable forest management
- Sustainable use of non-wood forest products
- Wood and wood-based products
- Institutional framework

Manufacture and processing production

The secondary sector in the area is mainly characterized by small craft and industrial activity. Manufacturing activity in the region focuses on the exploitation, processing and utilization of products mainly for the production of wood products and furniture. The majority of businesses in the manufacturing sector belongs to the sectors of food craft. The other activities are linked to local needs, such as tailors, shoe shops, blacksmiths, carpenters, etc. The vast majority are small sized family businesses. The administration is done by family members themselves rather

PYLI

than professional managers. Because of their small size, they cannot achieve economies of scale which would make their products competitive both towards low labor cost countries products and the products of developed countries. A key element of manufacturing activity is self-employment and many times their existence is justified as a supplemental income.

3. City Local Support Group

The Local Support Group (LSG) in Pyli is basically a big number of agricultural small cultivators and forest associations together with the help of public sector authorities like Municipality of Pyli and Prefecture of Trikala. One of the most important member of LSG is the Technical University of Thessaly, the Department of Wood and Furniture Design and Technology that has joined the Local Support Group from the first moment of the project and the Department for Food and Nutrition.

So all the members try to help out for the Integrated Action Plan preparation in order to provide new ideas and solutions for all the problems that the Agri and Forest sector face in the area of Pyli.

Stakeholders interest analysis

For understanding the various interested participants

Primary Stakeholders

Stakeholders name	Issues of interest	Interests and how affected by the issue	Capacity and motivation to bring about change	Possible actions to address stakeholders interests
Pyli Agricultural Cultivators and food producers	During the economic crisis in Greece they manage to stay “alive” based mainly on the quality of their products, so they will try to keep the quality in high standards but also to assure all the above within the organic certification	Their main interest is to start dealing with the new way of cultivations. They will adapt all the necessary changes and they will start certificate their products in order to reach new markets.	The majority of the cultivators have small land areas but they are well trained.	This group of young people that are cultivating traditional products with their families are going to take some training about new products like stevia, or superfoods (Blackberry..etc.) in order to open new markets with better prices.

PYLI

Pyli Forest associations	Building construction are almost stopped during the economic crisis . The biggest amount of wood is now stored. They try to find an other area of products based on wood.	The main interest of the forest associations is how they will manage to find some wood products to sell in order to increase their income during this difficult period. They also try to find an other way for their legal entity because as forest associations they have to pay allot of money for taxes.	Their associations are between 10-15 people. It is very difficult for this size to stand in front of big wood industries and associations in Europe.	Under the guidance of the university and the municipality of Pyli they are ready to adapt a new legal entity.
Hotel owners	The local tourism start to decrease and the hotel owners start their movements to attract tourists from the European countries but they have different food needs (as certified organic food)	The hotel owners want to find , serve and promote local certified food as an attraction for their visitors	They have an association but it is not so active...!!	They wait from the food producers to cooperate with them ... win ..win situation
Municipality of Pyli	They want to help the agri-forest sector and they can do it	A healthy sector can provide with happy citizens and can afford more taxes	There are the strong stakeholders	Provide cultivators with new areas for farms in low rent prices
Prefecture of Trikala	They want to help the agri-forest sector and they can do it		There are the strong stakeholders	Provide with the necessary facilities and laws and allows the cultivators to start producing without barriers

Secondary Stakeholders				
Technological & Educational Institute (TEI) of Larissa	All the wood and non wood sectors from the forest as raw material till the production of finall product as packaging material etc.	The Technical University want always to help the sector that it deals with...	Well equipped and hight skilled personell in wood design and costructions from the forest to the end product	Share knowledge in wood and non wood products and Technology
Trikala Chamber of Commerce and Industry	The Chamber aims to enhance and enlarge the relations in the economic and business field, to promote the growth of food and wood products trade and investment and become a reliable business center for communities.	The chamber is committed in contributing for the stimulation of food wood and non wood products in Thessaly region		

The presentation of public and private sector people assure that we manage to collect ideas from all the stakeholders and they will help so that solution and ideas become real.

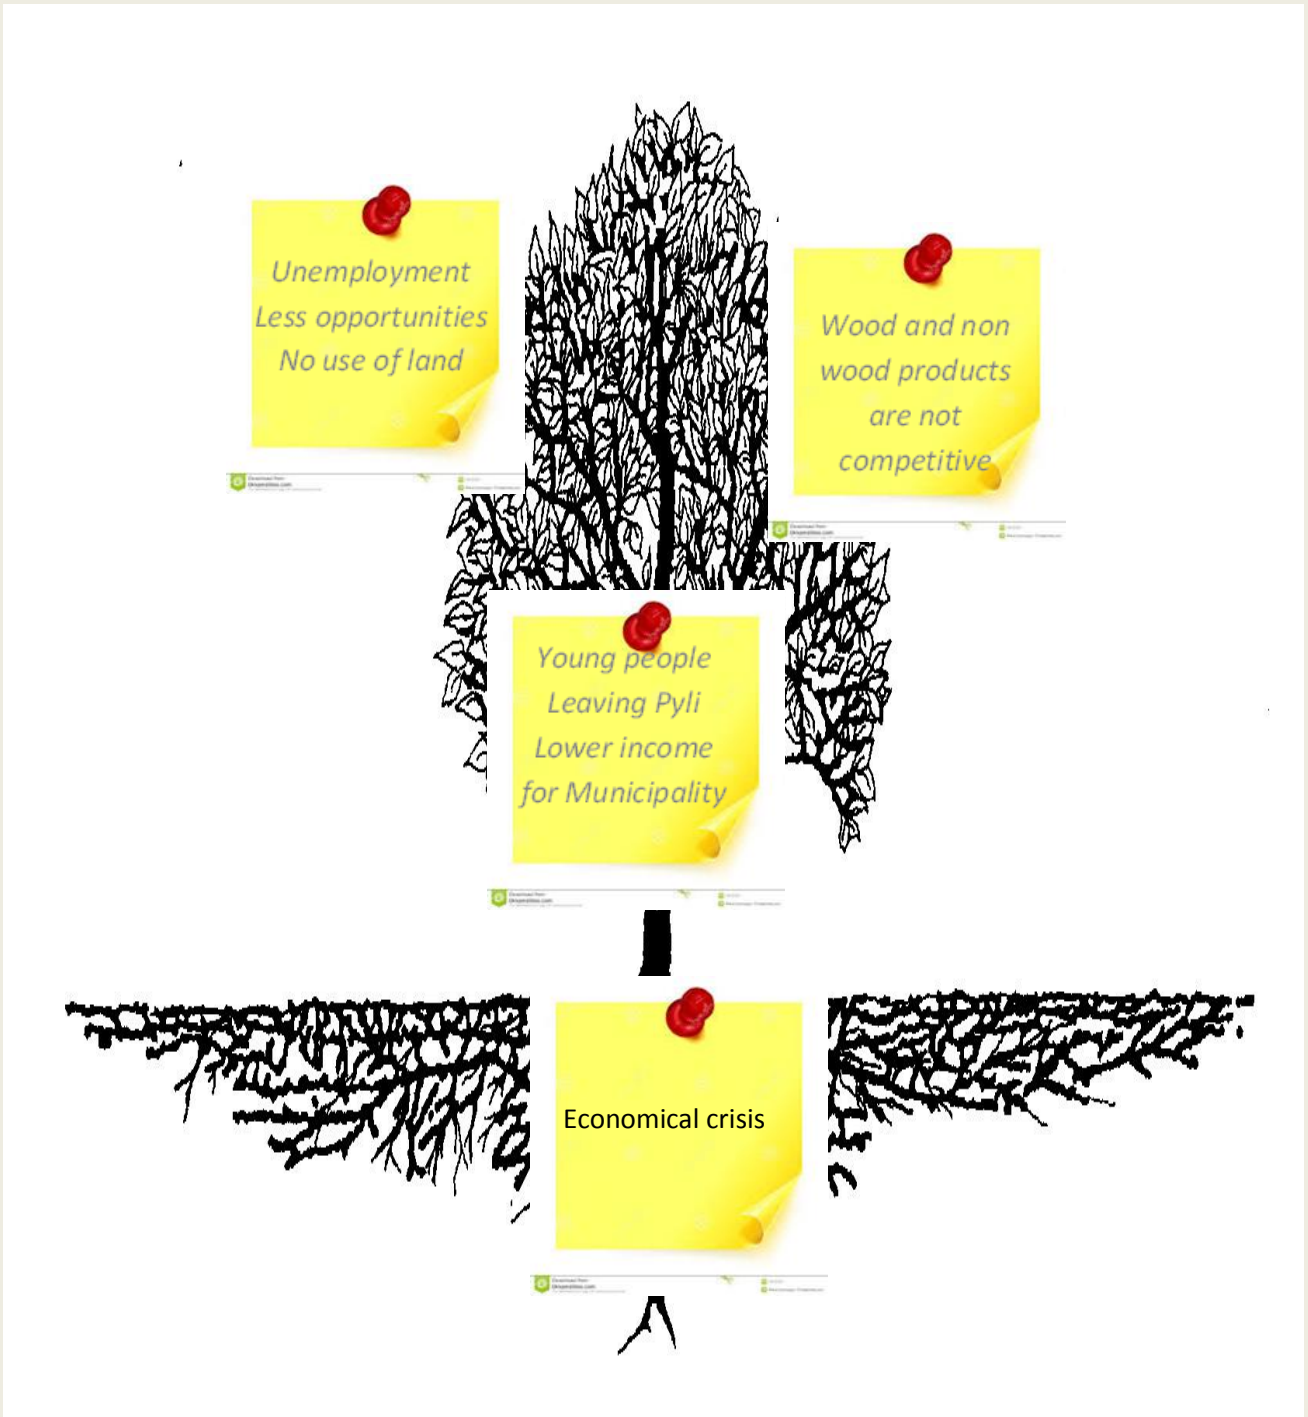

PYLI

	Level of Influence	

4. Identification of the problems

5. Thematic Groups Outcomes

Problems and Solutions tables		
Thematic Group:	Traditional products and their production problems.	
Problems	Solutions	Resources
<p><i>Old techniques – expensive raw materials</i> <i>The municipality of Pyli have a big number of food producers but they are small enterprises using the old traditional way of production. This makes their final products extremely expensive. On the other hand they are using raw material which is natural but they don't promote their products appropriate in order to sell them in higher prices.</i></p>	<p>Promote new techniques, inform the producers about new ways of products that they can produce with the same raw material.</p>	<p>After several meetings of the LSG with the experts of Technical University they manage to take the necessary information about new final products that they last more and they can sell them in higher prices.</p>
<p><i>Expensive energy consumption.</i> Another problem is that the mountainous areas have is that they need a lot of energy for heating. If we also consider that the price of petrol in Greece has risen to 1,2 euros per litre we can realise the extent of the problem.</p>	<p>Biomass.</p>	<p>Pyli is a place that cultivates corn, apples, vines etc and also they have big quantities of wood residues. All this products leave on the field big quantities of lignocellulose material which is ideal for heat production.</p>
Thematic Group:	Produce cheaper products. Another problem for the Agri and forest sector is that they have a big competition from other countries with very cheap prices. The only solution is to keep the quality but also to produce with lower prices.	
Problems	Solutions	Resources

Expensive raw material	Replace the traditional collecting ways of wood from the forest. Change the legal entity in new one in order to pay fewer taxes. New formulation of associations.	One of the traditional materials is the massive wood (Pine, beech or oak) for which the price is quite high, very difficult to store, big percentage of residues etc. New techniques of collecting wood from the forest make it cheaper.
Thematic Group:	Education	
Problems	Solutions	Resources
New techniques, new ways of food production, different types of promotion and needs more knowledge in order to use them	Short-term seminars during the evening	The Technical University which deals with wood, food and nutrition is located only 30 km away from Pyli. The departments is well equipped and with qualified personnel

6. Scope and Objective of IAP

The declining role of agriculture and traditional food industries represents a key challenge for Greece and in particular for Pyli. More important however, is the opportunity that these products (agri, forest, dairy) provide in the sense that they are already produced, ready for consumption with hi quality.

The Municipality of Pyli engage in supporting private sector to face the crisis by provide them with lower costs for cultivating, provide them with land whenever is necessary, organizing thematic exhibitions, especially in the food domain, transferring experience on better production processes as well as in ameliorating the design ability of local businesses, alongside with helping them to explore efficiently export opportunities and marketing techniques.

The scope of Integrated Action Plan must enhance economic development and create employment (especially in young people), either by reinforcing the main activity of agricultural, sector or by diversifying it into other sectors. The Municipality will cooperate with the local businesses through their associations, Chamber, so as to gather full and real information on every aspect of the problems of the sector. It also plans to look into the consequences of abandoned land on their close environment and bring up new ideas of tackling similar issues.

The municipality are planning to bring together food producers, with hotel owners major businesses of the sector that deal or used to deal with food production and consumption in Pyli area, similar businesses in other cities in order to exchange information on implemented solutions that can drive the sector out of the crisis putting it in an better position in the international market. The main goal will be, with the support of the Municipality, to enforce the businesses' presence in international exhibitions, marketing seminars etc.

The main ideas are

- Find mechanisms to support traditional producers to overcome their problems
- Support the defining of the strategies to find new markets for their products
- enhance economic development and create employment
- The Municipality of Pyli engages in supporting private sector to face the crisis.

7. IAP Key Actions

Action Table

Expected result/s					
Action name	Lead Actor	Key partners	Output	Timescale	Resoruces
1. Provoke the turn of the agri-food and forestry production to modern ways of high value and quality but still traditional products.	Municipality of Pyli	Technical university	Educational courses	Completed in 2019	Municipality of Pyli
2. Biomass.	LSG + Forest Associations	Biomass burn equipment constructors	Less expenses for the enterprises	Completed in pilot scale 2018	Biomass burn equipment constructors SES 2014-2020 Urbact III
3. Organize the producers to cooperative formations – Law 4384/2016.	Forest associations Municipality of Pyli	Technical University	More competitive products	Started already	SES 2014-2020 Urbact III Horizon 2020
4. Education	Technological University	Furniture industries	More efficient personnel	Always ON	SES 2014-2020
5. New products Promote eco-tourism as secondary activity	Hotel owners Local Cultivators	Technical University	Back in production!!!	Completed 2019	SES 2014-2020 Urbact III ERASMUS

Action 1	
Objectives	<i>Provoke the turn of the agri-food and forestry production to modern ways of high value and quality but still traditional products.</i>
Context	The municipality of Pyli have a big number of food producers but they are small enterprises using the old traditional way of production. This makes their final products extremely expensive. On the other hand they are using raw material which is natural but they don't promote their products appropriate in order to sell them in higher prices.
Operational actions	Municipality together with the Technical University have to persuade the producers to change some of the traditional ways of production. They will also try to give them with training some more information about the quality of their products together with the nutrition value in order to promote better their products to new markets with better prices.
Tools	Training courses, advertising
Involved Stakeholders	LAG, City council, Trikala Chamber of Commerce & Industry , Local producers
Resources	No need for extra resources
Time-frame	Completed in 2019
Expected outcomes	Cheaper products, more competitive enterprises.

A very good example for this situation is a small fish producer who have his fish farm at the mountain range of Pindos in central Greece, which is the biggest mountain range of the Greek peninsula (250 km long and 70 km wide) and supplies the 2/3 of the Greek population with water, is there the peak of the Athamanika Mountains (Tzoumerka). These mountains are famous for their rare beauty and ecological value and are protected by the protection network NATURA 2000.

Athamanika Mountains constitute of a group of beautiful villages and traditional settlements surrounded by gorges, canyons and steep mountains. The mountain terrain and the clear rivers of this area enchant the visitors, as they, at every step, intensively feel the

territory's tradition and history.

At the peak of the Athamanika Mountains (Kakarditsa 2,429 m.) there springs a stream called “Aspropotamos” (=white water), which owes its name to its very clear and rushing water. Aspropotamos supplies our “Athamania Fish Farm” with water, thus creating ideal conditions for the growing of quality fish.

The company “Athamania Fish Farm”, which has been operating since 2004 and is specialized in trout growing, is a family business. Its owner and production manager is George Kallos, agriculturist-pisciculturist.

Trout is a river fish (fresh water fish) and belongs to the family of Salmoids. It lives in clear running water, whose temperature falls to 3° C in the winter.

Within this project and with the help of Technical University Dept of Food and Nutrition will provide the producer with information about the nutrition value of trout in order to promote his production. So trout is a food of a very high nutritional value (protein, fat, vitamins A, B, D). It contains unsaturated fat and particularly fatty acids omega-3, which are used to the production of medication for reducing blood clotting and cholesterol and for the prevention of stroke.

“Athamania Fish Farm” manages to certified by ISO 22000 system of certification and food control.

Passion for the “gourmet” philosophy of life drove the enterprise to an eclectic taste research and the creation of a new product... smoked trout only with natural ingredients and without any chemical preservatives or other additives.

From now on his priority is the highest possible quality of his products, so that his consumers can enjoy a healthy live or with a new product “smoked fish” with

excellent flavor which last longer so they can reach more markets in bigger distances and provide them with a product , which is utmost beneficial for their cardiovascular system with its omega-3 fatty acids.

Action 2	
Objectives	Biomass use for thermal production
Context	Pyli is located in the centre of Greece and it is surrounded by cultivations of corn, apples but also with big quantities of forest remainings and other ligno cellulose materials that can be burned for thermal energy production
Operational actions	LAG have already started discussions mainly with the forest associations and with the cultivators in order to start collecting this useful materials and replacing the gasoline heat equipment they already have in their enterprises.
Tools	Establishment of a biomass chain
Involved Stakeholders	LAG, Forest associations, Technical University
Resources	SES 2014-2020 Urbact III
Time-frame	Completed in pilot scale 2018
Expected outcomes	Less expenses during the winter, more competitive enterprises, cheaper products, employment of workers for collecting and preparing the biofuels.

ACTION 2

Pyli is located in the Centre of Greece and as we can see on the map it is surrounded by fields that are cultivated all year round.

Map of Pyli

PYLI

Most of the area is cultivated with vines, corn, apples etc. After the harvesting of the main product, stalks are left on the ground which is a big amount of biomass ready for burning.

Vineyard cultivation

Corn cultivation

All this huge amount of biomass can be used in order to produce pellet with extremely low cost and by using the necessary equipment we can use it for the heating of their hoses or enterprises but also their greenhouses.

Considering the price of the gasoline/petrol this winter which was up to 1,2 euros/lt and the cost in order to produce the same heating energy from agrowaste will be less than 0,6 euros /lt we can understand that we will have 50 % less expenses.

One of the problems with this option can be the cost of the equipment that we need in order to burn the agrowaste material but we already start negotiations with the equipment constructors in order to provide the equipment for free if we sign a contract that the greenhouses will buy the agrowaste fuel for the next 7 years in a price equivalent to 60% of the gasoline energy.

Agro pellets burning devices

Action 3	
Objectives	Organize the producers to cooperative formations – <i>Law 4384/2016</i> .
Context	One of the main product in Mucipallity of Pyli is Wood products and in its biggest percentage solid wood, with the main species of wood from Pines, Fir, Oak and Beech. Solid wood is quite expensive and its use is very common in constructions but also as packaging material. The competition from other countries are become very strong and the forest associations try to find a solution. The legal entity of a Cooperative formation under the new legislation give them an opportunity.
Operational actions	Start a new legal entity as a KYNSEP
Tools	New legislation
Involved Stakeholders	LSG, Forest associations Technical University
Resources	SES 2014-2020 Urbact III Horizon 2020
Time-frame	Started already
Expected outcomes	More competitive associations , Cheaper products

ACTION 3

The forest associations are autonomous union of persons, which is constituted voluntarily and seeks economic, social and cultural growth of their members, with equivalent collaboration and reciprocal help. The forest associations till now are legal persons of private right and have commercial attribute. They are not compelled to register themselves in the Commercial

Chambers of country.

The forest associations are activated in the forest work and in the distribution, marketing, treatment and transformation of forest products. Forest work at the significance of present law is the cutting trees and the work of harvest, the work of resin collection and collection of in general secondary products as mushrooms etc from the forests, the plantings of forest types, rarefactions and the cleanings of forests, the protection and maintainance of forest ground, work for the protection and growth of vegetation and rebirth, work of prevention of forest fires, as well as each other activity for the service of aims of silviculture. For constitution of a forest association are required the syntax of statute and the signature from twenty one (21) at least persons, as well as the approval from the County court of seat of cooperative.

The forest associations are activated in the above forestry work provided that they fill the relative conditions that are set by special provisions.

So till now it was very difficult to work as free enterprises in order to have a bigger profit.

That's why the final products (mainly wood) have a big price which is very difficult to beat the competitors form different countries.

With the help of Pyli Municipality manage to find an other way in order to organized wood workers in a new cooperative formations

under the *Law 4384/2016* as a social enterprise which can from now on act jointly with other social cooperative formulation, with legal persons of public sector, with organisms beneficial to the public, co-operative organisations of other countries and with enterprises of organisms of local self-government.

They can act as a legal member and they can buy and sell wood or wood products as well as non wood as pine resin, mushrooms but mainly biomass.

Action 4	
Objectives	Education
Context	Knowledge is something that we always need. New European laws , new products , new techniques.
Operational actions	Seminars, Conferences, Visits to other countries
Involved Stakeholders	LSG, Technical University
Resources	SES 2014-2020 Urbact III
Time-frame	Already ON
Expected outcomes	More efficient personnel

Seminar for food products export techniques

Seminar about new agro legislation

Action 5	
Objectives	<i>New products</i> Promote eco-tourism as secondary activity by promoting eco local products
Context	Most of the Hotels are very well equipped but there is need for more tourism.... One of the ways to attract tourists is to promote different kind of tourism like... eco tourism with local food...
Operational actions	Seminars, Cooperation between Business - University
Tools	Brainstorming and in scale production
Involved Stakeholders	Hotel owners, Technical University
Resources	Hotel owners SES 2014-2020 Urbact III ERASMUS
Time-frame	Completed 2019
Expected outcomes	Start using their equipment and giving job again to unemployed people by starting the local food production

During the period of 2000-2005 allot of big hotels are built in the area due some European projects like LEADER etc.
 During the crisis period for most of them it is difficult even to stay “alive”...
 So they try to find different ways to atract more turism in the area...
 In this problem Municipality of Pyli try to help them by giving them a complex of tools.

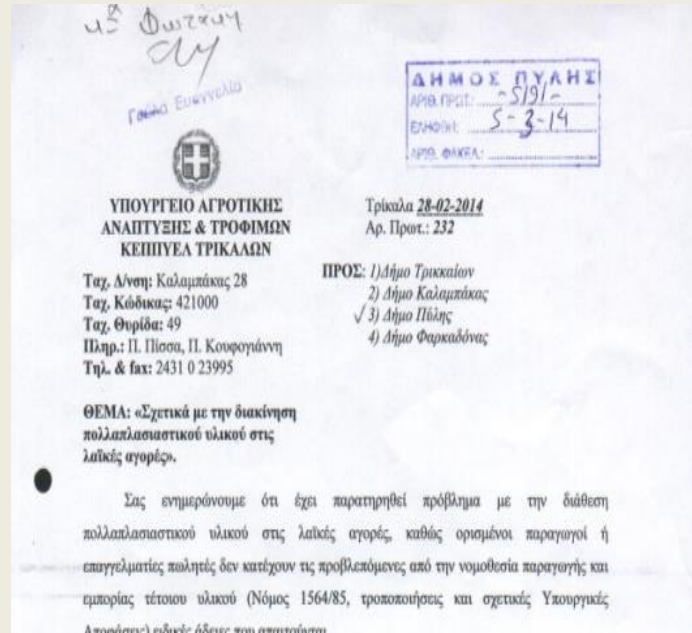

Access to information

There are different data bases made with information of our producers depending on the product – livestock, forestry, vegetables etc- This makes it very easy to contact them any time – even by mass sms and personalized messages - and work with them whenever it is needed. By the years, they have learned to trust us and we have an effective communication. Furthermore, every year we note all necessary information about the production and we can monitor changes or trends.

Legal Support

Because of the status of the Municipality there is an easy access to all new legislation so actions in order to inform the producers the best way possible are easy to do. Furthermore, there is a very good knowledge of the traditional way of cultivation for all local products and how they can be connected with the Mediterranean diet.

Public consultation

Each year the Municipality organize open meetings and seminars about new ways in production and legislation. During the last year, there were organized seminars about the new law for agrochemical use for 100 people. Along to these days there are 14 small traditional fairs with the Municipality as co-coordinator.

Municipal Structural Plans (PSC)

There are two Municipal Structural Plans (PSC) –one for the lowland and one for the higher region of Pyli, which provide an efficient system of planning and land use. Additional to these, the Forest Office provides special information about all the highlands and the forestry production and land use.

Tourism Marketing Plan

There is a recent long-term and an annual Tourism Marketing Plan and they are start seeking for funding. The highlands are well known to all Greece for the beautiful scenery, the pure and clean environment, the ski-center, the cultural monuments and nature's wealth. The Municipality provides an updated form about tourism in the area through the official site and it is free to the public and the people involved in tourism to have access.

From this multitask action Municipality of Pyli will try to help the development of the Agri-Economy sector, focusing on the mountainous areas of Pyli. Agri-Economy sector can provide important solutions with the traditional food products, for creating job opportunities and promoting social cohesion, which is threatened due to the adverse economic environment, by contributing to the preservation of the natural environment and the cultural heritage of Pyli area.

There must be an effort made in order to approach the local producers and provide them the elements to change the current and arise efficiently the local social dynamics and mechanisms which will play the central role for development. This can be reached by cooperation with the hotel owners in order to promote their products to their hosts.

This was adapted as a new idea from the visits to other Agriurban countries and we hope that we will manage to give a start up in our agriculture economy and create some new jobs for our young people..

8. Actions that we also hope to start...

Actions to be considered are:

- Increase local employment opportunities especially for young people on the production area by organizing open informative meetings on topics concerning the food production, the e-trade and new – alternative methods of production and persuade them to return to agri-food production with modern ways.
- Organize the producers to cooperative formations towards the production of local traditional products with improved modern factors and trade.
- Connect the local products with tourism and create marketing channels between the producers – the local tourist facilities – consumers/visitors
- Stimulate the home-production of processed agri-food and forestry products of local source and characteristics in marketable forms and establish them as PDO products under the name of “Pyli” – traditional healthy Mediterranean food basket

PYLI

- Inform the producers of all stages about the current legislation in food, forestry and local production and the opportunities given by the Rural Development Program of Greece 2014-2020 RDP and the CLLD Leader.
- Provoke the turn of the agri-food and forestry production to modern ways of high value and quality but still traditional products.
- Promote local entrepreneurships, one for each category of product – RDP 2014-2020 -M16 - Cooperation (Article 35) Horizontal and vertical cooperation, short chains and local markets and promotions
- Promote food tourism and connect it with the local fairs and festivals by using the media and sources from Leader program.
- Promote eco-tourism as secondary activity
- Promote forms of local cottage industries- especially for women and new farmers- based on the new L. 4384/2016 legislation
- Establish local products as PDO under the brandname of “Pyli” and promote “Pyli’s traditional food basket” based on Mediterranean diet.
- Organize a municipality office for strengthening the links between agriculture, food production, forestry and research and innovation, including improved target environmental management and efficiency RDP 2014-2020 M02 - Consulting services, farm management and replacement services
- Educate farmers on on-line trading, new market technologies and innovation through municipality mechanisms, seminars and meetings based on the RDP 2014-2020 M01 - knowledge and information transmission actions (Article 14)
- Finally the aim of a corporation of urban-rural, civil cohesion, economy growth and sustainability with respect to the environment, the cultural heritage and the human need for healthy and quality products are our major priorities.
- Promote local entrepreneurships, one for each category of product – RDP 2014-2020 -M16 - Cooperation (Article 35) Horizontal and vertical cooperation, short chains and local markets and promotions
- Organize the producers to cooperative formations – Law 4384/2016.
- Connect the local products with local and regional tourism and create marketing channels between the producers – the local tourist facilities – consumers/visitors. New farmer’s market
- Promote food tourism and connect it with the local fairs and festivals by using the media and sources from Leader program.

9. Financial Resources

The PEP Thessaly for period 2014-2020 Was approved by the European Committee

Kostas Agorastos: “This Program is for all Thessalians”

“Was worked bottom - up on the logic of collective leadership, and that’s why and it will be successful.”

The program was signed by the responsible Delegates of Regional Policy and Social Affairs Regional Operational Program (PEP) Thessaly of new Programmatic Period 2014-2020. The two Delegates approved the total of Programs that were submitted from the country and is partly-financed by the European Fund of Regional Growth (ETPA), the European Social Fund and the Fund of Cohesion (T.S.).

The governor of Thessaly Mr. Kostas Agorastos expressed his satisfaction on this outcome, marking the following: “Our Objective with the new ESPA, that is to say the SES, is a new beginning that is exploitation of Community resources and change of productive model, the reinforcement of developmental potentials and the improvement of competitiveness of economy. Basic objective is to finance projects that will promote the competitiveness, the innovation and the extraversion of enterprises of Thessaly, including those of primary sector. The resources of new ESPA will be used mainly to promote the qualitative business dexterity, and especially the innovation and increase of domestic added value, the diminishing of poverty and unemployment and the improvement of productivity the rural and veterinary surgeon sector. In order to advance these approvals, coordinated and hard work was required the last weeks by the Greek authorities along with the cooperation of other Ministries, the Regions, and the services of European Committee.

Referring to the structure of Program Mr. Agorastos marked the following: The program is well structured, as it has resources both from the Social and Agricultural fund, because it is a result of thorough and continuous consultation of all institutions and sectors, it acts cooperatively with the Sectoral Programs and their concern in Thessaly, but also because it took into consideration the strategy of Intelligent Specialisation that was worked out and approved by the Region. This way a complete strategy is ensured. The program of Thessaly of 2014-2020 is for all Thessalians. In this Program the needs of Thessaly were incorporated as well as possible, since a wide consultation at all levels has resulted in the creation of different approaches of choices of growth of Thessaly. It was worked out from the bottom- upwards to on the logic of collective leadership, that’s why it will be successful.

In order to perceive the size of success of Region Thessaly, Ministry of Growth and Greek Government, it should be taken into consideration the fact that up to day before yesterday the Committee had approved less than the 1/5 of roughly 300 programs that had been submitted by the Regions of European Union.

It is underlined that with the convenient approval the promotion of high quality of programs is ensured, that gives access to the achievement of objectives of Political Cohesion and Strategy Europe 2020 and at extension in the growth and the creation of hundreds of thousands new jobs.

Simultaneously, the voting by the Greek Parliament, the applicable law on the management of resources of new ESPA, means that the country is ready to receive and to

develop the resources of new Programmatic Period 2014 -2020.

The PEP Thessaly 2014 - 2020 receive co-financing in percentage 80% from the European Fund of Regional Growth (E.T.P.A.) and European Social Fund (ESF). Its total budget comes to 401.130.674 Euros public expense, from which a sum of 320.904.539 Euros comes from the Community funding. In the sum of Community subscription the ESF. it contributes with sum 57.094.659 Euros and the E.T.P.A. with sum 263.809.880 Euros. In this sum it should be also added the resources granted by the Agricultural Fund.

The strategic Objectives of PEP are:

- Interception of shrinkage the enterprising and in general productive activity and intensification of attractiveness of competitiveness and extraversion of Region and her enterprises.
- Growth, exploitation and increase of attendance of human resources in the job market and active integration and social incorporation.
- Growth and networking of inquiring web of Region and its connection with the productive/enterprising environment and the public administration of Region.
- Implementation- completion of conservable and safe transport infrastructures for the growth and the employment.
- Protection of environment and resources and passage to an environmentally friendly economy, for the confrontation of climatic change and the efficient use of resources.
- Application of programs of territorial growth for the increase of employment and confrontation of phenomena of social exclusion in the frame of territorial cohesion of subareas of Thessaly.

Structure PEP Thessaly:

The program is structured in six (6) Axes. From these, Axes 1, 2b, 3, 4 and 5 are part-financed by the E.T.P.A. , while the Axes 2nd and 6 from the ESF. The axes concisely cover 10 “Thematic Objectives”, that are:

- Aid of research, technological growth and innovation
- Improvement of access, use and quality of technologies of information and communications
- Improvement of competitiveness of small to medium-sized enterprises
- Support of passage to an economy of low emissions of dioxide of coal in the all sectors
- Promotion of adaptation in the climatic change, prevention and management of dangers
- Maintenance and protection of environment and promotion of efficiency of resources
- Promotion of viable transports and eliminationof problems in basic infrastructures of networks
- Promotion of the viable and qualitative employment and support of mobility of work
- Promotion of social integration and fighting of poverty and discriminations
- Investment in the education, the training and the professional training for the acquisition of dexterities and for life learning. The sectors which will be on top priority and are expected to play the most important role in the economic growth are industry, tourism, energy and agri-foodstuff system.

Other sectors with ascendant course, as the research and the technological growth, the aquacultures, the specialised services of health, the creative exploitation of cultural heritage and the modern Greek creation, the pharmaceutical industry, the information technology and the communications, the management of litter, the trade and the services of merchandising transports, are also sought to play a distinct role in growth. Similarly, education and permanent training constitute tools of transport and diffusion of knowledge and dexterities, adaptation in the requirements of international competition

and permanent upgrading of human resources. Finally, an effective and efficient public administration, based on the new technologies of information technology and communications, will support, in an important degree, the passage of Greek economy to the new developmental model.

DEVELOPMENTAL LAW 2017

Possibility of Issuing of advance of subsidy via guaranteeing letters in the frame of laws 3299/2004 and 3908/2011

In application of provisions of paragraph. 1 the article of 18 N. 4146/2013 (A 90) and afterwards the publication of PD 158/2013 (A 250), are provided the possibility of advance of percentage up to 100% of corresponding subsidy of investment with the producing of guaranteeing letter equal in amount overloaded at 10% on the investments that they have been taken in the provisions of N. 3299/2004 (A 261) and 3908/2011 (A 8).

They are informed all interested that wishes they make use of above-mentioned beneficial provision, that General management of Private Investments is able it serves relative demands inside the year, provided that these are submitted until 23 December 2013.

Step here for the statement and the model text of guaranteeing letter.

Investment Law: Fluidity - Speed - Transparency

Investment Law aims in the increase of fluidity, the acceleration of investment processes and the guarantee of transparency.

The investment Law provides in the investors a effective institutional frame and accelerates the processes of approval of investment drawings.

The law Configuration of Friendly Developmental Environment on the Strategic and Private Investments and other provisions (N. 4146/2013) it aims at the modernisation and the improvement of institutional frame of private investments, that depends in investment laws. Are thus imported provisions that concern in:

A) Benefit of fluidity and Acceleration of processes of subsidy of investments:

1. Is strengthened the fluidity of investors with the possibility of advance up to 100% of subsidy with cover of guaranteeing letter
2. Is released the choice of mix of benefits of Investment Law (exemptions, subsidy Mr a.) on investments under Euro 50 millions, so that is strengthened the flexibility of financing for Small and Intermediate investors
3. Is allowed the emprosthoraris use of exemptions, so that are strengthened the fluidity of enterprises and their viability
4. Is provided in the institutions of investment, the possibility of cover of same attendance and with immediately convert to money constant elements of enterprise the
5. Are extended the strengthening sectors of business dexterity
6. Is suppressed the time restriction of submission of investment drawings (each April and October) and is provided possibility of submission of investment drawings during the all duration of year.

Mediator of Investor

The Organism Invest in Greece (You invest in Greece HM) and the Directing Adviser Mr. Stefanos Isaias, they today presented in interview of Press the assessment of first six months of pilot operation of service the Mediator of Investor.

The service of Mediator of Investor was enacted and she began her operation in April 2013, in order to it contributes in the disengagement and facilitation of concretisation of investment drawings.

It is offered in the investors without no debit, provided that the interested investor formulates special demand in Invest in Greece, with regard to a existing problem that faces with the public administration, by referring a investment drawing ano two millions (2.000.000) Euro.

The interview of Press for the six-monthly assessment of action opened the Undersecretary of Growth and Competitiveness, Mr. Notis Mitarakis addressing a short greeting, in which it pointed out inter alia that... my Basic conviction is that with the vision and with the import of new initiatives it should exists also their follow-up.

Because if something you cannot measurements be possible also administrations. Our objective with this new institution was also remains we stand next to the one that for us constitutes motive force of real economy, in the Private individual of Investor: Helpers, Supporters, his Mediators in his relation with the Public Sector. Him allocate one still high tool in order to him we support in his efforts.
