Energy Efficiency in Renovating Public Premises

Energy efficiency plays an increasingly important role in the renovation of public buildings; This is mainly addressed to the public sector by the project "REBUS - RENovation for Energy efficient BUildings" financed by the European Union's INTERREG EUROPE 2014-2020 Program, which will be implemented between 2016-2021 in Italian, Greek, English, German, Romanian, Polish and Hungarian regions and local organizations. The Energiaklub participates in the project as an expert.

he project announced by BORA 94 Nonprofit Ltd. aims to identify and take good examples through good practice exchanges with partners, which will enable the Structural Funds and other local sources of funding to be used more efficiently in the coming period.

In the REBUS project, following the analysis of local conditions, the collection and analysis of good examples and their potential receipt are identified through seven action plans, among the leading and less developed regions in the field of energy efficiency.
