

HOW TO MAKE SOCIAL HOUSING MORE ENERGY EFFICIENT AND AFFORDABLE IN MUNICIPALITIES AND REGIONS?

Social Green is an **EU-funded project** with members in 8 municipalities in 6 EU countries. We are working towards finding **good solutions and policies on how to make social housing sector more green** through mutual learning and development of improved regional policies. It provides the opportunity to explore green building practices and significantly **reduce GHG emissions** through cost-effective means while providing much needed housing in a healthy and sustainable manner.

Social Green project started in October 2016 and will continue until 2020. **We wish to provide you with concrete tools on how to work with social housing retrofitting projects in a municipality.** Our newsletters have the aim to report on Social Green project, its results, products and any other useful information on the improvement of the energy efficient in Social Housing.
