PASSAGE project

*Public Authorities Supporting low-carbon
Growth in European maritime border regions*

PASSAGE is a
cooperation
project involving
11 partners from
8 countries and 5
maritime borders.

Carbon emissions generated by human activity definitely contribute to climate change. At the heart of maritime border regions, straits concentrate maritime and logistics flows, port operations and related industries that leave a particularly large carbon footprint. The aim of PASSAGE project is to reduce the consequences of such flows and activities on climate change by promoting low-carbon initiatives and cross-border cooperation within maritime borders so as to take full advantage of the opportunities linked to low-carbon development and "blue" growth. The long-term competitiveness of the straits depends on it.

PASSAGE project is co-funded by the European Regional Development Fund (ERDF) within the framework of the Interreg Europe cooperation programme.
