### **ARISTOIL training and seminar questionnaire for beneficiaries, aims and structure**

A questionnaire has been created by the partners of the project Interreg MED ARISTOIL project to gain insight into the opinions of beneficiaries concerning the project and more specifically their evaluation of the training events (trainings and seminars), which aim to train current and prospective ARISTOIL cluster members. The questionnaire is designed to provide us with feedback and suggestions that may help improve the structure and content of the remaining ARISTOIL events, as well as that of the cluster.

The questionnaire is anonymous, although identifies each stakeholder in terms of their capacity, as a beneficiary (e.g. olive oil producer, olive oil miller) and simple attendee of the events (e.g. representative of local public authority/regional authority/national authority, a student, an academic, a journalist, a consumer), so that we can separately analyse the results. The second part of the questionnaire gives participants an opportunity to evaluate the ARISTOIL event(/s), which they have attended, as well as the promotional and informative communication material distributed. A third part concerns the ARISTOIL cluster and aims to offer an insight into how beneficiaries and other groups understand the concept of the cluster and what they hope to gain from participating in it. Finally, a series of questions aim to provide feedback on the effectiveness of ARISTOIL communication tools and strategies.

Most of the questions give participants the opportunity to express their opinions freely and thus express their individual experiences of how they have interacted and/or benefited from the project. With the project approaching its completion and the ARISTOIL cluster, becoming gradually the entity, which will grand its continuation, cluster current and prospective participants primarily, but also other groups, are offered an opportunity to provide us with their suggestions and contribute to its structure at these initial stages.

The analysis of all completed questionnaires will be based on a descriptive analytical approach, grouping questions through a qualitative content-related approach. Key-words for each question will be defined, based on a frequency index and they will be analysed, based on the context.
