WARMTENETWERK

meer comfort met minder fossiele energie

Het kan echt zonder aardgas!

Klaas de Jong AVR Duiven

Stockholm area: modern metropole of 1.8 million inhabitants without natural gas grid

District heating started in Sweden in 1955

TWh/year

1940 1945 1950 1955 1960 1965 1970 1975 1980 1985 1990 1995 2000 2005 2010

Fossile fuels in Swedish district heating

Source: Statistics Sweden and the Swedish Energy Agency

In one step from gas CHP to renewable heat

- Warmtenet Purmerend changed over from gas fired cogeneration to biomass plant
- 75% of houses in Purmerend have renewable heat since this change-over

district heating in Pijnacker combines greenhouses, public buildings and houses

Geothermal heat for greenhouses, school, swimming pool and 470 apartments in Pijnacker

Owner and operator of the heat grid is Ammerlaan TGI

City of Dordrecht: gas grid out – heat grid in

Heat source Waste-to-energy plant HVC

Also steam for industry

Dordrecht and Pijnacker are part of integral heat plan of province Zuid-Holland

Village Marum: small scale district heat

Around village meadows with 1,200 km of wooded banks Wood chips no longer waste but heat source for village Connected buildings for 99% renewable heat

Biogas for district heat in Zeewolde CHP better than upgrading biogas for gas grid

meer comfort met minder fossiele energie

'Open' heating grids

Fortum Stockholm pilot projects with supermarkets and data centres under the supermarkets and data centres

We buy excess heat at market value

District heat drives heat pump for shallow geothermal energy in City Hall of Viborg (DK)

Adsorption heat pump

Heating grid balances electricity grid

Ausgleich schwankendes Angebot Windenergie in KWK

Hoofddoelen van de stichting Warmtenetwerk

- Verminderen van gebruik fossiele energie voor verwarmen en koelen
- Stimuleren van gebruik van restwarmte
- Stimuleren gebruik van duurzame warmte en koude in collectieve netten
- Kennisoverdracht en samenwerking door studiereizen, congressen, etc.
