HAZARD REPORT

METHODS FOR IDENTIFYING THREATS OF CRITICAL INFRASTRUCTURE SYSTEMS WITHIN BALTIC SEA REGION

PRESENTATION AT HAZARD WORKSHOP ORGANIZED BY PSRA ON 15.02.2019 IN GDYNIA

Project Partner: Polish Safety and Reliability Association (PL)

Research Team Leader: Tchórzewska-Cieślak Barbara

***Research Team: Tchórzewska-Cieślak Barbara,
Pietrucha-Urbanik Katarzyna, Szpak Dawid***

CONTENTS

1. Introduction
2. Hazard identification
3. Strategies for safety management in terms of identification of operating states
4. Types of undesirable events
5. Risk connected with critical infrastructure operation within the Baltic Sea
6. Registration of undesirable events
7. Matrix methods for risk assessment
8. Description of the logical trees methods

CONTENTS

9. Development of cause-effect dependence model of undesirable events using Bayes network
10. Example of application - analysis of the risk of interference in the functioning of the seaport using Bayesian networks
11. The use of the FMEA method to analyze the risk of failure in technical system
12. Example of application - the use of the FMEA method to analyze the functioning of the seaport
13. Conclusions

References

THANKS!
