

## 3.4.3 – Regional CESBA MED SNTs

### URBAN SCALE

**Version 1.1**

**Date: March 2019**

2.1: To raise capacity for better management of energy in public buildings at transnational level

Work package: WP3 TESTING

Activity: 3.4 Evaluation of test results

Deliverable: 3.4.3 – Regional CESBA MED SNTs

**Responsible Partner:** Andrea Moro, iiSBE Italia R&D

## Index

D.3.4.3 Regional Tool – City of Turin .....	3.
D.3.4.3 Regional Tool – City of Udine .....	28.
D.3.4.3 Regional Tool – EnvirobatBDM .....	48.
D.3.4.3 Regional Tool – AURA-EE .....	66.
D.3.4.3 Regional Tool – GENCAT .....	85.
D.3.4.3 Regional Tool – SANT CUGAT .....	101.
D.3.4.3 Regional Tool – University of Malta .....	143.
D.3.4.3 Regional Tool – NOA .....	182.
D.3.4.3 Regional Tool – EIHP .....	225.
<b>COMPARATIVE ANALYSIS</b> .....	245.
Total number of criteria calculated .....	246.
Number of criteria per area .....	247.
Average value of Priority factors per KPIs .....	249.
Weight per area .....	251.
Average value of Minimum/Best value .....	253.
Standard for calculation .....	257.
KPIs value .....	259.
KPIs score .....	260.

# REGIONAL TOOL

## D.3.4.3 Regional Tool - TORINO

Version 1.1

Date: March 2019

2.1: To raise capacity for better management of energy in public buildings at transnational level

Work package: WP3 TESTING

Activity: 3.4 Evaluation of test results

Deliverable: 3.4.3 – Regional CESBA MED SNTs

**Responsible Partner:** Andrea Moro, iiSBE Italia R&D

# URBAN SCALE ASSESSMENT

## SNTool structure

A- BUILT URBAN SYSTEMS	
<b>A1</b>	<b>Urban structure and form</b>
A1.2	<i>Urban compactness</i>
A1.7	<i>Conservation of land</i>
<b>A2</b>	<b>Transportation infrastructure</b>
A2.1	<i>Walking distance to public transport for area residents</i>
A2.4	<i>Extent and connectivity of bicycle paths separated from vehicular traffic.</i>
B- ECONOMY	
<b>B2</b>	<b>Economic activity</b>
B2.2	<i>Average Annual per-capita income of residents</i>
<b>B3</b>	<b>Cost and investments</b>
B3.3	<i>Operating energy costs for public buildings.</i>
C- ENERGY	
<b>C1</b>	<b>Non-renewable energy</b>
C1.1	<i>Total final thermal energy consumption for building operations.</i>
C1.2	<i>Total final thermal energy consumption for residential building operations.</i>
C1.3	<i>Total final thermal energy consumption for non residential building operations.</i>
C1.4	<i>Total final electrical energy consumption for building operations</i>
C1.5	<i>Total final electrical energy consumption for residential building operations.</i>
C1.6	<i>Total final electrical energy consumption for non residential building operations.</i>
C1.7	<i>Total primary energy demand for building operations</i>
C1.20	<i>Energy consumption for public lightning</i>
<b>C2</b>	<b>Renewable and Decarbonised energy</b>

<b>C2.1</b>	<i>Share of renewable energy on-site, on total final energy consumptions for buildings operation</i>
<b>C2.4</b>	<i>Share of renewable energy on-site, on total primary energy consumptions for buildings operation.</i>
<b>C2.7</b>	<i>Share of electric energy generation from on-site renewable sources on final electric energy</i>
<b>C2.8</b>	<i>Aggregated electrical energy generation from renewable sources located on public properties</i>

## D- ATMOSPHERIC EMISSIONS

### D1 Atmospheric emissions

**D1.2** *GHG emissions from energy used for all purposes in building operations*

## E- NON RENEWABLE RESOURCES

### E1 Potable water, stormwater and grey water

**E1.6** *Consumption of potable water for residential population*

**E.1.7** *Consumption of potable water for non residential building systems*

### E2 Solid and liquid wastes

**E2.1** *Solid waste and recycling collection points*

**E2.2** *Separate collection and disposal of solid waste and recycling*

## F- ENVIRONMENT

### F1 Environmental impacts

**F1.3** *Recharge of groundwater through permeable paving or landscaping.*

### F2 Outdoor environmental quality

**F2.1** *Ambient air quality with respect to particulates <2.5 µm (PM2.5) over a one-year period.*

**F2.3** *Ambient air quality with respect to particulates <10 µm (PM10) over a one-year period*

### F3 Ecosystems and landscapes

**F3.1** *Green zones & recreation areas availability*

## G- SOCIAL ASPECTS

### G2 Traffic and mobility Services

**G2.1** *Performance of the public transport service*

G2.4	Quality of pedestrian and bicycle network
<b>G4</b>	<b>Public and private facilities and services</b>
	Availability and proximity of key public human services
G4.2	Availability and proximity of a primary school
G4.3	Availability and proximity of a secondary school
G.4.4	
G4.5	Availability and proximity of childrens' play facilities

## SNTool criteria selection rationale

A- BUILT URBAN SYSTEMS		REASONS/MOTIVATION
<b>A1</b>	<b>Urban structure an form</b>	
A1.2	Urban compactness	It is an indicator used in Urban planning
A1.7	<b>Conservation of land</b>	<b>It gives the indication of the soil consumption</b>
<b>A2</b>	<b>Transportation infrastructure</b>	
A2.1	Walking distance to public transport for area residents	Support to sustainable mobility policies
A2.4	Extent and connectivity of bicycle paths separated from vehicular traffic.	Support to sustainable mobility policies

B- ECONOMY		
<b>B2</b>	<b>Economic activity</b>	
B2.2	Average Annual per-capita income of residents	Support to social and welfare policies
<b>B3</b>	<b>Cost and investments</b>	
B3.3	Operating energy costs for public buildings.	Rationalization of municipal expenditure

C- ENERGY		
<b>C1</b>	<b>Non-renewable energy</b>	
C1.1	Total final thermal energy consumption for building operations.	Achievement of the objectives set by the covenant of Mayors
C1.2	Total final thermal energy consumption for residential building operations.	Achievement of the objectives set by the covenant of Mayors
C1.3	Total final thermal energy consumption for non residential building operations.	Achievement of the objectives set by the covenant of Mayors
C1.4	Total final electrical energy consumption for	Achievement of the objectives set by the

	<i>building operations</i>	<i>covenant of Mayors</i>
<b>C1.5</b>	<i>Total final electrical energy consumption for residential building operations.</i>	<i>Achievement of the objectives set by the covenant of Mayors</i>
<b>C1.6</b>	<i>Total final electrical energy consumption for non residential building operations.</i>	<i>Achievement of the objectives set by the covenant of Mayors</i>
<b>C1.7</b>	<i>Total primary energy demand for building operations</i>	<i>Achievement of the objectives set by the covenant of Mayors</i>
<b>C1.20</b>	<i>Energy consumption for public lightening</i>	<i>Achievement of the objectives set by the covenant of Mayors</i>
<b>C2</b>	<b>Renewable and Decarbonised energy</b>	
<b>C2.1</b>	<i>Share of renewable energy on-site, on total final energy consumptions for buildings operation</i>	<i>Achievement of the objectives set by the covenant of Mayors/burden sharing</i>
<b>C2.4</b>	<i>Share of renewable energy on-site, on total primary energy consumptions for buildings operation.</i>	<i>Achievement of the objectives set by the covenant of Mayors/burden sharing</i>
<b>C2.7</b>	<i>Share of electric energy generation from on-site renewable sources on final electric energy</i>	<i>Achievement of the objectives set by the covenant of Mayors/burden sharing</i>
<b>C2.8</b>	<i>Aggregated electrical energy generation from renewable sources located on public properties</i>	<i>Achievement of the objectives set by the covenant of Mayors/burden sharing</i>

## D- ATMOSPHERIC EMISSIONS

<b>D1</b>	<b>Atmospheric emissions</b>	
<b>D1.2</b>	<i>GHG emissions from energy used for all purposes in building operations</i>	<i>Achievement of the objectives set by the covenant of Mayors/EU targets</i>

## E- NON RENEWABLE RESOURCES

<b>E1</b>	<b>Potable water, stormwater and grey water</b>	
<b>E1.6</b>	<i>Consumption of potable water for residential population and non residential building systems</i>	<i>Support to sustainable consumption policies</i>
<b>E.1.7</b>	<i>Consumption of potable water for public non residential building systems</i>	<i>Support to sustainable consumption policies</i>
<b>E2</b>	<b>Solid and liquid wastes</b>	
<b>E2.1</b>	<i>Solid waste and recycling collection points</i>	<i>Support to waste management policies; consistency with the regional waste management plan</i>
<b>E2.2</b>	<i>Separate collection and disposal of solid waste and recycling</i>	<i>Support to waste management policies; consistency with the regional waste management plan</i>

## F- ENVIRONMENT

<b>F1</b>	<b>Environmental impacts</b>	
<b>F1.3</b>	<i>Recharge of groundwater through permeable paving or landscaping.</i>	<i>Support to urban development policies; consistency with the draft revision of the general regulation plan (P.R.G.) of the City</i>

F2 Outdoor environmental quality		
F2.1	Ambient air quality with respect to particulates <2.5 mu (PM2.5) over a one-year period.	Support to public health policies/EU target; Support to urban development policies; consistency with the draft revision of the general regulation plan (P.R.G.) of the City
F2.3	Ambient air quality with respect to particulates <10 mu (PM10) over a one-year period	Support to public health policies/EU target Support to urban development policies; consistency with the draft revision of the general regulation plan (P.R.G.) of the City
F3 Ecosystems and landscapes		
F3.1	Green zones & recreation areas availability	Support to urban development policies; consistency with the draft revision of the general regulation plan (P.R.G.) of the City
G- SOCIAL ASPECTS		
G2 Traffic and mobility Services		
G2.1	Performance of the public transport service	Support to sustainable mobility policies consistency with the draft revision of the general regulation plan (P.R.G.) of the City and with the Urban sustainable mobility plan
G2.4	Quality of pedestrian and bicycle network	Support to sustainable mobility policies consistency with the draft revision of the general regulation plan (P.R.G.) of the City and with the Urban sustainable mobility plan
G4 Public and private facilities and services		
G4.2	Availability and proximity of key public human services	Support to sustainable mobility policies consistency with the draft revision of the general regulation plan (P.R.G.) of the City
G4.3	Availability and proximity of a primary school	Support to sustainable mobility policies consistency with the draft revision of the general regulation plan (P.R.G.) of the City
G4.4	Availability and proximity of a secondary school	Support to sustainable mobility policies consistency with the draft revision of the general regulation plan (P.R.G.) of the City
G4.5	Availability and proximity of childrens' play facilities	Support to sustainable mobility policies consistency with the draft revision of the general regulation plan (P.R.G.) of the City

## SNTool weights rationale

### ISSUES WEIGHTS

ISSUE	WEIGHTING FACTOR (1 to 3)	MOTIVATION
A- BUILT URBAN SYSTEMS	3	The Municipality considers Sustainable Urban Planning very relevant. <i>Consistency with the draft revision of the general regulation plan (P.R.G.) of the City</i>
B- ECONOMY	1	
C- ENERGY	3	The Municipality considers Sustainable Urban Planning very relevant  <i>Consistency with the draft revision of the general regulation plan (P.R.G.) of the City</i>
D- ATMOSPHERIC EMISSIONS	3	The Municipality considers local impacts very relevant <i>Consistency with the draft revision of the general regulation plan (P.R.G.) of the City</i>
E- NON - RENEWABLE RESOURCES	2	Good practices of sustainable consumption are relevant for the Municipality
F- ENVIRONMENT	3	Sustainable Urban Planning and health policies are a priority for the Municipality  <i>Consistency with the draft revision of the general regulation plan (P.R.G.) of the City</i>
G- SOCIAL ASPECTS	3	

### CATEGORIES WEIGHTS

CATEGORIES	WEIGHT (%)
A1- Urban Structure and Form	8,3
A2- Transportation Infrastructure	3,3
TOTAL	11,6
B1- Economic Structure and Value	0
B2- Economic activity	0,6
B3- Cost and Investment	1,1
TOTAL	1,7
C1- Non-renewable energy	28,7
C2- Renewable and Decarbonised energy	12,5
C3- Energy recycling and storage	0
TOTAL	41,1
D1- Atmospheric emissions	6,9
TOTAL	6,9

E1- Potable water, stormwater and greywater	2,5
E2- Solid and Liquid Wastes	4,4
E3- Resource consumption, retention and maintenance	0
<b>TOTAL</b>	<b>6,9</b>
F1- Environmental impacts	5,5
F2- Outdoor environmental quality	11,1
F3- Ecosystems and landscapes	1,7
<b>TOTAL</b>	<b>18,3</b>
G1- Safety and Accessibility	0
G2- Traffic and Mobility Services	3,7
G3- Communication services	0

## SNTool benchmarks rationale

### A- URBAN STRUCTURE AND FORM

CRITERION	INDICATOR	UNIT OF MEASURE	BENCHMARK	RATIONALE
A1.2	(see table in SNTool criteria selection rationale)	m <sup>3</sup> /m <sup>2</sup>	0: 14	Technical evaluation of municipal offices
			5: 18	Technical evaluation of municipal offices
A1.7	(see table in SNTool criteria selection rationale)	%	0: 0,5%	Technical evaluation of municipal offices
			5: 2%	Technical evaluation of municipal offices
A2.1	(see table in SNTool	%	0: 85%	represents a minimum

A2.4	criteria selection rationale)			standard on average in the whole city (city center, peripheral areas, ...)
			5: 100%	Represents the optimal standard
	(see table in SNTool criteria selection rationale)	km/1000 residents	0: 0,0014	Technical evaluation of municipal offices
			5: 0,0042	Technical evaluation of municipal offices

B- ECONOMY				
CRITERION	INDICATOR	UNIT OF MEASURE	BENCHMARK	RATIONALE
B2.2	(see table in SNTTool criteria selection rationale)	%	0: 80%	Based on technical report (Rapporto Rota)
			5: 90%	Based on technical report (Rapporto Rota)
B3.3	(see table in SNTTool criteria selection rationale)	€/mq	0: 7,4	Typical performance (ENEA REPORT)
			5: 4	Consumption reduction estimation (Politecnico of Turin study)

C- ENERGY				
CRITERION	INDICATOR	UNIT OF MEASURE	BENCHMARK	RATIONALE
C1.1	(see table in SNTTool criteria selection rationale)	kWh/m2 year	0: 70	Values from TABULA project
			5: 30	Values from Casa ClimaBolzano and ENEA
C1.2	(see table in SNTTool criteria selection rationale)	kWh/m2 year	0: 70	Values from TABULA project
			5: 30	Values from Casa ClimaBolzano and ENEA
C1.3	(see table in SNTTool criteria selection rationale)	kWh/m2 year	0: 70	Values from TABULA project (excluded process)
			5: 30	Values from Casa ClimaBolzano and ENEA
C1.4	(see table in SNTTool criteria selection rationale)	kWh/m2 year	0: 50	EURAC Study

	(see table in SNTTool criteria selection rationale)		5: 20	EURAC study
C1.5	(see table in SNTTool criteria selection rationale)	kWh/m <sup>2</sup> year	0: 20	EURAC study
			5: 5	EURAC study
C1.6	(see table in SNTTool criteria selection rationale)	kWh/m <sup>2</sup> year	0: 60	EURAC study
			5: 39	Insert EURAC study
C1.7	(see table in SNTTool criteria selection rationale)	kWh/m <sup>2</sup> year	0: 322	20% reduction compared to actual value
			5: 242	40% reduction compared to actual value
C1.20	(see table in SNTTool criteria selection rationale)	kWh/m <sup>2</sup> year	0: 1	20% reduction compared to actual value
			5: 0,5	Best practice (EU, DE)
C2.1	(see table in SNTTool criteria selection rationale)	%	0: 20	20% objectives from 2020 EU Strategy
			5: 100	Excellent and ideal target
C2.4	(see table in SNTTool criteria selection rationale)	%	0: 20	20% objectives from 2020 EU Strategy
			5: 100	Excellent and ideal target
C2.7	(see table in SNTTool criteria selection rationale)	%	0: 20	20% objectives from 2020 EU Strategy
			5: 100	Excellent and ideal target
C2.8	(see table in SNTTool criteria selection rationale)	MWh/y	0: 100	10% roof surface (sud facing) for PV
			5: 1000	90% roof surface (sud facing) for PV

D- ATMOSPHERIC EMISSIONS				
CRITERION	INDICATOR	UNIT OF MEASURE	BENCHMARK	RATIONALE
D1.2	(see table in SNTTool criteria selection rationale)	kgCO <sub>2</sub> /10 00m <sup>2</sup>	0: 22,5	Technical evaluation
			5: 0	Excellent and ideal target

E- NON-RENEWABLE RESOURCES				
CRITERION	INDICATOR	UNIT OF MEASURE	BENCHMARK	RATIONALE
E1.6	(see table in SNTTool criteria selection rationale)	m <sup>3</sup> inhabitant s/y	0: 65	Based on indication from SMAT sustainability report 2017
			5: 61	Based on indication from SMAT sustainability report 2017
E1.7	(see table in SNTTool criteria selection rationale)	m <sup>3</sup> /m <sup>2</sup> y	0: 1	Local current values
			5: 0,5	50% reduction based on local current value
E2.1	(see table in SNTTool criteria selection rationale)	%	0: 75	represents a minimum standard on average in the whole city (city center, peripheral areas, ...)
			5: 98	Represents the optimal standard
E2.2	(see table in SNTTool criteria selection rationale)	%	0: 65	Based on indication of the regional waste plan
			5: 75	Best urban practices

F- ENVIRONMENT				
CRITERION	INDICATOR	UNIT OF MEASURE	BENCHMARK	RATIONALE
F1.3	(see table in SNTTool criteria selection rationale)	%	0: 20	Based on tech. std. for the implementation for urban development plan
			5: 40	Based on tech. std. for the implementation for urban

development plan				
<b>F2.1</b>	(see table in SNTTool criteria selection rationale)	µg/m3	0: 20	Based on EU Directive limits
	(see table in SNTTool criteria selection rationale)		5: 10	OMS recommendation
<b>F2.3</b>	(see table in SNTTool criteria selection rationale)	n	0: 35	Based on EU Directive limits
	(see table in SNTTool criteria selection rationale)		5: 25	Based on values in similar cities without significant pollution problems (suggested by ARPA)
<b>F3.1</b>	(see table in SNTTool criteria selection rationale)	m2 /inhab	0: 12,5	Based on national urban standard
	(see table in SNTTool criteria selection rationale)		5: 33	Amelioration on national urban standard

G- SOCIAL ASPECTS				
CRITERION	INDICATOR	UNIT OF MEASURE	BENCHMARK	RATIONALE
<b>G2.1</b>	Performance of the public transport service	%	0: 70%	Technical evaluation
			5: 100%	Technical evaluation
<b>G2.4</b>	Quality of pedestrian and bicycle network	m/100 inhab	0: 14	Technical evaluation of municipal offices
			5: 42	Technical evaluation of municipal offices
<b>G4.2</b>	(see table in SNTTool criteria selection rationale)	%	0: 80	Technical evaluation
	(see table in SNTTool criteria selection rationale)		5: 100	Actual value
<b>G4.3</b>	(see table in SNTTool criteria selection rationale)	%	0: 50	Based on National standard (DM 75/75, evaluated with municipal offices)

	(see table in SNTTool criteria selection rationale)		5: 75	Increase compared to National standard (DM 75/75, evaluated with municipal offices)
<b>G4.4</b>	(see table in SNTTool criteria selection rationale)	%	0: 30	Based on National standard (DM 75/75, evaluated with municipal offices)
	(see table in SNTTool criteria selection rationale)		5: 60	Increase compared to National standard (DM 75/75, evaluated with municipal offices)
<b>G4.5</b>	(see table in SNTTool criteria selection rationale)	%	0: 30	Technical evaluation
			5: 60	Technical evaluation
<b>G6.3</b>	(see table in SNTTool criteria selection rationale)	n	0: -1(0)	-
			5: 5	-

## SNTTool Criteria Specifications

A- BUILT URBAN SYSTEMS			
CRITERION	INDICATOR	SPECIFICATIONS	
<b>A1.2</b>	Urban compactness	Information source	Shape file from Comune di Torino (ing. Gallo). The data are geometrical measurements
		Assessment method	Calculation of building volume and of the urban area from shapefile
		Standard	No
<b>A1.7</b>	Conservation of Land	Information source	Shape file from Comune di Torino (ing. Gallo). The data are geometrical measurements
		Assessment method	Calculation of undeveloped land (agricultural)
		Standard	no
<b>A2.1</b>	Walking distance...	Information	Shape file from Comune di Torino

		source	(ing. Gallo). The data are geometrical measurements
		Assessment method	Centroids for distance evaluation
		Standard	no
A2.4	Connectivity of bicycle path	Information source	Shape file from Comune di Torino (divisione infrastrutture e mobilità ). The data are geometrical measurements
		Assessment method	Calculation of bicycle path length
		Standard	no

## B- ECONOMY

CRITERION	INDICATOR	SPECIFICATIONS	
		Information source	Rapporto Rota
B2.2	Per capita income	Assessment method	Content of the study
		Standard	no
B3.3	Running costs of energy for public buildings	Information source	Data from Servizio Controllo Utenze e Contabilità Fornitori
		Assessment method	Data given
		Standard	no

## C- ENERGY

CRITERION	INDICATOR	SPECIFICATIONS	
		Information source	Overall city consumptions (DB from Covenant of Majors)/overall final thermal consumptions
C1.1	Total final thermal energy consumption for building operation	Assessment method	Value obtained from specific urban consumption reported in the Covenant of Mayors Database, compared to the surface of our pilot area
		Standard	TABULA project; when possible referred to UNI 11300

<b>C1.2</b>	<i>Total thermal residential</i>	<i>Information source</i>	<i>Overall city consumptions (DB from Covenant of Majors)</i>
		<i>Assessment method</i>	<i>Value obtained from specific urban consumption of residential buildings reported in the Covenant of Mayors Database, compared to the surface of our pilot area-residential buildings</i>
		<i>Std.</i>	<i>TABULA; when possible referred to UNI 11300</i>
<b>C1.3</b>	<i>Total thermal NON residential</i>	<i>Information source</i>	<i>Overall city consumptions (DB from Covenant of Majors)</i>
		<i>Assessment method</i>	<i>Value obtained from specific urban consumption of NON residential buildings reported in the Covenant of Mayors Database, compared to the surface of our pilot area- NON residential buildings</i>
		<i>Std.</i>	<i>No – when possible referred to UNI 11300</i>
<b>C1.4</b>	<i>Total final electric energy consumption for building operation</i>	<i>Information source</i>	<i>Overall city consumptions (DB from Covenant of Majors)</i>
		<i>Assessment method</i>	<i>Value obtained from specific urban consumption reported in the Covenant of Mayors Database, compared to the surface of our pilot area</i>
		<i>Std.</i>	<i>No – when possible referred to UNI 11300</i>
<b>C1.5</b>	<i>Total final electric residential</i>	<i>Information source</i>	<i>Overall city consumptions (DB from Covenant of Majors)</i>
		<i>Assessment method</i>	<i>Value obtained from specific urban consumption of residential buildings reported in the Covenant of Mayors Database, compared to the surface of our pilot area-residential buildings</i>
		<i>Std.</i>	<i>No – when possible referred to UNI</i>

C1.6	Total final electric for NON residential	Information source	11300 Overall city consumptions (DB from Covenant of Majors)
		Assessment method	Value obtained from specific urban consumption of NON residential buildings reported in the Covenant of Mayors Database, compared to the surface of our pilot area-residential buildings
		Std.	No – when possible referred to UNI 11300
C1.7	Total primary for building operation	Information source	Overall city consumptions (DB from Covenant of Majors)
		Std.	
		Assessment method	The value is calculated as the sum of (thermal + electric) consumption for the whole city related to the surface of buildings in the AREA multiplied for the coefficient for energy conversion into primary energy, derived from the DM 26/6/2016
		Std.	No
C1.20	Energy consumption public lightning	Information source	Data derived from TERNA
		Assessment method	average annual consumption per inhabitants (TERNA), kWh/mq, multiplied for the AREA SURFACE, and then related to the number of inhabitants living in the AREA.
C2.1	Share of renewable energy on site...	Information source	Altlaimpianti_GSE; DB from Covenant of Majors
		Assessment method	Calculated the production of Renewable thermal energy from GSE database. Calculate the total thermal consumption, from DB from Covenant of Majors. Ratio between them
C2.4	Share .. on total primary	Standard	No
		Information source	Altlaimpianti_GSE; DB from Covenant of Majors

		Assessment method	<p>Calculated the production of Renewable thermal + electric energy from GSE database.</p> <p>Calculate the total thermal+ electric consumption, from DB from Covenant of Majors.</p> <p>Transformation into primary energy. Ration between them</p>
		Standard	No
C2.7	Share .. on total primary	Information source	Altlaimpianti_GSE; DB from Covenant of Majors
		Assessment method	<p>Calculated the production of Renewable thermal + electric energy from GSE database.</p> <p>Calculate the total thermal+ electric consumption, from DB from Covenant of Majors.</p> <p>Transformation into primary energy. Ration between them</p>
		Standard	No
C2.8	Aggregated electric ...from RE...on public buildings	Information source	Estimation Size of PV plant
		Assessment method	Estimation of the production of the existing PV plant
		Standard	No

D- ATMOSPHERIC EMISSIONS			
CRITERION	INDICATOR	SPECIFICATIONS	
D1.2	GHG emission from energy used for all purposes in building operation	Information source	Overall city consumptions (DB from Covenant of Majors)
		Assessment method	Calculation of the total emission from thermal and electric consumptions, in kg CO2.
		Standard	Conversion factors from POR 2014/2020

E- NON-RENEWABLE RESOURCES			
CRITERION	INDICATOR	SPECIFICATIONS	
E 1.6	Consumption of potable water for residential population	Information Source	SMAT Bilancio di Sostenibilità 2017
		Assessment method	Use of the indicator in the SMAT '2017 Sustainability Report'.
		Standard	no.
E 1.7	Consumption of potable water for non-residential building systems	Information Source	
		Assessment method	
		Standard	no.
E 2.1	Solid Waste and recycling point	Information Source	Iren -Amiat
		Assessment method	<p>Definition of centroids drawn on the different census sections (centre of gravity of the polygon).</p> <p>The radius of the centroid (hypotenuse) is established using the formula of Pythagoras' theorem, assuming the length of the sum of the cathetes as the distance indicated for the calculation of the indicator. The City of Turin is in fact characterized by a predominantly Roman (orthogonal) urban plan.</p>
		Standard	no.

E 2.2	Separate collection and disposal of solid waste and recycling	Information Source	Iren -Amiat
		Assessment method	weighted average of the percentages of separate collection of the two city districts (V and VI) included in the pilot area
		Standard	no.

## F- ENVIRONMENT

CRITERION	INDICATOR	SPECIFICATIONS	
F 1.3	Recharge of groundwater through permeable paving or landscaping	Information source	Shape file from Comune di Torino The data are geometrical measurements
		Assessment method	sum of green areas with a coefficient of permeability equal to one and a coefficient of permeability equal to 0.9 in relation to the total surface area of the pilot area
		Standard	no
F 2.1	Ambient air quality with respect to particulates PM 2,5 over a one year period	Information source	Annual report on air quality, drawn up by Arpa Piemonte and the Metropolitan City of Turin - Data from the monitoring unit
		Assessment method	extraction of the specific data from the Annual Air Quality Report
		Standard	no
F 2.3	Ambient air quality with respect to particulates PM 10	Information source	Annual report on air quality, drawn up by Arpa Piemonte and the Metropolitan City of Turin - Data

	over a one year period		from the monitoring unit
		Assessment method	extraction of the specific data from the Annual Air Quality Report
		Standard	no
F 3.1	Green zones and recreation areas availability	Information source	Shape file from Comune di Torino The data are geometrical measurements
		Assessment method	sum of green zones and recreations areas in relation to the inhabitants of the pilot area
		Standard	no

G- SOCIAL ASPECTS		
CRITERION	INDICATOR	SPECIFICATIONS
		Shapefile from Comune di Torino
		Information source Divisione Infrastrutture e Mobilità
G 2.1	Performance of the public transport services	Assessment method Definition of centroids drawn on the different census sections (centre of gravity of the polygon). The radius of the centroid (hypotenuse) is established using the formula of Pythagoras' theorem, assuming the length of the sum of the cathetes as the distance indicated for the calculation of the indicator. The City of Turin is in fact characterized by a predominantly Roman (orthogonal) urban plan.

		Standard	no
<b>G 2.4</b>	Quality of pedestrian and bicycle network	Information source	Shapefile from Comune di Torino Divisione Infrastrutture e Mobilità
		Assessment method	sum of linear meters of bicycle path and pedestrians area in relation to the inhabitants of the pilot area.
		Standards	no
<b>G 4.2</b>	Availability and proximity of key public human services	Information source	Shape file from Comune di Torino
		Assessment method	Definition of centroids drawn on the different census sections (centre of gravity of the polygon).  The radius of the centroid (hypotenuse) is established using the formula of Pythagoras' theorem, assuming the length of the sum of the cathetes as the distance indicated for the calculation of the indicator. The City of Turin is in fact characterized by a predominantly Roman (orthogonal) urban plan
		Standards	no
<b>G 4.3</b>	Availability and proximity of a primary school	Information source	Shape file from Comune di Torino

		Assessment method	<p>Definition of centroids drawn on the different census sections (centre of gravity of the polygon).</p> <p>The radius of the centroid (hypotenuse) is established using the formula of Pythagoras' theorem, assuming the length of the sum of the cathetes as the distance indicated for the calculation of the indicator. The City of Turin is in fact characterized by a predominantly Roman (orthogonal) urban plan</p>
		Standards	no
<b>G 4.4</b>	Availability and proximity of a secondary school	Information source	Shape file from Comune di Torino
		Assessment method	<p>Definition of centroids drawn on the different census sections (centre of gravity of the polygon).</p> <p>The radius of the centroid (hypotenuse) is established using the formula of Pythagoras' theorem, assuming the length of the sum of the cathetes as the distance indicated for the calculation of the indicator. The City of Turin is in fact characterized by a predominantly Roman (orthogonal) urban plan</p>
		Standards	no
<b>G 4.5</b>	Availability and proximity of children's play facilities	Information source	Shape file from Comune di Torino
		Assessment method	<p>Definition of centroids drawn on the different census sections (centre of gravity of the polygon).</p> <p>The radius of the centroid (hypotenuse) is established using the formula of Pythagoras' theorem,</p>

*assuming the length of the sum of the cathetes as the distance indicated for the calculation of the indicator. The City of Turin is in fact characterized by a predominantly Roman (orthogonal) urban plan*

Standards	no

# REGIONAL TOOL

## D.3.4.3 Regional Tool – City of Udine

Version 1.1

Date: March 2019

2.1: To raise capacity for better management of energy in public buildings at transnational level

Work package: WP3 TESTING

Activity: 3.4 Evaluation of test results

Deliverable: 3.4.3 – Regional CESBA MED SNTs

**Responsible Partner:** Andrea Moro, iiSBE Italia R&D

# URBAN SCALE ASSESSMENT

## SNTool structure

### A - BUILT URBAN SYSTEMS

<b>A1</b>	<b>Urban Structure and Form</b>
A1.2	<i>Urban compactness</i>
A1.4	<i>* Residential density</i>
A1.7	<i>Conservation of Land</i>
<b>A2</b>	<b>Transportation Infrastructure</b>
A2.5	<i>Cyclomatic complexity of the street network</i>
A2.8	<i>Scale of the street network</i>

### B - ECONOMY

<b>B1</b>	<b>Economic Structure and Value</b>
B1.1	<i>Affordability of housing property</i>
B1.2	<i>Affordability of housing rental</i>
B1.6	<i>Percent of residential units in the neighborhood that are vacant.</i>
<b>B2</b>	<b>Economic activity</b>
B2.3	<i>Employment rate.</i>
<b>B3</b>	<b>Cost and Investment</b>
B3.3	<i>Use stage energy cost for public buildings.</i>

### C - ENERGY

<b>C1</b>	<b>Non-renewable energy</b>
C1.1	<i>Total final thermal energy consumption for building operations.</i>
C1.4	<i>Total final electrical energy consumption for building operations.</i>
C1.7	<i>Total primary energy demand for building operations.</i>
C1.20	<i>Energy consumption of public lighting.</i>
C1.21	<i>Energy consumption of local public transport.</i>
<b>C2</b>	<b>Renewable and Decarbonized energy</b>
C2.1	<i>Share of renewable energy on-site, on total final thermal energy consumptions for buildings operation.</i>
C2.7	<i>Share of electric energy generation from on-site renewable sources on final electric energy.</i>

### D - ATMOSPHERIC EMISSIONS

<b>D1</b>	<b>Atmospheric emissions</b>
D1.2	<i>Total GHG Emissions from primary energy used in building operations.</i>
D1.4	<i>Aggregate emissions of acidifying emissions during building operations.</i>

### E - NON - RENEWABLE RESOURCES

<b>E1</b>	<b>Potable water, stormwater and greywater</b>
-----------	--

E1.3	<i>Re-use of rainwater in residential buildings.</i>
E1.4	<i>Re-use of rainwater in non-residential building.</i>
E1.6	<i>Consumption of potable water for residential population.</i>
E1.7	<i>Consumption of potable water for non-residential building systems.</i>
E1.8	<i>Consumption of potable water for irrigation purposes.</i>
<b>E2</b>	<b>Solid and Liquid Wastes</b>
E2.1	<i>Solid waste and recycling collection points.</i>
E2.6	<i>Public wastewater that is disposed or treated.</i>
<b>E3</b>	<b>Resource consumption, retention and maintenance</b>
E3.5	<i>Preservation and maintenance of existing buildings and structures.</i>

## F - ENVIRONMENT

<b>F1</b>	<b>Environmental impacts</b>
F1.3	<i>Recharge of groundwater through permeable paving or landscaping.</i>
F1.11	<i>Albedo</i>
<b>F2</b>	<b>Outdoor environmental quality</b>
F2.3	<i>Ambient air quality with respect to particulates &lt;10 µm (PM10) over a one-year period.</i>
F2.11	<i>Ambient night-time noise conditions.</i>
<b>F3</b>	<b>Ecosystems and landscapes</b>
F3.1	<i>Green zones &amp; recreation areas availability</i>
F3.6	<i>Tree coverage for shade and management of local ambient temperatures.</i>
F3.7	<i>Green roofs.</i>
F3.9	<i>Presence or potential for wildlife corridors.</i>

## G - SOCIAL ASPECTS

<b>G1</b>	<b>Traffic and Mobility Services</b>
G1.2	<i>Sidewalks and other pedestrian paths that are accessible for use by physically disabled persons.</i>
G1.3	<i>Barrier-free accessibility in local outdoor public areas.</i>
G1.4	<i>Ease of access to and use of public transport for physically disabled persons..</i>
<b>G2</b>	<b>Traffic and Mobility Services</b>
G2.1	<i>Performance of the public transport.</i>
G2.2	<i>Availability of car sharing services</i>
G2.4	<i>Quality of pedestrian and bicycle network.</i>
<b>G3</b>	<b>Communication services</b>
G3.1	<i>Availability of a broadband communication network</i>
<b>G4</b>	<b>Public and private facilities and services</b>
G4.2	<i>Availability and proximity of key services</i>
G4.6	<i>Availability and proximity of leisure facilities</i>
<b>G5</b>	<b>Local Food</b>
G5.2	<i>Residents' access to and use of urban agricultural plots.</i>
<b>G6</b>	<b>Management and community involvement</b>
G6.3	<i>Community involvement in urban planning activities</i>

## SNTool criteria selection rationale

### A - BUILT URBAN SYSTEMS

CRITERION	REASON/MOTIVATION
A1.2 - Urban compactness	Assess the actual consumption and use of land. EMAS declaration 30.06.2017 rev. 13. General urban development plan.
A1.4 - Residential density	Analyze the population density to avoid creating "ghetto" areas.
A1.7 - Conservation of Land	Protect the area with high agricultural and environmental characteristics. EMAS declaration 30.06.2017 rev. 13. General urban development plan.
A2.5 - Cyclomatic complexity of the street network	Evaluate the network of paths and the ease of access to the various areas.
A2.8 - Scale of the street network	Evaluate the length of the routes.

### B - ECONOMY

CRITERION	REASON/MOTIVATION
B1.1 - Affordability of housing property	Maintaining a proper ratio between the income of the residents and the purchase cost of the accommodation.
B1.2 - Affordability of housing rental	Maintaining a proper ratio between the income of the residents and the cost of renting the accommodation.
B1.6 - Percent of residential units in the neighbourhood that are vacant.	Evaluate hypothesis of abandonment of the area by residents.
B2.3 - Employment rate.	Evaluate social quality with respect to employment.
B3.3 - Use stage energy cost for public buildings	Evaluate the impact of energy costs per square meter of public buildings. PAES "Sustainable Energy (and Climate) Action Plan" of 23-07-2010

### C - ENERGY

CRITERION	REASON/MOTIVATION
C1.1 - Total final thermal energy consumption for building operations.	Evaluate the real energy consumption index of the area. PAES "Sustainable Energy (and Climate) Action Plan" of 23-07-2010. Energy regulation.
C1.4 - Total final electrical energy consumption for building operations.	Evaluate the real electric consumption index of the area. PAES "Sustainable Energy (and Climate) Action Plan" of 23-07-2010.
C1.7 - Total primary energy demand for building operations.	Evaluate the deviation between the primary reference energy with the calculated primary energy. PAES "Sustainable Energy (and Climate)

C1.20 - Energy consumption of public lighting.	Action Plan" of 23-07-2010. D.M. Minimum requirements Evaluate the consumption of public lighting. EMAS declaration 30.06.2017 rev. 13.
C1.21 - Energy consumption of local public transport.	Check the level of sustainability achieved by the consumption of public transport. EMAS declaration 30.06.2017 rev. 13. PAES "Sustainable Energy (and Climate) Action Plan" of 23-07-2010
C2.1 - Share of renewable energy on-site, on total final thermal energy consumptions for buildings operation.	Evaluate the relationship between renewable and total energy. EMAS declaration 30.06.2017 rev. 13. PAES "Sustainable Energy (and Climate) Action Plan" of 23-07-2010. DLgs 28/11
C2.7 - Share of renewable energy on-site, on final electric energy consumptions.	Evaluate the percentage of on - site electric renewable energy with respect to the total. EMAS declaration 30.06.2017 rev. 13. PAES "Sustainable Energy (and Climate) Action Plan" of 23-07-2010. DLgs 28/11

D - ATMOSPHERIC EMISSIONS	
CRITERION	REASON/MOTIVATION
D1.2 - Total GHG Emissions from primary energy used in building operations.	Evaluate the level of emissions in relation to the PAES "Sustainable Energy (and Climate) Action Plan" of 23-07-2010
D1.4 - Aggregate emissions of acidifying emissions during building operations.	Evaluate the impact of other emissions in relation to the ISO 14001 Environmental Certification. PAC (Municipal Action Plan) 4 February 2014.

E - NON - RENEWABLE RESOURCES	
CRITERION	REASON/MOTIVATION
E1.3 - Re-use of rainwater in residential buildings.	Verify the recovery of rainwater in residential buildings. Energy regulation 6 February 2013. EMAS declaration 30.06.2017 rev. 13.
E1.4 - Re-use of rainwater in non-residential building.	Verify the recovery of rainwater in non-residential buildings. Energy regulation 6 February 2013. EMAS declaration 30.06.2017 rev. 13.
E1.6 - Consumption of potable water for residential building systems.	Analyze water savings in residential buildings
E1.7 - Consumption of potable water for non-residential building systems.	Analyze water savings in non-residential buildings
E1.8 - Consumption of potable water for irrigation purposes.	Check the impact of water consumption for irrigation and rainwater recovery.
E2.1 - Solid waste and recycling collection points.	Evaluate the quality of the service and the level of recycling. EMAS declaration 30.06.2017 rev. 13.
E2.6 - Public wastewater that is disposed or treated.	Evaluate the level of treatment of processed and disposed of public waters EMAS declaration 30.06.2017 rev. 13.
E3.5 - Preservation and maintenance of existing buildings and structures.	Evaluate the level of maintenance quality.

F - ENVIRONMENT	
CRITERION	REASON/MOTIVATION
F1.3 - <i>Recharge of groundwater through permeable paving or landscaping.</i>	<i>Check the capacity of the area to feed the groundwater. UNI PdR 13 ITACA.</i>
F1.11 - <i>Albedo</i>	<i>Evaluate the quality of the external environment during the summer season. UNI PdR 13 ITACA ...</i>
F2.3 - <i>Ambient air quality with respect to particulates &lt;10 µm (PM 10) over a one-year period.</i>	<i>Analyze the quality of the air. EMAS declaration 30.06.2017 rev. 13.</i>
F2.11 - <i>Ambient night-time noise conditions.</i>	<i>Evaluate the level of noise pollution. EMAS declaration 30.06.2017 rev. 13.</i>
F3.1 - <i>Green zones &amp; recreation areas availability</i>	<i>Evaluate the allocation of Green surfaces. EMAS declaration 30.06.2017 rev. 13.</i>
F3.6 - <i>* Tree coverage for shade and management of local ambient temperatures.</i>	<i>Evaluate the quality of the Green areas in relation to their usability. Green regulation</i>
F3.7 - <i>Green roofs.</i>	<i>Encourage the use of green roofs Energy regulation 6 February 2013.</i>
F3.9 - <i>Presence or potential for wildlife corridors.</i>	<i>Allow the fauna to be able to populate the various green areas and allow their full use</i>

G - SOCIAL ASPECTS	
CRITERION	REASON/MOTIVATION
G1.2 - <i>Sidewalks and other pedestrian paths that are accessible for use by physically disabled persons.</i>	<i>Evaluate the accessibility of the sidewalks by disabled people</i>
G1.3 - <i>Barrier-free accessibility in local outdoor public areas.</i>	<i>Verify the barrier-free accessibility of public areas.</i>
G1.4 - <i>Ease of access to and use of public transport for physically disabled persons.</i>	<i>Evaluate the accessibility of public transport by people with disabilities.</i>
G2.1 - <i>Performance of the public transport.</i>	<i>Analyze the public service in its general aspects EMAS declaration 30.06.2017 rev. 13. PUM Urban Mobility Plan October 2011.</i>
G2.2 - <i>Availability of car sharing services</i>	<i>Incentive use of car-sharing. EMAS declaration 30.06.2017 rev. 13. PUM Urban Mobility Plan October 2011.</i>
G2.4 - <i>Quality of pedestrian and bicycle network.</i>	<i>Measure the availability of pedestrian paths and cycle paths. EMAS declaration 30.06.2017 rev. 13. PUM Urban Mobility Plan October 2011.</i>
G3.1 - <i>Availability of a broadband communication network</i>	<i>Allow access to information and online services Reduce the digital divide. AGICOM.</i>
G4.2 - <i>Availability and proximity of key services</i>	<i>Evaluate the quality of public human services in the area. EMAS declaration 30.06.2017 rev. 13.</i>
G4.6 - <i>Availability and proximity of leisure facilities</i>	<i>Analyze the sporting and cultural services in the area. EMAS declaration 30.06.2017 rev. 13.</i>
G5.2 - <i>Residents' access to and use of urban agricultural plots.</i>	<i>Offer the opportunity to produce garden produce on site and encourage the consumption of vegetables and forms of socialization. Agenda 21. Guidelines "The garden and the moon" by G.C. n. 338 of 1 October 2013.</i>
G6.3 - <i>Community involvement in urban planning activities</i>	<i>Evaluate the level of community involvement and the actual level of participatory planning. EMAS declaration 30.06.2017 rev. 13. Programmatic declarations of the Mayor of Udine</i>

## SNTool weights rationale

### ISSUES WEIGHTS

ISSUE	WEIGHTING FACTOR (1 to 3)	MOTIVATION
A - BUILT URBAN SYSTEMS	1	Rigidity of the system
B - ECONOMY	2	Reduced power of intervention - Reduced intervention domain
C - ENERGY	3	Political priority; PAC - PAES - EMAS
D - ATMOSPHERIC EMISSIONS	2	Reduced power of intervention - Reduced intervention domain
E - NON - RENEWABLE RESOURCES	3	Political priority; PAC - PAES - EMAS
F - ENVIRONMENT	2	Reduced power of intervention - Reduced intervention domain
G - SOCIAL ASPECTS	2	Reduced power of intervention - Reduced intervention domain

### CATEGORIES WEIGHTS

CATEGORIES	WEIGHT (%)
A1 - Urban Structure and Form	44,44
A2 - Transportation Infrastructure	55,56
TOTAL	100
B1 - Economic Structure and Value	73,91
B2 - Economic activity	13,04
B3 - Cost and Investment	13,04

## SNTool benchmarks rationale

A - URBAN STRUCTURE AND FORM				
CRITERION	INDICATOR	UNIT OF MEASURE	BENCHMARK	RATIONALE
A1.2	Urban compactness	m <sup>3</sup> / m <sup>2</sup>	0: 1,0	maximum index of extensive zones
			5: 3,5	Maximum territorial Index PRGC
A1.4	Residential density	Pp/ha	0: 40	Average value of the city
			5: 300	Assumption of doubling the value of Aurora neighborhood
A1.7	Conservation of Land	%	0: 7	Real data of the neighborhood
			5: 42	Global data of the city
A2.5	Cyclomatic complexity of the street network	n	0: 30	-
			5: 100	-
A2.8	Scale of the street network	m	0: 160	Walking path in two minutes
			5: 80	walking path in one minutes

B - ECONOMY				
CRITERION	INDICATOR	UNIT OF MEASURE	BENCHMARK	RATIONALE
B1.1	<b>Affordability of housing property</b>	%	0: 18	-
			5: 25	-
B1.2	<b>Affordability of housing rental</b>	%	0: 18	-
			5: 25	-
B1.6	<b>Percent of residential units in the neighbourhood that are vacant</b>	%	0: 4	-
			5: 2	-
B2.3	<b>Employment rate.</b>	%	0: 65	FVG employment rate 2018
			5: 98	Physiological value 2%
B3.3	<b>Use stage energy cost for public buildings</b>	Euro/m <sup>2</sup> /year	0: 10	Current basic data
			5: 3	Passive or NZEB Building

C - ENERGY				
CRITERION	INDICATOR	UNIT OF MEASURE	BENCHMARK	RATIONALE
C1.1	<b>Total final thermal energy consumption for building operations.</b>	kWh/m <sup>2</sup> /year	0: 80	Current index
			5: 10	Energy regulation
C1.4	<b>Total final electrical energy consumption for building operations.</b>	kWh/m <sup>2</sup>	0: 23	-
			5: 5	-
C1.7	<b>Total primary energy demand for building operations.</b>	kWh/m <sup>2</sup> /year	0: 72	D.M. Minimum requirements
			5: 50	-
C1.20	<b>Energy consumption of public lighting.</b>	kWh/m <sup>2</sup>	0: 56	Present value
			5: 16	PAES value
C1.21	<b>Energy consumption of local public transport.</b>	Pax.km/Mj	0: 500	-
			5: 1000	-
C2.1	<b>Share of renewable energy on-site, on total final thermal energy consumptions for buildings operation.</b>	%	0: 25	D.Lgs 28/11
			5: 50	-
C2.7	<b>Share of renewable energy on-site, on final electric energy consumptions</b>	%	0: 35	-
			5: 75	-

D - ATMOSPHERIC EMISSIONS				
CRITERION	INDICATOR	UNIT OF MEASURE	BENCHMARK	RATIONALE
D1.2	<b>Total GHG Emissions from primary energy used in building operations.</b>	kg CO <sub>2</sub> eq./m <sup>2</sup> /year	0: 13	D.M. Minimum requirements
			5: 11	PAES value
D1.4	<b>Aggregate emissions of acidifying emissions during building operations.</b>	g / 1000 m <sup>2</sup>	0: 120	The data is confirmed
			5: 18	PAES savings 40%

E - NON-RENEWABLE RESOURCES				
CRITERION	INDICATOR	UNIT OF MEASURE	BENCHMARK	RATIONALE
E1.3	<b>Re-use of rainwater in residential buildings.</b>	%	0: 10	The data is confirmed
			5: 60	The data is confirmed
E1.4	<b>Re-use of rainwater in non-residential building.</b>	%	0: 10	The data is confirmed
			5: 80	The data is confirmed
E1.6	<b>Consumption of potable water for residential population.</b>	m <sup>3</sup> /occupant/year	0: 47,450	ITACA standard value
			5: 23,700	With best performance at 50% on the standard
E1.7	<b>Consumption of potable water for non-residential building systems.</b>	m <sup>3</sup> /m <sup>2</sup>	0: 1,3	Standard UNI PdR ITACA not residential
			5: 0,6	Best UNI PdR ITACA not residential
E1.8	<b>Consumption of potable water for irrigation purposes.</b>	m <sup>3</sup> /1000m <sup>2</sup>	0: 300	UNI PdR ITACA not residential
			5: 0	Total recovery
E2.1	<b>Solid waste and recycling collection points.</b>	%	0: 70	Current neighborhood data
			5: 98	Expected coverage
E2.6	<b>Public wastewater that is disposed or treated.</b>	%	0: 90	The data is confirmed
			5: 100	All the waters are processed
E3.5	<b>Preservation and maintenance of existing buildings and structures.</b>	benchmark text scale	0: 0	Maintenance standard
			5: 5	High quality interventions

F - ENVIRONMENT				
CRITERION	INDICATOR	UNIT OF MEASURE	BENCHMARK	RATIONALE
F1.3	<b>Recharge of groundwater through permeable paving or landscaping.</b>	%	0: 40	UNI PdR ITACA
			5: 60	UNI PdR ITACA
F1.11	<b>Albedo</b>	%	0: 0	UNI PdR ITACA

			5: 100	UNI PdR ITACA
F2.3	Ambient air quality with respect to particulates <10 µm (PM10) over a one-year period.	day/year	0: 35	Average annual limit
			5: 0	Value 3 = 35 ug/m3 - EMAS
F2.11	Ambient night-time noise conditions.	%	0: -	-
			5: -	-
F3.1	Green zones & recreation areas availability	m2/inhab	0: 20	ISTAT value about city of Udine
			5: 75	-
F3.6	Tree coverage for shade and management of local ambient temperatures.	%	0: -	-
			5: -	-
F3.7	Green roof	%	0: -	-
			5: -	-
F3.9	Presence or potential for wildlife corridors.	benchmark text scale	0: 0	Traffic with low traffic
			5: 5	Specific design.

G - SOCIAL ASPECTS

G1.4	Ease of access to and use of public transport for physically disabled persons.	%	0: -	-
			5: -	-
G2.1	Performance of the public transport.	%	0: 60	The data is confirmed
			5: 100	Total coverage
G2.2	Availability of car sharing services	%	0: 1	The data is confirmed
			5: 20	The data is confirmed
G2.4	Quality of pedestrian and bicycle network.	m/100 inhabitants	0: 43	Average data of the city
			5: 129	PUM forecast
G3.1	Availability of a broadband communication network	%	0: 50	Minimum coverage required by the broadband strategy
			5: 100	Cancellation of the digital divide
G4.2	Availability and proximity of key	%	0: 30	The data is confirmed

	<b>services</b>		5: 80	The data is confirmed
<b>G4.6</b>	<b>Availability and proximity of leisure facilities</b>	%	0: 20	The data is confirmed
			5: 40	The data is confirmed
<b>G5.2</b>	<b>Residents' access to and use of urban agricultural plots.</b>	%	0: 20	Analogy with criterion G4.6
			5: 40	Analogy with criterion G4.6
<b>G6.3</b>	<b>Community involvement in urban planning activities</b>	-	0: 3	Tokenism degree - minimum 3 - information
			5: 9	Total control of citizens from project to project delivery 9

## SNTool Criteria Specifications

A - BUILT URBAN SYSTEMS			
CRITERION	INDICATOR	SPECIFICATIONS	
A1.2	<b>Urban compactness</b>	Information source	CTRN - tema: edifici - Edificato CTRN 5000 - 2° Edizione - Edificato 066 Census areas - 2011
		Assessment method	Calculated the area of the scope and the volumes by reprocessing volumes to deduce the surface of the eaves.
		Standard	Rules of the General urban development plan
A1.7	<b>Conservation of Land</b>	Information source	Full Surface area - census areas.
		Assessment method	To relate the total surface with respect to the ecological value of the neighborhood area.
		Standard	Present value of the district
A2.5	<b>Cyclomatic complexity of the street network</b>	Information source	Database Regione Friuli Venezia Giulia - Road segment
		Assessment method	Evaluate the number of segments that connect the individual nodes
		Standard	I keep the present data
A2.8	<b>Scale of the street network</b>	Information source	Evaluate the ease of access to the various areas of the neighborhood
		Assessment method	Ratio between length and number of segments
		Standard	Walking path in two minutes (UNI PdR_13 ITACA Residential)

B - ECONOMY			
CRITERION	INDICATOR	SPECIFICATIONS	
B1.1	<b>Affordability of housing property</b>	Information source	OMI Observatory trades
		Assessment method	Ratio between income and purchase value

		Standard	-
		Information source	OMI Observatory trades
<b>B1.2</b>	<b>Affordability of housing rental</b>	Assessment method	Ratio between income and rent value
		Standard	-
		Information source	ISTAT index
<b>B2.3</b>	<b>Employment rate.</b>	Assessment method	Relationship between people in working age and employed
		Standard	FVG 2018 employment rate
		Information source	Energy costs from bills
<b>B3.3</b>	<b>Use stage energy cost for public buildings</b>	Assessment method	Ratio between energy cost and net area of public buildings exceeding 1000 square meters
		Standard	Current value of consumption

C - ENERGY			
CRITERION	INDICATOR	SPECIFICATIONS	
		Information source	Energy consumption data
<b>C1.1</b>	<b>Total final thermal energy consumption for building operations.</b>	Assessment method	Calculate the annual consumption and divide it by the net area of the buildings
		Standard	Current value
		Information source	Energy consumption data
<b>C1.4</b>	<b>Total final electrical energy consumption for building operations.</b>	Assessment method	Calculate the annual consumption and divide it by the net area of the buildings
		Standard	Current value
		Information source	APE Energy Performance Certification
<b>C1.7</b>	<b>Total primary energy demand for building operations.</b>	Assessment method	Calculate the standard consumption and compare it to the reference standard consumption

		Standard	References of the law
C2.1	<b>Share of renewable energy on-site, on total final thermal energy consumptions for buildings operation.</b>	Information source	APE Energy Performance Certification
		Assessment method	Calculate the consumption of renewable energy in relation to total energy consumption
		Standard	References of the law
C2.7	<b>Share of renewable energy on-site, on final electric energy consumptions.</b>	Information source	APE Energy Performance Certification
		Assessment method	Calculate the consumption of renewable electricity in relation to total electricity consumption
		Standard	Reference of the law

## D - ATMOSPHERIC EMISSIONS

CRITERION	INDICATOR	SPECIFICATIONS	
D1.2	<b>Total GHG Emissions from primary energy used in building operations.</b>	Information source	APE Energy Performance Certification
		Assessment method	Calculate standard CO2 emitted
		Standard	References of the law
D1.4	<b>Aggregate emissions of acidifying emissions during building operations.</b>	Information source	Energy bills
		Assessment method	Calculate the emissions of individual fuels by normalizing them and dividing by the useful surfaces of buildings
		Standard	The data is accepted

## E - NON-RENEWABLE RESOURCES

CRITERION	INDICATOR	SPECIFICATIONS	
E1.3	<b>Re-use of rainwater in residential buildings.</b>	Information source	Numerical regional technical map. Building authorizations
		Assessment method	Calculate the ratio between the amount of rainwater and the recoverable one

		Standard	The data is accepted
E1.4	<b>Re-use of rainwater in non-residential building.</b>	Information source	Numerical regional technical map. Building authorizations
		Assessment method	Calculate the ratio between the amount of rainwater and the recoverable one
		Standard	The data is accepted
E1.6	<b>Consumption of potable water for residential population.</b>	Information source	Water suppliers
		Assessment method	Amount of water consumed
		Standard	130 lt/gg from UNI PdR_13 ITACA
E1.7	<b>Consumption of potable water for non-residential building systems.</b>	Information source	Water suppliers
		Assessment method	Ratio between consumption in mc and the net area in square meters of buildings
		Standard	1,3 m <sup>3</sup> /m <sup>2</sup>
E2.1	<b>Solid waste and recycling collection points.</b>	Information source	Waste plan and on-site relief of containers
		Assessment method	Percentage of the population at a distance of 100 m from the containers
		Standard	Current neighborhood data
E2.6	<b>Public wastewater that is disposed or treated.</b>	Information source	Water suppliers
		Assessment method	Ratio between treated water and produced water
		Standard	Standard not present at least 90%
E3.5	<b>Preservation and maintenance of existing buildings and structures.</b>	Information source	Projects or interventions performed
		Assessment method	Evaluation of the maintenance standard
		Standard	Typical regional ordinary maintenance

## F - ENVIRONMENT

CRITERION	INDICATOR	SPECIFICATIONS	
F1.3	Recharge of	Information	Census territorial area.

	<b>groundwater through permeable paving or landscaping.</b>	source	Urban furniture projects. Orthophotographic images.
		Assessment method	Calculate the ratio of the permeable surface to the total.
		Standard	40% - UNI PdR_13 ITACA
		Information source	Census territorial area. Urban furniture projects. Orthophotographic images.
<b>F1.11</b>	<b>Albedo</b>	Assessment method	Calculate the ratio of the weighted surface according to the reflection coefficient and the total
		Standard	0% - UNI PdR_13 ITACA
	<b>Ambient air quality with respect to particulates &lt;10 µm (PM10) over a one-year period.</b>	Information source	ARPA source data
<b>F2.3</b>		Assessment method	Annual average of the pollutant
		Standard	35 gg/year 40 µg / m3 - Law limit
	<b>Green zones &amp; recreation areas availability</b>	Information source	Census scope General urban development plan Municipal registry office
<b>F3.1</b>		Assessment method	Divide the green area for the resident population
		Standard	ISTAT Index Municipality of Udine
	<b>Presence or potential for wildlife corridors.</b>	Information source	General urban development plan
<b>F3.9</b>		Assessment method	Evaluation of connections between the various green areas
		Standard	Few opportunities to establish natural corridors.

G - SOCIAL ASPECTS			
CRITERION	INDICATOR	SPECIFICATIONS	
<b>G2.1</b>	<b>Performance of the public transport.</b>	Information source	Numeric Regional Technical Map - Road axes - House numbers - Municipal registry office. Public transport timetables.
		Assessment method	Percentage of the population at 400 m from the nearest public transport
		Standard	-
<b>G2.2</b>	<b>Availability of car sharing services</b>	Information source	List of users of the service

		Assessment method	Percentage of the population that used the service in a year
G2.4	<b>Quality of pedestrian and bicycle network.</b>	Standard	1% Analogy with Bikesharing service
		Information source	Numeric Regional Technical Map - Axes - Signage survey
		Assessment method	Ratio between the linear meters of the cycle/ pedestrian paths and inhabitants
		Standard	43 m/100 inhab - Average city data
G3.1	<b>Availability of a broadband communication network</b>	Information source	Technical Numeric Regional Map AGCOM mapping networks
		Assessment method	Ratio between the resident population and the population reached by the equivalent broadband according to the quality of the service.
		Standard	Italian broadband strategy
		Information source	Analysis of local services
G4.2	<b>Availability and proximity of key services</b>	Assessment method	Calculation of the population with a maximum of 800 meters walking distance from three services
		Standard	-
		Information source	Local analysis of services
		Assessment method	Calculation of the population with a maximum of 1000 meters walking distance from at least one service for the two categories, cultural and sports
G4.6	<b>Availability and proximity of leisure facilities</b>	Standard	-
		Information source	Project Urban gardens
		Assessment method	Percentage of the population within 1 km from urban vegetable garden
		Standard	-
G5.2	<b>Residents' access to and use of urban agricultural plots.</b>	Information source	Minutes of meetings, press articles, reports, initiatives
		Assessment method	Activity comparison with Sherry Arnstein scale
		Standard	-
		Information source	Minutes of meetings, press articles, reports, initiatives
G6.3	<b>Community involvement in urban planning activities</b>	Assessment method	Activity comparison with Sherry Arnstein scale
		Standard	-

# REGIONAL TOOL

## D.3.4.3 Regional Tool - EnvirobatBDM

Version 1.1

Date: March 2019

envirobatbdm

2.1: To raise capacity for better management of energy in public buildings at transnational level

Work package: WP3 TESTING

Activity: 3.4 Evaluation of test results

Deliverable: 3.4.3 – Regional CESBA MED SNTs

**Responsible Partner:** Andrea Moro, iiSBE Italia R&D

# URBAN SCALE ASSESSMENT

## SNTool structure

### A- BUILT URBAN SYSTEMS

<b>A1</b>	<b>Built urban systems</b>
<b>A1.7</b>	<i>Conservation of land</i>

### B- ECONOMY

<b>B3</b>	<b>Cost and investment</b>
<b>B3.3</b>	<i>Operating energy costs for public buildings</i>

### C- ENERGY

<b>C1</b>	<b>Non renewable energy</b>
<b>C1.1</b>	<i>Total final thermal energy consumption for building</i>
<b>C1.4</b>	<i>Total final electrical energy consumption for building operations</i>
<b>C1.7</b>	<i>Total primary energy demand for building operations</i>
<b>C2</b>	<b>Renewable and decarbonised energy</b>
<b>C2.1</b>	<i>Share of renewable energy on-site, relative to total final energy consumption for building operations</i>
<b>C2.7</b>	<i>Share of renewable energy on-site, relative to final electric energy consumption</i>

### D- ATMOSPHERIC EMISSIONS

<b>D1</b>	<b>Atmospheric emissions</b>
<b>D1.2</b>	<i>Total GHG emissions from primary energy used in building operations</i>

### E- NON - RENEWABLE RESOURCES

<b>E1</b>	<b>Potable water, stormwater and greywater</b>
<b>E1.6</b>	<i>Consumption of potable water for residential population</i>
<b>E1.7</b>	<i>Consumption of potable water for public non-residential building systems</i>

### F- ENVIRONMENT

<b>F1</b>	<b>Environmental impacts</b>
<b>F1.3</b>	<i>Recharge of groundwater through permeable paving or landscaping</i>
<b>F2</b>	<b>Outdoor environmental quality</b>
<b>F2.3</b>	<i>Ambient air quality with respect to particulates &lt;10µg (PM10) over a one-year period</i>

### G- SOCIAL ASPECTS

<b>G2</b>	<b>Traffic and mobility services</b>
<b>G2.1</b>	<i>Performance of the public transport system</i>
<b>G2.4</b>	<i>Quality of pedestrian and bicycle network</i>
<b>G4</b>	<b>Public and private facilities and services</b>
<b>G4.2</b>	<i>Availability and proximity of key services</i>
<b>G6</b>	<b>Management and community involvement</b>
<b>G6.3</b>	<i>Community involvement in urban planning activities</i>

## SNTool criteria selection rationale

### A- BUILT URBAN SYSTEMS

CRITERION	REASON/MOTIVATION
<b>A1.7</b>	<i>KPI are mandatory; KPI were sufficient for local purposes. The motivation is to share with partners a Passport that will allow us to discuss issues related to sustainable neighborhood assessment – despite the different local approaches.</i>

### B- ECONOMY

CRITERION	REASON/MOTIVATION
<b>B3.3</b>	<i>KPI are mandatory; KPI were sufficient for local purposes. The motivation is to share with partners a Passport that will allow us to discuss issues related to sustainable neighborhood assessment – despite the different local approaches.</i>

### C- ENERGY

CRITERION	REASON/MOTIVATION
<b>C1.1</b> <b>C1.4</b> <b>C1.7</b> <b>C2.1</b> <b>C2.7</b>	<i>KPI are mandatory; KPI were sufficient for local purposes. The motivation is to share with partners a Passport that will allow us to discuss issues related to sustainable neighborhood assessment – despite the different local approaches.</i>

### D- ATMOSPHERIC EMISSIONS

CRITERION	REASON/MOTIVATION
<b>D1.2</b>	<i>KPI are mandatory; KPI were sufficient for local purposes. The motivation is to share with partners a Passport that will allow us to discuss issues related to sustainable neighborhood assessment</i>

– despite the different local approaches.

E- NON - RENEWABLE RESOURCES	
CRITERION	REASON/MOTIVATION
E1.6	<i>KPI are mandatory; KPI were sufficient for local purposes. The motivation is to share with partners a Passport that will allow us to discuss issues related to sustainable neighborhood assessment – despite the different local approaches.</i>
E1.7	

F- ENVIRONMENT	
CRITERION	REASON/MOTIVATION
F1.3 F2.3	<i>KPI are mandatory; KPI were sufficient for local purposes. The motivation is to share with partners a Passport that will allow us to discuss issues related to sustainable neighborhood assessment – despite the different local approaches.</i>

G- SOCIAL ASPECTS	
CRITERION	REASON/MOTIVATION
G2.1 G2.4 G4.2 G6.3	<i>KPI are mandatory; KPI were sufficient for local purposes. The motivation is to share with partners a Passport that will allow us to discuss issues related to sustainable neighborhood assessment – despite the different local approaches.</i>

## SNTool weights rationale

### ISSUES WEIGHTS

ISSUE	WEIGHTING FACTOR (1 to 3)	MOTIVATION
A- BUILT URBAN SYSTEMS	2	Default values from CESBA MED PP were used
B- ECONOMY	2	Default values from CESBA MED PP were used
C- ENERGY	3	Default values from CESBA MED PP were used
D- ATMOSPHERIC EMISSIONS	3	Default values from CESBA MED PP were used

E- NON - RENEWABLE RESOURCES	2	Default values from CESBA MED PP were used
F- ENVIRONMENT	2	Default values from CESBA MED PP were used
G- SOCIAL ASPECTS	1	Default values from CESBA MED PP were used

## CATEGORIES WEIGHTS

CATEGORIES	WEIGHT (%)
A1- Urban Structure and Form	6,3
A2- Transportation Infrastructure	12,6
<b>SUB TOTAL</b>	<b>18,9</b>
B1- Economic Structure and Value	0
B2- Economic activity	0
B3- Cost and Investment	5
<b>SUB TOTAL</b>	<b>5</b>
C1- Non-renewable energy	22
C2- Renewable and Decarbonised energy	8,5
C3- Energy recycling and storage	0
<b>SUB TOTAL</b>	<b>30,5</b>
D1- Atmospheric emissions	23,6
<b>SUB TOTAL</b>	<b>23,6</b>
E1- Potable water, stormwater and greywater	3,4
E2- Solid and Liquid Wastes	0
E3- Resource consumption, retention and maintenance	0
<b>SUB TOTAL</b>	<b>3,4</b>
F1- Environmental impacts	3,8
F2- Outdoor environmental quality	5,7
F3- Ecosystems and landscapes	0
<b>SUB TOTAL</b>	<b>9,4</b>
G1- Safety and Accessibility	0
G2- Traffic and Mobility Services	4,7
G3- Communication services	0
G4- Public and private facilities and services	1,9

TOTAL		9,1				
TOTAL		100				

## SNTool benchmarks rationale

### A- URBAN STRUCTURE AND FORM

CRITERION	INDICATOR	UNIT OF MEASURE	BENCHMARK	RATIONALE
A1.7 Conservation of land	The total area of undeveloped land considered to be of value for ecological or agricultural purposes by relevant authorities, as a percent of the total local area.	%	0: 15% 3 : 20% 5: 30%	Results of a study by the agricultural Chamber for the local master plan + report on ecological continuities led by Marseille municipality

### B- ECONOMY

CRITERION	INDICATOR	UNIT OF MEASURE	BENCHMARK	RATIONALE
B3.3 Running costs energy for public buildings	Running cost of energy aggregated	Euro/m <sup>2</sup> .y ear	0: 14 3 : 7 5: 3,5	Hypothesis to establish the values of practices: a gymnasium of 2700 m <sup>2</sup> built with a high energy level, and a nursery of 900 m <sup>2</sup> new Mid value

### C- ENERGY

CRITERION	INDICATOR	UNIT OF MEASURE	BENCHMARK	RATIONALE
C1.1 Total final thermal energy consumption for building operations	Aggregated annual total final thermal energy consumption / gross floor area of all buildings	kWh/m <sup>2</sup> /y ear	0: 40 3 : 15 5: 0	Return on experience
C1.4 Total final electrical energy consumption for building operations	Aggregated annual total final electric energy consumption / Total gross floor area of all buildings	kWh/m <sup>2</sup> /y ear	0 : 12	Return on experience

			3 : 3 5 : 0	
<b>C1.7 Total primary energy demand for building operations.</b>	Buildings total primary energy consumption / local minimum value	kWh/m <sup>2</sup> /year	0 : 40 3 : 15 5 : 0	Levels from the future national building regulation called E+C- (Energy+ Carbon -) The levels depend on the building typology and constraints (geographic...) <i>Return on experience</i>
<b>C2.1 Share of thermal energy generation from on-site renewable sources on final thermal energy</b>	Share of renewable thermal energy in final thermal energy consumptions	%	0 : 25 3 : 80 5 : 100	
<b>C2.7 Share of electric energy generation from on-site renewable sources on final electric energy</b>	Share of renewable electric energy in final electric energy consumptions	%	0 : 25 3 : 100 5 : 200	<i>Return on experience</i>

## D- ATMOSPHERIC EMISSIONS

CRITERION	INDICATOR	UNIT OF MEASURE	BENCHMARK	RATIONALE
<b>D1.2 Total GHG Emissions from primary energy used in building operations</b>	CO2 equivalent emissions per useful internal floor area per year	kg CO2 eq./m <sup>2</sup> /yr	0 : 20 3 : 10 5 : 5	Regulation label

## E- NON-RENEWABLE RESOURCES

CRITERION	INDICATOR	UNIT OF MEASURE	BENCHMARK	RATIONALE
<b>E1.6 Consumption of potable water for residential population</b>	Water consumption per occupant	m <sup>3</sup> per occupant *yr	0 : 40 3 : 30 5 : 20	From study of TRIBU-ADEME
<b>E1.7 Consumption of potable water for non-residential building systems</b>	Water consumption per m <sup>2</sup>	m <sup>3</sup> per occupant *yr	0 : 5 3 : 3 5 : 2	From study of TRIBU-ADEME

F- ENVIRONMENT				
CRITERION	INDICATOR	UNIT OF MEASURE	BENCHMARK	RATIONALE
<b>F1.3 Recharge of groundwater through permeable paving or landscaping</b>	Permeable area / total area	%	0 : 20 3 : 50 5 : 70	AURA Montpellier

## SNTool Criteria Specifications

A- BUILT URBAN SYSTEMS		
CRITERION	INDICATOR	SPECIFICATIONS
A1.7 Conservation of land	The total area of undeveloped land considered	<i>Information source</i> Local study
		<i>Assessment method</i> <ol style="list-style-type: none"> <li>1. Determine the area of the neighborhood.</li> <li>2. Determine the undeveloped area of land that is considered by authorities to be of ecological and agricultural value.</li> <li>3. Calculate the ratio between the undeveloped area and the area of the neighborhood.</li> </ol>
		<i>Standard</i> Default values

B- ECONOMY		
CRITERION	INDICATOR	SPECIFICATIONS
B3.3 Running costs energy for public buildings	Running cost of energy aggregated	<i>Information source</i> Models and simulation
		<i>Assessment method</i> In the calculation it is possible to use real or estimated costs. The calculation has to take in account one full year of operation. Sum of the running energy costs of each building in the area up to an aggregated running costs energy value. The total cost must be normalized per the total indoor useful area of buildings.
		<i>Standard</i>

C- ENERGY			
CRITERION	INDICATOR	SPECIFICATIONS	
C1.1 Total final thermal energy consumption for building operations	Aggregated annual total final thermal energy consumption / gross floor area of all buildings	Information source	Models and simulation
		Assessment method	<p>Estimated data:</p> <ol style="list-style-type: none"> <li>1. Calculate the annual total final thermal energy consumption for building operations (heating, cooling, domestic hot water), in kWh, for each building in the local area.</li> <li>2. Calculate the aggregated annual total final thermal energy consumption for all buildings.</li> <li>3. Calculate: Aggregated annual total final thermal energy consumption / Total gross area of all buildings.</li> </ol> <p>Calculations are based on EN 13790 using the quasi-steady state monthly method  <a href="http://ec.europa.eu/energy/en/topics/energy-efficiency/buildings">ec.europa.eu/energy/en/topics/energy-efficiency/buildings</a>  <a href="https://www.iea.org/publications/freepublications/.../buildings_certification.pdf">https://www.iea.org/publications/freepublications/.../buildings_certification.pdf</a>  <a href="http://www.theicct.org/sites/default/files/.../ICCTupdate_EU-95gram_jan2014.pdf">www.theicct.org/sites/default/files/.../ICCTupdate_EU-95gram_jan2014.pdf</a>            NF EN ISO 52016 Performance énergétiques des bâtiments</p>
		Standard	
C1.4 Total final electrical energy consumption for building operations	Aggregated annual total final electric energy consumption / Total gross floor area of all	Information source	Models and simulation
		Assessment method	<p>Use of Estimated data:</p> <ol style="list-style-type: none"> <li>1. Calculate the annual total final electric energy consumption for building operations (heating, cooling, ventilation, auxiliaries, domestic hot water and lighting), in kWh, for each building in the local area (i.e. residential and non-residential).</li> <li>2. Calculate the aggregated annual total final electric energy consumption for all buildings.</li> <li>3. Calculate: aggregated annual total final electric energy consumption / total gross area of all buildings</li> </ol> <p>Calculations are based on EN 13790 using the quasi-steady state monthly method.</p>
		Standard	<p>The terminals are computable with the national thermal regulation for this final energy indicator assuming that all the energy of the building is electric (even heating and domestic hot water). Soone : the new RE2020 regulation</p>
C1.7 Total primary energy demand for building operations.	Buildings total primary energy consumption / local minimum value	Information source	Models and simulation
		Assessment method	<ol style="list-style-type: none"> <li>1. Calculate the annual total primary energy consumption of non-renewable energy for building operations (heating, cooling, ventilation, auxiliaries, domestic hot water and</li> </ol>

		lighting), in kWh/m <sup>2</sup> of useful internal floor area for each building in the local area (i.e. residential and non-residential). 2. Calculate urban area total primary energy consumption as the weighted mean value of total primary energy consumption over the floor surfaces of all buildings in the area. 3. Calculate: Buildings total primary energy consumption / local minimum value x 100 Calculations are based on EN 13790
		Standard
C2.1 Share of thermal energy generation from on-site renewable sources on final thermal energy	Share of renewable thermal energy in final thermal energy consumptions	Information source <i>Models and simulation</i>
		Assessment method Estimated data Calculate the annual total final thermal energy consumption for building operations (heating, cooling, domestic hot water), in kWh, for each building in the local area (i.e. residential and non-residential) including renewables, if applicable, in the existing condition. Calculate the aggregated annual total thermal final energy consumption for all buildings. Calculate the annual total final thermal energy consumption for building operations (heating, cooling, domestic hot water), in kWh, for each building in the local area (i.e. residential and non-residential) from on-site renewable energy sources. Calculate the aggregated annual total final thermal energy consumption from on-site renewable energy sources. Calculate: Aggregated annual total final thermal energy consumption from on-site renewable energy sources/ Aggregated annual total final thermal energy consumption.
		Standard Calculations are based on EN 13790.
C2.4 Share of renewable energy on-site, on total primary energy consumptions for buildings operation	Share of renewable energy in primary energy consumptions	Information source <i>Models and simulation</i>
		Assessment method 1. Calculate the annual total primary energy consumption for building operations (heating, cooling, domestic hot water and lighting), in kWh, for each building in the local area (i.e. residential and non-residential) including renewables, if applicable, in the existing condition. 2. Calculate the aggregated annual total primary energy consumption for all buildings. 3. Calculate the annual total primary energy consumption for building operations (heating, cooling, domestic hot water and lighting), in kWh, for each building in the local area (i.e. residential and non-residential) from on-site renewable energy sources, if applicable. 4. Calculate the aggregated annual total primary energy consumption from on-site renewable energy sources for all buildings. 5. Calculate: Aggregated annual total primary

C2.7 Share of electric energy generation from on-site renewable sources on final electric energy	Share of renewable electric energy in final electric energy consumptions		energy consumption / Aggregated annual total primary energy consumption without the renewables.
		Standard	Calculations are based on EN 13790
		Information source	Models and simulation
		Assessment method	<p>Use of Estimated data:</p> <ol style="list-style-type: none"> <li>1. Calculate the annual total final electric energy consumption for building operations (heating, cooling, domestic hot water, ventilation, lighting, auxiliaries), in kWh, for each building in the local area (i.e. residential and non-residential) including renewables, if applicable, in the existing condition.</li> <li>2. Calculate the aggregated annual total electric final energy consumption for all buildings.</li> <li>3. Calculate the annual total final electric energy consumption for building operations (heating, cooling, domestic hot water, lighting, ventilation, auxiliaries), in kWh, for each building in the local area (i.e. residential and non-residential) from on-site renewable energy sources, if applicable.</li> <li>4. Calculate the aggregated annual total final electric energy consumption from on-site renewable energy sources.</li> <li>5. Calculate: Aggregated annual total final electric energy consumption from on-site renewable energy sources/ Aggregated annual total final electric energy consumption.</li> </ol> <p>Calculations are based on EN 13790 using the quasi-steady state monthly method.</p>
		Standard	Calculations are based on EN 13790

## D- ATMOSPHERIC EMISSIONS

CRITERION	INDICATOR	SPECIFICATIONS	
D1.2 Total GHG Emissions from primary energy used in building operations	CO2 equivalent emissions per useful internal floor area per year	Information source	Models and simulation
		Assessment method	<p>For each building in the area calculate the emissions of CO2 eq. with the following formula:</p> $E = [\sum (Q_{fuel,i} \times LHV_i \times K_{em,i}) + (Q_{el} \times K_{em,el}) + (Q_{dh} \times K_{em,dh})]$ <p><math>Q_{fuel,i}</math> = annual quantity of i-th fuel (m3 or Kg)  <math>Q_{el}</math> = annual quantity of electric energy from the grid (kWh)  <math>Q_{dh}</math> = annual quantity of energy from district heating/cooling (kWh)  <math>LHV_i</math> = lower heating value of the i-th fuel (kWh/m3 or kWh/Kg)  <math>K_{em,i}</math> = CO2 eq. emission factor of the i-th fuel (Kg CO2/kWh)</p>

		<p> <i>Kem,i = CO2 eq. emission factor of the electric energy from the grid (Kg CO2/kWh)</i>  <i>Kem,i = CO2 eq. emission factor of energy from district heating/cooling (Kg CO2/kWh)</i>  <i>Calculate the aggregated annual total CO2 equivalent emissions from all buildings / total useful internal floor area of all buildings.</i>  <i>Aggregate GHG emissions from primary energy (including fossil fuel used to generate electricity and used directly in building equipment) for all purposes in building operations in the local area, in kg of CO2-eq per 1000 m2 of surface area per year.</i> </p>
	Standard	National Values of Emissions References Related to the Energy Mix

E- NON-RENEWABLE RESOURCES		
CRITERION	INDICATOR	SPECIFICATIONS
E1.6 Consumption of potable water for residential population	Water consumption per occupant	<p>Information source</p> <p>Models and simulation</p>
		<p>Assessment method</p> <p> <i>Calculate the estimated consumption of potable water used in residential households in the local area, in Litres per person per day (Lpp*yr.)</i>             1. For each building calculate the total water consumption. The principle of the per occupant water consumption calculation for taps, toilets and showers.            2. Calculate the aggregated annual total water consumptions from all residential buildings / number of residential buildings occupants.         </p>
		<p>Standard</p> <p>Tool "Water calculator"</p>
E1.7 Consumption of potable water for non-residential building systems	Water consumption per occupant	<p>Information source</p> <p>Models and simulation</p>
		<p>Assessment method</p> <p>           1) For each non-residential public building, collect the monitored annual water consumptions for building operation. The consumption data must be estimated taking the average over 3 years period (m<sup>3</sup>).            2) Sum the annual water consumption of each building up to an aggregated annual total water consumption (m<sup>3</sup>/year).            3) Estimate the area of public buildings considered for the calculation.            4) Calculate the indicator's value as: aggregated annual total water consumption / area of public buildings.         </p>

		Standard	Tool "Water calculator"
<b>E2.3 Solid waste from construction and demolition projects retained in the area for re-use or recycling</b>	Volume of materials that may be re-used or recycled from the local area on the total solid waste from construction and demolition of building projects	Information source	Studies, data banks
		Assessment method	<ol style="list-style-type: none"> <li>1. Identify the annual volume of construction/demolition waste generated over a 3-year period;</li> <li>2. Sample the waste stream to identify the origin (type of building) for each sample and the approximate proportion of materials that could have been recycled or re-used;</li> <li>3. Estimate the volume of material that could be re-used or recycled from future projects of the same type;</li> <li>4. Aggregate the volume of materials that may be re-used or recycled per year from the local area, based on current rates of construction and demolition;</li> <li>5. Calculate the volume of materials that may be re-used or recycled from the local area on the total solid waste from construction and demolition projects.</li> </ol>
		Standard	Life cycle analysis tools, 2020 environmental regulation with carbon level assessment
<b>E3.2 Consumption of non-renewable material resources for construction of infrastructure</b>	Quantity of materials from non-renewable material resources for construction or renovation of infrastructures in the local area over a 5-year period	Information source	Studies, data banks
		Assessment method	Calculate the aggregate consumption of non-renewable material resources for construction or renovation of infrastructure in the local area over a 5-year period, in tonnes per 1,000 m <sup>2</sup> of surface area (i.e roads, bridges, etc).
		Standard	Life cycle analysis tools, 2020 environmental regulation with carbon level assessment

F- ENVIRONMENT			
CRITERION	INDICATOR	SPECIFICATIONS	
<b>F1.3 Recharge of groundwater through permeable paving or landscaping</b>	Permeable area / total area	Information source	Area development plans
		Assessment method	<ol style="list-style-type: none"> <li>1. Calculate the size (Sa) of the urban area (m<sup>2</sup>).</li> <li>2. Calculate the size of the surfaces with a different paving or occupied by constructions in the urban area (i.e green areas, surfaces paved with asphalt, surfaces occupied by buildings, etc.).</li> <li>3. Calculate the real permeability of soil considering the permeability coefficient of each surface.</li> <li>4. Examples of permeability coefficients: Grass = 1 Gravel = 0,9 Permeable interlocking concrete pavement = 0,3</li> </ol>

			Asphalt = 0 5. Value of the indicator = $(S_{a,perm}/S_a) \times 100$
		Standard	Local context of the local plan of urban planning and habitat (PLU-H).
		Information source	Measured data
<b>F2.3 Ambient air quality with respect to particulates &lt;10 mu (PM10) over a one-year period.</b>	Number of days exceeding the daily limits in a year	Assessment method	1. Daily test air samples in accordance with national or regional procedures over a period of one year; 2. Evaluate the number of days exceeding the daily limits in a year.
		Standard	Observatory of the quality of the air <a href="http://www.atmo-auvergnerhonealpes.fr">www.atmo-auvergnerhonealpes.fr</a>

G- SOCIAL ASPECTS			
CRITERION	INDICATOR	SPECIFICATIONS	
		Information source	Measured data
<b>G2.1 Performance of the public transport service</b>	Percentage of inhabitants that are within 400 meters	Assessment method	1. Calculate the percentage of the inhabitants in the area that are within 400 meters walking distance of at least one public transportation service stop (bus, tram, metro). Note: to be considered valid for the calculation, a stop must have a daily total service frequency of at least 20 trips.
		Standard	Global Platform for Sustainable Cities - Urban Sustainability Framework
		Information source	Estimated data
<b>G2.4 Quality of pedestrian and bicycle network</b>	Total walkway meters of dedicated	Assessment method	1. Estimation of the number of inhabitants in the area 2. Calculation of the walkway meters of dedicated pedestrian paths in the area (A) 3. Calculation of the meters of bicycle paths in the area (B) 4. Calculation of the indicator's value as $(A+B)/(100 \text{ inhabitants})$ Bicycle paths and pedestrian paths have to be safe and physically separated to traffic roads to be considered in the calculation. A walkway adjacent to a traffic road is not acceptable.
		Standard	Global Platform for Sustainable Cities - Urban Sustainability Framework
<b>G4.2 Availability</b>	Percentage of	Information	Local implementation plans

<b>and proximity of key public human services</b>	inhabitants that are within 800	source	Assessment method	<p>1. Identify locations of key services in the local area.</p> <p>2. Calculate the percentage of the inhabitants that are within 800 meters walking distance from at least 3 key services.</p> <p>3. Calculate the percent of residential population located within 600 m. of the 3 key human services.</p> <p>Key services are:</p> <ol style="list-style-type: none"> <li>1. Education (schools, kindergartens, education centers, etc.)</li> <li>2. Health center (hospitals, medical ward, medical center, etc.)</li> <li>3. Law enforcement areas (police station, etc.)</li> <li>4. Sport facilities</li> <li>5. Food shops</li> <li>6. Bank</li> <li>7. Post office</li> <li>8. Pharmacy</li> <li>9. Shopping center</li> <li>10. Culture and leisure</li> </ol>
		Standard	<p>Global Platform for Sustainable Cities - Urban Sustainability Framework</p> <p>sustainable urban development in the Paris region: the light of participatory observation ", Development</p> <p>Sustainable Development and Territories [Online], Vol. 6, No. 2   September 2015, posted on September 30, 2015 "</p>	
		Information source	Local informations from owner, developer	
<b>G6.3 Community involvement in urban planning activities</b>	Level of involvement of users in urban planning	Assessment method	<p>Using the Sherry Arnstein ladder on citizen participation, rate the level of users' involvement on planning. The height rungs and 3 degrees of the ladder are provided on the picture.</p>	
		Standard	<p>"Sherry Arnstein, article original paru en 1969 ""A Ladder Of Citizen Participation"", Journal of the American Institute of Planners 35 (4), p. 216-24: <a href="http://www.participatorymethods.org/sites/participatorymethods.org/files/Arnstein%20ladder%201969.pdf">http://www.participatorymethods.org/sites/participatorymethods.org/files/Arnstein%20ladder%201969.pdf</a>"</p>	

# REGIONAL TOOL

## D.3.4.3 Regional Tool – AURA-EE

Version 1.1

Date: March 2019

2.1: To raise capacity for better management of energy in public buildings at transnational level

Work package: WP3 TESTING

Activity: 3.4 Evaluation of test results

Deliverable: 3.4.3 – Regional CESBA MED SNTs

**Responsible Partner:** Andrea Moro, iiSBE Italia R&D

## SNTool benchmarks rationale

A- URBAN STRUCTURE AND FORM				
CRITERION	INDICATOR	UNIT OF MEASURE	BENCHMARK	RATIONALE

<b>A1.7 Conservation of land</b>	<i>The total area of undeveloped land considered to be of value for ecological or agricultural purposes by relevant authorities, as a percent of the total local area.</i>	%	0: 10%	Local planning rules
			3: 16% 5: 20%	Mid value Local planning rules

B- ECONOMY				
CRITERION	INDICATOR	UNIT OF MEASURE	BENCHMARK	RATIONALE
<b>B3.3 Running costs energy for public buildings</b>	Running cost of energy aggregated	Euro/m <sup>2</sup> /year	0: 14	Hypothesis to establish the values of practices: a gymnasium of 2700 m <sup>2</sup> built with a high energy level, and a nursery of 900 m <sup>2</sup> new
			3: 7,7 5: 3,5	Mid value

C- ENERGY				
CRITERION	INDICATOR	UNIT OF MEASURE	BENCHMARK	RATIONALE
<b>C1.1 Total final thermal energy consumption for building operations</b>	Aggregated annual total final thermal energy consumption / gross floor area of all buildings	kWh/m <sup>2</sup> /year	0: 50	Default values from CESBA MED PP's were relevant
			3: 20 5: 0	Mid value Default values from CESBA MED PP's were relevant
<b>C1.4 Total final electrical energy consumption for building operations</b>	Aggregated annual total final electric energy consumption / Total gross floor area of all buildings	kWh/m <sup>2</sup> /year	0: 55	Value Score 0 : Result new collective dwellings RT2012: New: Compliance with the new thermal regulations to come: RE 2020, level E1, respect for the share of electricity
			3: 25 5: 5	Mid value New: RE 2020, level E4, respect of the share of electricity
<b>C1.7 Total primary energy demand for building operations.</b>	Buildings total primary energy consumption / local minimum value	kWh/m <sup>2</sup> /year	0: 140 3: 56 5: 0	Result new collective dwellings RT2012 Mid value Result new collective dwellings RT2012
<b>C2.1 Share of thermal energy</b>	Share of renewable	%	0: 30 3: 80	Sustainable Cities Guide

generation from on-site renewable sources on final thermal energy	thermal energy in final thermal energy consumptions		5 : 100	
<b>C2.4 Share of renewable energy on-site, on total primary energy consumptions for buildings operation</b>	Share of renewable energy in primary energy consumptions	%	0 : 30 3 : 80 5 : 100	Sustainable Cities Guide
<b>C2.7 Share of electric energy generation from on-site renewable sources on final electric energy</b>	Share of renewable electric energy in final electric energy consumptions	%	0 : 35 3 : 59 5 : 75	Sustainable Cities Guide

## D- ATMOSPHERIC EMISSIONS

CRITERION	INDICATOR	UNIT OF MEASURE	BENCHMARK	RATIONALE
<b>D1.2 Total GHG Emissions from primary energy used in building operations</b>	CO <sub>2</sub> equivalent emissions per useful internal floor area per year	kg CO <sub>2</sub> eq./m <sup>2</sup> /yr	0 : 30 3 : 18 5 : 10	Default values from CESBA MED PPs were relevant Mid value Default values from CESBA MED PPs were relevant

## E- NON-RENEWABLE RESOURCES

CRITERION	INDICATOR	UNIT OF MEASURE	BENCHMARK	RATIONALE
<b>E1.6 Consumption of potable water for residential population</b>	Water consumption per occupant	m <sup>3</sup> per occupant* yr	0 : 68 3 : 50 5 : 30	187 liters, 365 days of presence 150 liters, no bath, lower tap flow, 335 days of presence 90 liters, 335 days of presence
<b>E1.7 Consumption of potable water for non-residential building systems</b>	Water consumption per m <sup>2</sup>	m <sup>3</sup> per m <sup>2</sup>	0 : 1,1 3 : 0,55 5 : 0,4	Use of the water calculator tool for offices, estimate with 200 users
<b>E2.3 Solid waste from construction and demolition projects retained in the area for re-use or recycling</b>	Volume of materials that may be re-used or recycled from the local area on the total solid waste from construction and demolition of building projects	%	0 : 50 3 : 68 5 : 80	Hypothesis: reuse of possible materials on projects Mid value Hypothesis: reuse of possible materials on projects
<b>E3.2 Consumption of non-renewable</b>	Quantity of materials from non-renewable	Tonnes/ 1000 m <sup>2</sup>	0 : 150 3 : 108	Default values from CESBA MED PPs were relevant

<b>material resources for construction of infrastructure</b>	material resources for construction or renovation of infrastructures in the local area over a 5-year period	5 : 80
--	---	--------

## F- ENVIRONMENT

CRITERION	INDICATOR	UNIT OF MEASURE	BENCHMARK	RATIONALE
<b>F1.3 Recharge of groundwater through permeable paving or landscaping</b>	Permeable area / total area	%	0 : 20 3 : 68 5 : 100	The values given for practice are default values, to be adapted to the local context (local plan of urban planning and habitat PLU-H).
<b>F2.3 Ambient air quality with respect to particulates &lt;10 mu (PM10) over a one-year period.</b>	Number of days exceeding the daily limits in a year	n	0 : 30 3 : 18,6 5 : 11	Observatory of the quality of the air www.atmo-auvergnerhonealpes.fr

## G- SOCIAL ASPECTS

CRITERION	INDICATOR	UNIT OF MEASURE	BENCHMARK	RATIONALE
<b>G2.1 Performance of the public transport service</b>	Percentage of inhabitants that are within 400 meters walking distance of at least one public transportation service stop.	%	0 : 0 3 : 100 5 : 100	Global Platform for Sustainable Cities - Urban Sustainability Framework. Sustainable Cities Guide.
<b>G2.4 Quality of pedestrian and bicycle network</b>	Total walkway meters of dedicated pedestrian paths and meters of bicycle path per 100 inhabitants.	m/100 inhabitants	0 : 200 3 : 110 5 : 50	Global Platform for Sustainable Cities - Urban Sustainability Framework
<b>G4.2 Availability and proximity of key public human services</b>	Percentage of inhabitants that are within 800 meters walking distance of at least 3 key services	%	0 : 30 3 : 72 5 : 100	Global Platform for Sustainable Cities - Urban Sustainability Framework Sustainable Cities Guide

<b>G6.3 Community involvement in urban planning activities</b>	Level of involvement of users in urban planning	Level	<p>0 : Symbolic participation (Arnstein correspondence: information and consultation): consultation (public register, survey ...)</p> <p>3 : Shared diagnosis (Correspondence Arnstein: Degrees of citizen power): Methodology of shared diagnosis, call to a specialized provider, survey (s), Workshops of construction and validation of the diagnosis</p> <p>5 : Co-decision (Arnstein Correspondence: Degrees of Citizen Power): Methodology of the process, call for a specialized service provider, dedicated workshops, existence of scenarios for discussion, evolution of the project according to citizen feedback</p>
--	---	-------	---

## SNTool Criteria Specifications

A- BUILT URBAN SYSTEMS			
CRITERION	INDICATOR	SPECIFICATIONS	
<b>A1.7 Conservation of land</b>	The total area of undeveloped land considered	Information source	Local planning rules
		Assessment method	<ol style="list-style-type: none"> <li>1. Determine the area of the neighborhood.</li> <li>2. Determine the undeveloped area of land that is considered by authorities to be of ecological and agricultural value.</li> <li>3. Calculate the ratio between the undeveloped area and the area of the neighborhood.</li> </ol>
		Standard	Default values

B- ECONOMY			
CRITERION	INDICATOR	SPECIFICATIONS	
<b>B3.3 Running costs energy for public buildings</b>	Running cost of energy aggregated	Information source	Models and simulation
		Assessment method	<p>In the calculation it is possible to use real or estimated costs. The calculation has to take in account one full year of operation.</p> <p>Sum of the running energy costs of each building in the area up to an aggregated running costs energy value. The total cost must be normalized per the total indoor useful area</p>
		Standard	

of buildings.

C- ENERGY		
CRITERION	INDICATOR	SPECIFICATIONS
C1.1 Total final thermal energy consumption for building operations	Aggregated annual total final thermal energy consumption / gross floor area of all buildings	Information source
		Models and simulation
		Assessment method
C1.4 Total final electrical energy consumption for building operations	Aggregated annual total final electric energy consumption / Total gross floor area of all	Information source
		Models and simulation
		Assessment method
		Standard

<b>C1.7 Total primary energy demand for building operations.</b>	Buildings total primary energy consumption / local minimum value	Information source	<i>Models and simulation</i>
		Assessment method	1. Calculate the annual total primary energy consumption of non-renewable energy for building operations (heating, cooling, ventilation, auxiliaries, domestic hot water and lighting), in kWh/m <sup>2</sup> of useful internal floor area for each building in the local area (i.e. residential and non-residential). 2. Calculate urban area total primary energy consumption as the weighted mean value of total primary energy consumption over the floor surfaces of all buildings in the area. 3. Calculate: Buildings total primary energy consumption / local minimum value x 100
		Standard	Calculations are based on EN 13790
<b>C2.1 Share of thermal energy generation from on-site renewable sources on final thermal energy</b>	Share of renewable thermal energy in final thermal energy consumptions	Information source	<i>Models and simulation</i>
		Assessment method	Estimated data Calculate the annual total final thermal energy consumption for building operations (heating, cooling, domestic hot water), in kWh, for each building in the local area (i.e. residential and non-residential) including renewables, if applicable, in the existing condition. Calculate the aggregated annual total thermal final energy consumption for all buildings. Calculate the annual total final thermal energy consumption for building operations (heating, cooling, domestic hot water), in kWh, for each building in the local area (i.e. residential and non-residential) from on-site renewable energy sources. Calculate the aggregated annual total final thermal energy consumption from on-site renewable energy sources. Calculate: Aggregated annual total final thermal energy consumption from on-site renewable energy sources / Aggregated annual total final thermal energy consumption.
		Standard	Calculations are based on EN 13790.
<b>C2.4 Share of renewable energy on-site, on total primary energy consumptions for buildings operation</b>	Share of renewable energy in primary energy consumptions	Information source	<i>Models and simulation</i>
		Assessment method	1. Calculate the annual total primary energy consumption for building operations (heating, cooling, domestic hot water and lighting), in kWh, for each building in the local area (i.e. residential and non-residential) including renewables, if applicable, in the existing condition. 2. Calculate the aggregated annual total primary energy consumption for all buildings. 3. Calculate the annual total primary energy consumption for building operations (heating,

C2.7 Share of electric energy generation from on-site renewable sources on final electric energy	Share of renewable electric energy in final electric energy consumptions		cooling, domestic hot water and lighting), in kWh, for each building in the local area (i.e. residential and non-residential) from on-site renewable energy sources, if applicable. 4. Calculate the aggregated annual total primary energy consumption from on-site renewable energy sources for all buildings. 5. Calculate: Aggregated annual total primary energy consumption / Aggregated annual total primary energy consumption without the renewables.
		Standard	Calculations are based on EN 13790
		Information source	Models and simulation
C2.7 Share of electric energy generation from on-site renewable sources on final electric energy	Share of renewable electric energy in final electric energy consumptions	Assessment method	Use of Estimated data: 1. Calculate the annual total final electric energy consumption for building operations (heating, cooling, domestic hot water, ventilation, lighting, auxiliaries), in kWh, for each building in the local area (i.e. residential and non-residential) including renewables, if applicable, in the existing condition. 2. Calculate the aggregated annual total electric final energy consumption for all buildings. 3. Calculate the annual total final electric energy consumption for building operations (heating, cooling, domestic hot water, lighting, ventilation, auxiliaries), in kWh, for each building in the local area (i.e. residential and non-residential) from on-site renewable energy sources, if applicable. 4. Calculate the aggregated annual total final electric energy consumption from on-site renewable energy sources. 5. Calculate: Aggregated annual total final electric energy consumption from on-site renewable energy sources/ Aggregated annual total final electric energy consumption. Calculations are based on EN 13790 using the quasi-steady state monthly method.
		Standard	Calculations are based on EN 13790

D- ATMOSPHERIC EMISSIONS			
CRITERION	INDICATOR	SPECIFICATIONS	
D1.2 Total GHG Emissions from primary energy used in building operations	CO2 equivalent emissions per useful internal floor area per year	Information source	Models and simulation
		Assessment method	For each building in the area calculate the emissions of CO2 eq. with the following formula: $E = [\sum (Q_{fuel,i} \times LHV_i \times K_{em,i}) + (Q_{el} \times K_{em,el}) + (Q_{dh} \times K_{em,dh})]$ $Q_{fuel,i}$ = annual quantity of i-th fuel (m3 or

		<p>Kg)</p> <p><math>Q_{el}</math> = annual quantity of electric energy from the grid (kWh)</p> <p><math>Q_{dh}</math> = annual quantity of energy from district heating/cooling (kWh)</p> <p><math>LHV_i</math> = lower heating value of the <math>i</math>-th fuel (kWh/m<sup>3</sup> or kWh/Kg)</p> <p><math>K_{em,i}</math> = CO<sub>2</sub> eq. emission factor of the <math>i</math>-th fuel (Kg CO<sub>2</sub>/kWh)</p> <p><math>K_{em,i}</math> = CO<sub>2</sub> eq. emission factor of the electric energy from the grid (Kg CO<sub>2</sub>/kWh)</p> <p><math>K_{em,i}</math> = CO<sub>2</sub> eq. emission factor of energy from district heating/cooling (Kg CO<sub>2</sub>/kWh)</p> <p>Calculate the aggregated annual total CO<sub>2</sub> equivalent emissions from all buildings / total useful internal floor area of all buildings.</p> <p>Aggregate GHG emissions from primary energy (including fossil fuel used to generate electricity and used directly in building equipment) for all purposes in building operations in the local area, in kg of CO<sub>2</sub>-eq per 1000 m<sup>2</sup> of surface area per year.</p>
	Standard	National Values of Emissions References Related to the Energy Mix

E- NON-RENEWABLE RESOURCES			
CRITERION	INDICATOR	SPECIFICATIONS	
E1.6 Consumption of potable water for residential population	Water consumption per occupant	Information source	Models and simulation
		Assessment method	<p>Calculate the estimated consumption of potable water used in residential households in the local area, in Litres per person per day (<math>L_{pp} \cdot yr.</math>)</p> <p>1. For each building calculate the total water consumption. The principle of the per occupant water consumption calculation for taps, toilets and showers.</p> <p>2. Calculate the aggregated annual total water consumptions from all residential buildings / number of residential buildings occupants.</p>
		Standard	Tool "Water calculator"
E1.7 Consumption of potable water for non-residential building systems	Water consumption per occupant	Information source	Models and simulation
		Assessment method	1) For each non-residential public building, collect the monitored annual water consumptions for building operation. The consumption data must be estimated taking

			<p>the average over 3 years period (m<sup>3</sup>).</p> <p>2) Sum the annual water consumption of each building up to an aggregated annual total water consumption (m<sup>3</sup>/year).</p> <p>3) Estimate the area of public buildings considered for the calculation.</p> <p>4) Calculate the indicator's value as: aggregated annual total water consumption / area of public buildings.</p>
		Standard	Tool "Water calculator"
<b>E2.3 Solid waste from construction and demolition projects retained in the area for re-use or recycling</b>	Volume of materials that may be re-used or recycled from the local area on the total solid waste from construction and demolition of building projects	Information source	Studies, data banks
		Assessment method	<ol style="list-style-type: none"> <li>1. Identify the annual volume of construction/demolition waste generated over a 3-year period;</li> <li>2. Sample the waste stream to identify the origin (type of building) for each sample and the approximate proportion of materials that could have been recycled or re-used;</li> <li>3. Estimate the volume of material that could be re-used or recycled from future projects of the same type;</li> <li>4. Aggregate the volume of materials that may be re-used or recycled per year from the local area, based on current rates of construction and demolition;</li> <li>5. Calculate the volume of materials that may be re-used or recycled from the local area on the total solid waste from construction and demolition projects.</li> </ol>
		Standard	Life cycle analysis tools, 2020 environmental regulation with carbon level assessment
<b>E3.2 Consumption of non-renewable material resources for construction of infrastructure</b>	Quantity of materials from non-renewable material resources for construction or renovation of infrastructures in the local area over a 5-year period	Information source	Studies, data banks
		Assessment method	Calculate the aggregate consumption of non-renewable material resources for construction or renovation of infrastructure in the local area over a 5-year period, in tonnes per 1,000 m <sup>2</sup> of surface area (i.e roads, bridges, etc).
		Standard	Life cycle analysis tools, 2020 environmental regulation with carbon level assessment

F- ENVIRONMENT			
CRITERION	INDICATOR	SPECIFICATIONS	
<b>F1.3 Recharge of groundwater through permeable paving or landscaping</b>	Permeable area / total area	Information source	Area development plans
		Assessment method	<ol style="list-style-type: none"> <li>1. Calculate the size (Sa) of the urban area (m<sup>2</sup>).</li> <li>2. Calculate the size of the surfaces with a different paving or occupied by constructions in the urban area (i.e green areas, surfaces paved with asphalt,</li> </ol>

		<p>surfaces occupied by buildings, etc.).</p> <p>3. Calculate the real permeability of soil considering the permeability coefficient of each surface.</p> <p>4. Examples of permeability coefficients: Grass = 1 Gravel = 0,9 Permeable interlocking concrete pavement = 0,3 Asphalt = 0</p> <p>5. Value of the indicator = <math>(S_{a,perm}/S_a) \times 100</math></p>
	Standard	Local context of the local plan of urban planning and habitat (PLU-H).

	Information source	Measured data
<b>F2.3 Ambient air quality with respect to particulates &lt;10 mu (PM10) over a one-year period.</b>	Assessment method	<p>1. Daily test air samples in accordance with national or regional procedures over a period of one year;</p> <p>2. Evaluate the number of days exceeding the daily limits in a year.</p>
Number of days exceeding the daily limits in a year	Standard	Observatory of the quality of the air <a href="http://www.atmo-auvergnerhonealpes.fr">www.atmo-auvergnerhonealpes.fr</a>

G- SOCIAL ASPECTS		
CRITERION	INDICATOR	SPECIFICATIONS

		Information source	Measured data
<b>G2.1 Performance of the public transport service</b>	Percentage of inhabitants that are within 400 meters	Assessment method	<p>1. Calculate the percentage of the inhabitants in the area that are within 400 meters walking distance of at least one public transportation service stop (bus, tram, metro).</p> <p>Note: to be considered valid for the calculation, a stop must have a daily total service frequency of at least 20 trips.</p>
		Standard	Global Platform for Sustainable Cities - Urban Sustainability Framework

		Information source	Estimated data
<b>G2.4 Quality of pedestrian and bicycle network</b>	Total walkway meters of dedicated	Assessment method	<p>1. Estimation of the number of inhabitants in the area</p> <p>2. Calculation of the walkway meters of dedicated pedestrian paths in the area (A)</p> <p>3. Calculation of the meters of bicycle paths in the area (B)</p> <p>4. Calculation of the indicator's value as <math>(A+B)/(100 \text{ inhabitants})</math></p>

			<p>Bicycle paths and pedestrian paths have to be safe and physically separated to traffic roads to be considered in the calculation. A walkway adjacent to a traffic road is not acceptable.</p>
		Standard	Global Platform for Sustainable Cities - Urban Sustainability Framework
		Information source	Local implementation plans
<b>G4.2 Availability and proximity of key public human services</b>	Percentage of inhabitants that are within 800	Assessment method	<p>1. Identify locations of key services in the local area.</p> <p>2. Calculate the percentage of the inhabitants that are within 800 meters walking distance from at least 3 key services.</p> <p>3. Calculate the percent of residential population located within 600 m. of the 3 key human services.</p> <p>Key services are:</p> <ol style="list-style-type: none"> <li>1. Education (schools, kindergartens, education centers, etc.)</li> <li>2. Health center (hospitals, medical ward, medical center, etc.)</li> <li>3. Law enforcement areas (police station, etc.)</li> <li>4. Sport facilities</li> <li>5. Food shops</li> <li>6. Bank</li> <li>7. Post office</li> <li>8. Pharmacy</li> <li>9. Shopping center</li> <li>10. Culture and leisure</li> </ol>
		Standard	<p>Global Platform for Sustainable Cities - Urban Sustainability Framework</p> <p>sustainable urban development in the Paris region: the light of participatory observation ", Development</p> <p>Sustainable Development and Territories [Online], Vol. 6, No. 2   September 2015, posted on September 30, 2015 "</p>
		Information source	Local informations from owner, developer
<b>G6.3 Community involvement in urban planning activities</b>	Level of involvement of users in urban planning	Assessment method	<p>Using the Sherry Arnstein ladder on citizen participation, rate the level of users' involvement on planning. The height rungs and 3 degrees of the ladder are provided on the picture.</p>
		Standard	<p>"Sherry Arnstein, article original paru en 1969 ""A Ladder Of Citizen Participation"", Journal of the American Institute of Planners 35 (4), p. 216-24: <a href="http://www.participatorymethods.org/sites/participatorymethods.org/files/Arnstein%20ladder%201969.pdf">http://www.participatorymethods.org/sites/participatorymethods.org/files/Arnstein%20ladder%201969.pdf</a>"</p>

# REGIONAL TOOL

## D.3.4.3 Regional Tool - GENCAT

Version 1.1

Date: March 2019

Generalitat de Catalunya  
**Departament de Territori  
i Sostenibilitat**

2.1: To raise capacity for better management of energy in public buildings at transnational level

Work package: WP3 TESTING

Activity: 3.4 Evaluation of test results

Deliverable: 3.4.3 – Regional CESBA MED SNTs

**Responsible Partner:** Andrea Moro, iiSBE Italia R&D

# URBAN SCALE ASSESSMENT

## SNTool structure

### A- BUILT URBAN SYSTEMS

#### A1 Urban Structure and Form

A1.2 Urban compactness.

A1.4 Residential density.

A1.7 Conservation of Land.

### B- ECONOMY

#### B1 Economic Structure and Value

B1.1 Affordability of housing property..

B1.2 Affordability of housing rental.

#### B2 Economic activity

B2.5 Economic contribution from tourism activity.

#### B3 Cost and Investment

B3.2 Public contribution in residential retrofitting investments.

B3.3 Operating energy costs for public buildings.

### C- ENERGY

#### C1 Non-renewable energy

C1.1 Total final thermal energy consumption for building operations.

C1.4 Total final electrical energy consumption for building operations.

C1.7 Total primary energy demand for building operations.

C1.10 Primary energy for heating - residential buildings.

C1.12 Primary energy for cooling - residential buildings.

C1.20 Energy consumption of public lighting.

#### C2 Renewable and Decarbonised energy

C2.1 Share of renewable energy on-site, on total final energy consumptions for buildings operation.

C2.4 Share of renewable energy on-site, on total primary energy consumptions for buildings operation.

C2.7 Share of electric energy generation from on-site renewable sources on final electric energy.

### D- ATMOSPHERIC EMISSIONS

#### D1 Atmospheric emissions

D1.2 GHG emissions from energy used for all purposes in building operations.

### E- NON - RENEWABLE RESOURCES

#### E1 Potable water, stormwater and greywater.

E1.6 Consumption of potable water for residential population.

E1.7	Consumption of potable water for non-residential building systems.
E2	<b>Solid and Liquid Wastes</b>
E2.1	Solid waste and recycling collection points.

F- ENVIRONMENT	
F1	<b>Environmental impacts</b>
F1.3	Recharge of groundwater through permeable paving or landscaping.
F2	<b>Outdoor environmental quality</b>
F2.3	Ambient air quality with respect to particulates <10 mu (PM10) over a one-year period.
F2.10	Ambient daytime noise conditions.
F2.11	Ambient night-time noise conditions.
F3	<b>Ecosystems and landscapes</b>
F3.1	Green zones & recreation areas availability.
F3.2	Green zones & recreation areas accessibility.
F3.3	Green zones & recreation areas density.

G- SOCIAL ASPECTS	
G1	<b>Safety and Accessibility</b>
G1.4	Ease of access to and use of public transport for physically disabled persons.
G2	<b>Traffic and Mobility Services</b>
G2.1	Performance of the public transport service.
G2.4	Quality of pedestrian and bicycle network.
G4	<b>Public and private facilities and services</b>
G4.2	Availability and proximity of key public human services.
G6	<b>Management and community involvement</b>
G6.3	Community involvement in urban planning activities.

## SNTool criteria selection rationale

A- BUILT URBAN SYSTEMS	
CRITERION	REASON/MOTIVATION
A1.2 Urban compactness	Assess the current use of the land
A1.4 Residential density	Assess the population density in the area to avoid great density zones
A1.7 Conservation of Land	Mandatory KPI

B- ECONOMY	
CRITERION	REASON/MOTIVATION
B1.1 Affordability of housing property	Assess the ratio between the income of the residents and the properties price to avoid an increase price
B1.2 Affordability of housing rental	Assess the ratio between the income of the residents and the rental price to avoid an increase price
B2.5 Economic contribution from tourism activity.	Assess the income from tourism activity in the

B3.2	Public contribution in residential retrofitting investments.	area Assess the public investment
B3.3	Operating energy costs for public buildings.	Mandatory KPI

## C- ENERGY

CRITERION	REASON/MOTIVATION
C1.1 Total final thermal energy consumption for building operations.	Mandatory KPI
C1.4 Total final electrical energy consumption for building operations.	Mandatory KPI
C1.7 Total primary energy demand for building operations.	Mandatory KPI
C1.10 Primary energy for heating - residential buildings.	Assess the ratio of the thermal consumption for heating in residential buildings
C1.12 Primary energy for cooling - residential buildings.	Assess the ratio of the electric consumption for heating in residential buildings
C1.20 Energy consumption of public lighting.	Assess the energy consumption of the public lighting systems and the ratio between energy consumption and resident
C2.1 Share of renewable energy on-site, on total final energy consumptions for buildings operation.	Mandatory KPI
C2.4 Share of renewable energy on-site, on total primary energy consumptions for buildings operation.	Mandatory KPI
C2.7 Share of electric energy generation from on-site renewable sources on final electric energy.	Mandatory KPI

## D- ATMOSPHERIC EMISSIONS

CRITERION	REASON/MOTIVATION
D1.2 GHG emissions from energy used for all purposes in building operations.	Mandatory KPI

## E- NON - RENEWABLE RESOURCES

CRITERION	REASON/MOTIVATION
E1.6 Consumption of potable water for residential population.	Mandatory KPI
E1.7 Consumption of potable water for non-residential building systems.	Mandatory KPI
E2.1 Solid waste and recycling collection points.	Assess the availability of the recycling collection points for the residents in the area

## F- ENVIRONMENT

CRITERION	REASON/MOTIVATION
-----------	-------------------

F1.3 Recharge of groundwater through permeable paving or landscaping.	Mandatory KPI
F2.3 Ambient air quality with respect to particulates <10 mu (PM10) over a one-year period.	Mandatory KPI
F2.10 Ambient daytime noise conditions.	Assess the day noise level in the area to avoid
F2.11 Ambient night-time noise conditions.	Assess the night noise level in the area
F3.1 Green zones & recreation areas availability.	Assess the availability of green zones
F3.2 Green zones & recreation areas accessibility.	Assess the accessibility of green zones
F3.3 Green zones & recreation areas density.	Assess the ratio between the green areas and the gross area

G- SOCIAL ASPECTS	
CRITERION	REASON/MOTIVATION
G1.4 Ease of access to and use of public transport for physically disabled persons.	Assess the reduction and elimination the architectonic barriers to access the public transport
G2.1 Performance of the public transport service.	Mandatory KPI
G2.4 Quality of pedestrian and bicycle network.	Mandatory KPI
G4.2 Availability and proximity of key public human services.	Mandatory KPI
G6.3 Community involvement in urban planning activities.	Mandatory KPI

## SNTool weights rationale

### ISSUES WEIGHTS

ISSUE	WEIGHTING FACTOR (1 to 3)	MOTIVATION
A- BUILT URBAN SYSTEMS	1	Consultation with Local Committee Members
B- ECONOMY	2	Economically unsustainable cities. This point is important to improve it. Consultation with Local Committee Members
C- ENERGY	3	This is a strategic axis with greater opportunity for action and improvement of results and directly linked to CO <sub>2</sub> emissions to reduce in the Climate and energy framework 2030. It is considered top priority. Consultation with Local Committee Members
D- ATMOSPHERIC EMISSIONS	3	It is the environmental consequence of issue C. This axis closely linked to the axis C, with the same impact and possibilities of action (Climate and energy framework 2030). It is considered top priority. Consultation with Local Committee Members

<b>E- NON - RENEWABLE RESOURCES</b>	1	Consultation with Local Committee Members
<b>F- ENVIRONMENT</b>	3	It is very important due to directly affect the health of people. It is considered top priority. Consultation with Local Committee Members
<b>G- SOCIAL ASPECTS</b>	2	It is not considered priority, although it is important because it takes into consideration the relationship of people with the area. Consultation with Local Committee Members

## CATEGORIES WEIGHTS

*Note: the categories weight results automatically from the criteria level*

CATEGORIES	WEIGHT (%)

## SNTool benchmarks rationale

### A- URBAN STRUCTURE AND FORM

CRITERION	INDICATOR	UNIT OF	BENCHMARK	RATIONALE
-----------	-----------	---------	-----------	-----------

MEASURE				
A1.2	Urban compactness	m <sup>3</sup> /m <sup>2</sup>	0: 10	Minimum value
			5: 40	Increase the urban compactness in the area according to the Urban planning
A1.4	Residential density	pp/ha	0: 125	--
			5: 350	Reduce the residential density in the area according to the Urban planning
A1.7	Conservation of Land	%	0: 4	Minimum value desired
			5: 15	Increase the green zones in the area according to the Urban planning

## B- ECONOMY

CRITERION	INDICATOR	UNIT OF MEASURE	BENCHMARK	RATIONALE
B1.1	Affordability of housing property	%	0: 30	--
			5: 20	Maximum value desired
B1.2	Affordability of housing rental.	%	0: 30	--
			5: 20	Maximum value desired
B2.5	Economic contribution from tourism activity.	€/resident	0: 250	--
			5: 1000	--
B3.2	Public contribution in residential retrofitting investments.	%	0: 40	--
			5: 25	--
B3.3	Operating energy costs for public buildings.	€/m <sup>2</sup> /y	0: 20	Maximum value desired
			5: 10	Passive or NZEB Building

## C- ENERGY

CRITERION	INDICATOR	UNIT OF MEASURE	BENCHMARK	RATIONALE
C1.1	Total final thermal energy consumption for building operations.	kWh/m <sup>2</sup> /y	0: 75	Maximum value desired
			5: 20	Passive or NZEB Building
C1.4	Total final electrical energy consumption for building operations.	kWh/m <sup>2</sup> /y	0: 70	Maximum value desired
			5: 20	Passive or NZEB Building
C1.7	Total primary energy	kWh/m <sup>2</sup> /y	0: 225	Maximum value desired

	demand for building operations.		5: 70	Minimum value desired
C1.10	Primary energy for heating - residential buildings.	%	0: 100	Local minimum value
			5: 70	Value desired
C1.12	Primary energy for cooling - residential buildings.	%	0: 100	Local minimum value
			5: 60	Value desired
C1.20	Energy consumption of public lighting.	kWp/pp	0: 50	Current index
			5: 20	Value desired
C2.1	Share of renewable energy on-site, on total final energy consumptions for buildings operation.	%	0: 25	Value desired
			5: 90	Passive or NZEB Building
C2.4	Share of renewable energy on-site, on total primary energy consumptions for buildings operation.	%	0: 30	Value desired
			5: 80	Passive or NZEB Building
C2.7	Share of electric energy generation from on-site renewable sources on final electric energy.	%	0: 15	Value desired
			5: 75	Passive or NZEB Building

## D- ATMOSPHERIC EMISSIONS

CRITERION	INDICATOR	UNIT OF MEASURE	BENCHMARK	RATIONALE
D1.2	GHG emissions from energy used for all purposes in building operations.	kg CO <sub>2</sub> eq /m <sup>2</sup> /y	0: 30	Current value
			5: 10	Passive or NZEB Building

## E- NON-RENEWABLE RESOURCES

CRITERION	INDICATOR	UNIT OF MEASURE	BENCHMARK	RATIONALE
E1.6	Consumption of potable water for residential population.	m <sup>3</sup> /occupant/ year	0: 150	Average regional value
			5: 40	Maximum value desired
E1.7	Consumption of potable water for non-residential building systems.	m <sup>3</sup> / m <sup>2</sup>	0: 15	Average regional value
			5: 5	Maximum value desired
E2.1	Solid waste and	%	0: 75	--

recycling collection points.	5: 95	Value desired
------------------------------	-------	---------------

## F- ENVIRONMENT

CRITERION	INDICATOR	UNIT OF MEASURE	BENCHMARK	RATIONALE
F1.3	Recharge of groundwater through permeable paving or landscaping.	%	0: 20	Minimum value desired
			5: 70	Maximum value desired
F2.3	Ambient air quality with respect to particulates <10 mu (PM10) over a one-year period.	days/year	0: 15	Maximum value desired
			5: 11	Minimum value desired
F2.10	Ambient daytime noise conditions.	%	0: 30	Maximum value desired
			5: 10	Minimum value desired
F2.11	Ambient night-time noise conditions.	%	0: 20	Maximum value desired
			5: 5	Minimum value desired
F3.1	Green zones & recreation areas availability.	m <sup>2</sup> /inh	0: 5	Minimum value desired
			5: 50	Maximum value desired
F3.2	Green zones & recreation areas accessibility.	m	0: 500	Minimum value desired
			5: 100	Maximum value desired
F3.3	Green zones & recreation areas density.	%	0: 20	Minimum value desired
			5: 50	Maximum value desired

## G- SOCIAL ASPECTS

CRITERION	INDICATOR	UNIT OF MEASURE	BENCHMARK	RATIONALE
G1.4	Ease of access to and use of public transport for physically disabled persons.	%	0: 60	--
			5: 100	Current value
G2.1	Performance of the public transport service.	%	0: 30	--
			5: 100	Current value
G2.4	Quality of pedestrian and bicycle network.	m / 100 inhabitants	0: 20	--
			5: 80	--

G4.2	Availability and proximity of key public human services.	%	0: 30	--
			5: 80	--
G6.3	Community involvement in urban planning activities.	Level	0: 0	Degrees of tokenism: Information / Consultation / Placation (in the Arnstein ladder).
			5:5	Degrees of citizen power: Partnership, delegated power and citizen power (in the Arnstein ladder), at every stages.

## SNTool Criteria Specifications

### A- BUILT URBAN SYSTEMS

CRITERION	INDICATOR	SPECIFICATIONS	
A1.2	Urban compactnes	Information source	Master Plan and Cadastre
		Assessment method	According its factsheet in the SN-Tool
		Standard	Urban planning
A1.4	Residential density.	Information source	Master Plan and Cadastre
		Assessment method	According its factsheet in the SN-Tool
		Standard	Urban planning
A1.7	Conservation of Land.	Information source	Master Plan and Cadastre
		Assessment method	According its factsheet in the SN-Tool
		Standard	Urban planning

### B- ECONOMY

CRITERION	INDICATOR	SPECIFICATIONS	
B1.1	Affordability of housing property..	Information source	Statistical data from Barcelona council
		Assessment method	According its factsheet in the SN-Tool

		Standard	Report ERD 2016 of Barcelona council Report 76 of Barcelona council
B1.2	Affordability of housing rental.	Information source	Statistical data from Barcelona council
		Assessment method	According its factsheet in the SN-Tool
		Standard	Report ERD 2016 of Barcelona council Report 76 of Barcelona council
B2.5	Economic contribution from tourism activity.	Information source	Statistical data from Barcelona council
		Assessment method	According its factsheet in the SN-Tool
		Standard	NA
B3.2	Public contribution in residential retrofitting investments.	Information source	Statistical data from Barcelona council
		Assessment method	According its factsheet in the SN-Tool
		Standard	NA
B3.3	Operating energy costs for public buildings.	Information source	Bills
		Assessment method	According its factsheet in the SN-Tool
		Standard	NA

## C- ENERGY

CRITERION	INDICATOR	SPECIFICATIONS	
C1.1	Total final thermal energy consumption for building operations.	Information source	Master plan (surveys) and bills
		Assessment method	According its factsheet in the SN-Tool
		Standard	NA
C1.4	Total final electrical energy consumption for building operations.	Information source	Master plan (surveys) and bills
		Assessment method	According its factsheet in the SN-Tool
		Standard	NA
C1.7	Total primary energy demand for building operations.	Information source	Master plan (surveys) and bills
		Assessment method	According its factsheet in the SN-Tool
		Standard	IDEA, coefficients of primary energy passage of different final energy sources consumed
C1.10	Primary energy for	Information source	Master plan

C1.12	heating - residential buildings.	Assessment method	According its factsheet in the SN-Tool
		Standard	NA
		Information source	Master plan
C1.20	Primary energy for cooling - residential buildings.	Assessment method	According its factsheet in the SN-Tool
		Standard	NA
		Information source	Statistical data from Barcelona council
C2.1	Energy consumption of public lighting.	Assessment method	According its factsheet in the SN-Tool
		Standard	Municipal regulations
		Information source	Master plan and bills
C2.4	Share of renewable energy on-site, on total final energy consumptions for buildings operation.	Assessment method	According its factsheet in the SN-Tool
		Standard	Municipal regulations
		Information source	Master plan and bills
C2.7	Share of renewable energy on-site, on total primary energy consumptions for buildings operation.	Assessment method	According its factsheet in the SN-Tool
		Standard	Municipal regulations
		Information source	Master plan and bills
C2.7	Share of electric energy generation from on-site renewable sources on final electric energy.	Assessment method	According its factsheet in the SN-Tool
		Standard	Municipal regulations
		Information source	Master plan and bills

## D- ATMOSPHERIC EMISSIONS

CRITERION	INDICATOR	SPECIFICATIONS	
D1.2	GHG emissions from energy used for all purposes in building operations.	Information source	Master plan and bills
		Assessment method	According its factsheet in the SN-Tool
		Standard	Factor GHG Emissions by Government of Catalonia

## E- NON-RENEWABLE RESOURCES

CRITERION	INDICATOR	SPECIFICATIONS
-----------	-----------	----------------

E1.6	Consumption of potable water for residential population.	Information source	Master plan (surveys)
		Assessment method	According its factsheet in the SN-Tool
		Standard	NA
E1.7	Consumption of potable water for non-residential building systems.	Information source	Master plan (surveys) and bills
		Assessment method	According its factsheet in the SN-Tool
		Standard	NA
E2.1	Solid waste and recycling collection points.	Information source	Master plan
		Assessment method	According its factsheet in the SN-Tool
		Standard	Municipal regulations

## E- NON-RENEWABLE RESOURCES

CRITERION	INDICATOR	SPECIFICATIONS	
F1.3	Recharge of groundwater through permeable paving or landscaping.	Information source	Google earths images
		Assessment method	According its factsheet in the SN-Tool
		Standard	NA
F2.3	Ambient air quality with respect to particulates <10 mu (PM10) over a one-year period.	Information source	Statistical data from Barcelona council
		Assessment method	According its factsheet in the SN-Tool
		Standard	Municipal regulations
F2.10	Ambient daytime noise conditions.	Information source	Statistical data from Barcelona council
		Assessment method	According its factsheet in the SN-Tool
		Standard	Municipal regulations
F2.11	Ambient night-time noise conditions.	Information source	Statistical data from Barcelona council
		Assessment method	According its factsheet in the SN-Tool
		Standard	Municipal regulations
F3.1	Green zones & recreation areas	Information source	Statistical data from Barcelona council and Google earth images
		Assessment method	According its factsheet in the SN-Tool

	availability.	Standard	Municipal regulations
F3.2	Green zones & recreation areas accessibility.	Information source	Statistical data from Barcelona council and Google earth images
		Assessment method	According its factsheet in the SN-Tool
		Standard	Municipal regulations
F3.3	Green zones & recreation areas density.	Information source	Statistical data from Barcelona council and Google earth images
		Assessment method	According its factsheet in the SN-Tool
		Standard	Municipal regulations

## G- SOCIAL ASPECTS

CRITERION	INDICATOR	SPECIFICATIONS	
G1.4	Ease of access to and use of public transport for physically disabled persons.	Information source	Statistical data from Barcelona council
		Assessment method	According its factsheet in the SN-Tool
		Standard	Mobility plan
G2.1	Performance of the public transport service.	Information source	Google maps
		Assessment method	According its factsheet in the SN-Tool
		Standard	NA
G2.4	Quality of pedestrian and bicycle network.	Information source	Statistical data from Barcelona council
		Assessment method	According its factsheet in the SN-Tool
		Standard	Mobility plan
G4.2	Availability and proximity of key public human services.	Information source	Google maps
		Assessment method	According its factsheet in the SN-Tool
		Standard	NA
G6.3	Community involvement in urban planning activities.	Information source	Master plan
		Assessment method	According its factsheet in the SN-Tool
		Standard	NA

# REGIONAL TOOL

## D.3.4.3 Regional Tool – SANT CUGAT

Version 1.1

Date: March 2019

2.1: To raise capacity for better management of energy in public buildings at transnational level

Work package: WP3 TESTING

Activity: 3.4 Evaluation of test results

Deliverable: 3.4.3 – Regional CESBA MED SNTs

**Responsible Partner:** Andrea Moro, iiSBE Italia R&D

# URBAN SCALE ASSESSMENT

## SNTool structure

A- BUILT URBAN SYSTEMS	
<b>A1</b>	<b>Urban Structure and Forme</b>
A1.7	Conservaiton of Land
<b>A2</b>	<b>Transportation infrastructure</b>
A2.1	Walking distance to public transport for area residents
A2.9	On-street and indoor parking spaces relative to local population
B- ECONOMY	
<b>B1</b>	<b>Economic Structure and Value</b>
B1.2	Affordability of housing rental
<b>B2</b>	<b>Economic Activity</b>
B2.2	Average annual per-capita income of residents
<b>B3</b>	<b>Cost and Investment</b>
B3.3	Operating energy costs for public buildings
C- ENERGY	
<b>C1</b>	<b>Non-renewable energy</b>
C1.1	Total final thermal energy consumption for building opeerations
C1.4	Total final electrical energy consumption for building oporations
C1.7	Total primary energy demand for building operations
C1.20	Energy consumption of public lighting
C1.21	Energy consumption of local public transport
<b>C2</b>	<b>Renewable and Decarbonised energy</b>
C2.1	Share of renewable energy on-site, relative to total final thermal energy consumption for building operations
C2.4	Share of renewable energy on-site, relative to total primary thermal energy consumption for building operations
C2.7	Share of renewable energy on-site, relative to total final electric energy consumption for building operations
C2.8	Aggregated electrical energy generation from renewable sources located on public properties
D- ATMOSPHERIC EMISSIONS	
<b>D1</b>	<b>Atmospheric emissions</b>
D1.2	Total GHG Emissions from primary energy used in building operations
D1.7	Total GHG Emissions from buildings, private and public mobility
E- NON - RENEWABLE RESOURCES	
<b>E1</b>	<b>Potable water, stormwater and greywater</b>
E1.1	Availability of a ublic municipal water supply
E1.3	Re-use of rainwater in residential buildings
E1.6	Consumption of potable water for residential population
E1.7	Consumption of potable water for public non-residential building systems
E1.8	Consumption of potable water for irrigation purposes

<b>E2</b>	<b>Solid and Liquid Wastes</b>
<b>E2.1</b>	<i>Solid waste and recycling collection points</i>
<b>E2.2</b>	<i>Separate collection and disposal of solid waste and recycling</i>
<b>E2.6</b>	<i>Public wastewater that is disposed of treated</i>

## F- ENVIRONMENT

<b>F1</b>	<b>Environment impacts</b>
<b>F1.3</b>	<i>Recharge of groundwater through permeable paving or landscaping</i>
<b>F1.10</b>	<i>Degree of atmospheric light pollution caused by exterior public lighting systems</i>
<b>F2</b>	<b>Outdoor environmental quality</b>
<b>F2.3</b>	<i>Ambient air quality with respect to particulates &lt;10 µm (PM10) over a one-year period</i>
<b>F3</b>	<b>Ecosystems and landscapes</b>
<b>F3.1</b>	<i>Green zones &amp; recreation areas availability</i>
<b>F3.2</b>	<i>Green zones &amp; recreation areas accessibility</i>
<b>F3.3</b>	<i>Green zones &amp; recreation areas density</i>
<b>F3.6</b>	<i>Tree coverage for shade and management of local ambient temperatures</i>
<b>F3.9</b>	<i>Presence or potential for wildlife corridors</i>

## G- SOCIAL ASPECTS

<b>G1</b>	<b>Safety and Accessibility</b>
<b>G1.2</b>	<i>Sidewalks and other pedestrian paths that are accessible for use by physically disabled persons</i>
<b>G1.4</b>	<i>Ease of access to and use of public transport for physically disabled persons</i>
<b>G2</b>	<b>Traffic and Mobility Services</b>
<b>G2.1</b>	<i>Performance of the public transport system</i>
<b>G2.3</b>	<i>Measures to limit traffic of cars and trucks passing through the local area</i>
<b>G2.4</b>	<i>Quality of pedestrian and bicycle network</i>
<b>G2.5</b>	<i>Availability of sheltered bicycle parking facilities</i>
<b>G3</b>	<b>Communication services</b>
<b>G3.1</b>	<i>Availability of a broadband communication network</i>
<b>G3.2</b>	<i>Access to a broadband communication network</i>
<b>G4</b>	<b>Public and private facilities and services</b>
<b>G4.2</b>	<i>Availability and proximity of key services</i>
<b>G4.3</b>	<i>Availability and proximity of a primary school</i>
<b>G4.4</b>	<i>Availability and proximity of a secondary school</i>
<b>G4.6</b>	<i>Availability and proximity of leisure facilities</i>
<b>G4.7</b>	<i>Access to indoor gymnastic facilities for winter use</i>
<b>G5</b>	<b>Local Food</b>
<b>G5.2</b>	<i>Residents' access to and use of urban agricultural plots</i>
<b>G6</b>	<b>Management and community involvement</b>
<b>G6.3</b>	<i>Community involvement in urban planning activities</i>
<b>G7</b>	<b>Society, Culture and Heritage</b>
<b>G7.2</b>	<i>Compatibility of public open space with local cultural values</i>

## SNTool criteria selection rationale

### A- BUILT URBAN SYSTEMS

CRITERION	REASON/MOTIVATION
<b>A1.7</b> <i>Conservation of Land</i>	<i>KPI (mandatory)</i>
<b>A2.1</b> <i>Walking distance to public transport for area residents</i>	<i>Easy to calculate and useful</i>
<b>A2.9</b> <i>On-street and indoor parking spaces</i>	<i>Relative easy to calculate</i>

*relative to local population*

## B- ECONOMY

CRITERION	REASON/MOTIVATION
<b>B1.2</b> <i>Affordability of housing rental</i>	<i>The economic capacity to live in an area is directly related to access to housing.</i>
<b>B2.2</b> <i>Average annual per-capita income of residents</i>	<i>To know the economic reality of an urban area, it is essential to know the income level of the residents. It is not easy to calculate accurately but the approximate value is significant</i>
<b>B3.3</b> <i>Operating energy costs for public buildings</i>	<i>KPI (mandatory)</i>

## C- ENERGY

CRITERION	REASON/MOTIVATION
<b>C1.1</b> <i>Total final thermal energy consumption for building operations</i>	<i>KPI (mandatory)</i>
<b>C1.4</b> <i>Total final electrical energy consumption for building operations</i>	<i>KPI (mandatory)</i>
<b>C1.7</b> <i>Total primary energy demand for building operations</i>	<i>KPI (mandatory)</i>
<b>C1.20</b> <i>Energy consumption of public lighting</i>	<i>Easy to calculate because the municipality is the owner of public lighting. In addition, it is a criterion where the municipality can act directly and help achieve its objectives.</i>
<b>C1.21</b> <i>Energy consumption of local public transport</i>	<i>Easy to calculate because the municipality is the owner of local public transport. In addition, it is a criterion where the municipality can act directly and help achieve its objectives.</i>
<b>C2.1</b> <i>Share of renewable energy on-site, relative to total final thermal energy consumption for building operations</i>	<i>KPI (mandatory)</i>
<b>C2.4</b> <i>Share of renewable energy on-site, relative to total primary thermal energy consumption for building operations</i>	<i>Useful criterion to introduce smart grids in an area and very useful to define how sustainable the area is.</i>
<b>C2.7</b> <i>Share of renewable energy on-site, relative to total final electric energy consumption for building operations</i>	<i>KPI (mandatory)</i>
<b>C2.8</b> <i>Aggregated electrical energy generation from renewable sources located on public properties</i>	<i>The generation of energy produced in public properties is easy to calculate to be municipal ownership. It is also a criterion where the administration can act directly and prove its involvement in search of sustainability.</i>

## D- ATMOSPHERIC EMISSIONS

CRITERION	REASON/MOTIVATION
<b>D1.2</b> <i>Total GHG Emissions from primary energy used in building operations</i>	<i>KPI (mandatory)</i>
<b>D1.7</b> <i>Total GHG Emissions from buildings, private and public mobility</i>	<i>Mobility is one of the main causes of the emission of GHG into the atmosphere and therefore it is necessary to know at least estimated values. Municipal policies can act</i>

directly on this criterion.

## E- NON - RENEWABLE RESOURCES

CRITERION	REASON/MOTIVATION
<b>E1.1 Availability of a public municipal water supply</b>	Easy to calculate because it is a public service. The importance of access to water is at the same level as access to energy and higher than access to telecommunications, so it is important to calculate it.
<b>E1.3 Re-use of rainwater in residential buildings</b>	Sant Cugat has very restrictive ordinances in this regard and has a fairly reliable knowledge of the reality of the municipality in the reutilization of rainwater in private plots.
<b>E1.6 Consumption of potable water for residential population</b>	KPI (mandatory)
<b>E1.7 Consumption of potable water for public non-residential building systems</b>	KPI (mandatory)
<b>E1.8 Consumption of potable water for irrigation purposes</b>	Sant Cugat has very restrictive ordinances in this regard and has a fairly reliable knowledge of the reality of the municipality in the use of water for irrigation purposes
<b>E2.1 Solid waste and recycling collection points</b>	Easy to calculate because the municipality is the owner of solid waste and recycling collection points. In addition, it is a criterion where the municipality can act directly and help achieve its objectives.
<b>E2.2 Separate collection and disposal of solid waste and recycling</b>	Easy to calculate because the municipality is the owner of the waste collection system.
<b>E2.6 Public wastewater that is disposed of treated</b>	Easy to calculate because the municipality is the owner of the sewer system. In addition, it is a criterion where the municipality can act directly and help achieve its objectives.

## F- ENVIRONMENT

CRITERION	REASON/MOTIVATION
<b>F1.3 Recharge of groundwater through permeable paving or landscaping</b>	KPI (mandatory)
<b>F1.10 Degree of atmospheric light pollution caused by exterior public lighting systems</b>	Easy to calculate because the municipality is the owner of public lighting. In addition, it is a criterion where the municipality can act directly and help achieve its objectives.
<b>F2.3 Ambient air quality with respect to particulates &lt;10 µm (PM10) over a one-year period</b>	KPI (mandatory)
<b>F3.1 Green zones &amp; recreation areas availability</b>	Easy to calculate because the municipality is the owner of green areas. In addition, it is a criterion where the municipality can act directly and help achieve its objectives.
<b>F3.2 Green zones &amp; recreation areas accessibility</b>	Easy to calculate because the municipality is the owner of green areas. In addition, it is a criterion where the municipality can act directly and help achieve its objectives.
<b>F3.3 Green zones &amp; recreation areas density</b>	Easy to calculate because the municipality is the owner of green areas. In addition, it is a criterion

**F3.6 Tree coverage for shade and management of local ambient temperatures**

where the municipality can act directly and help achieve its objectives.

Easy to calculate because the municipality is the owner of green areas. In addition, it is a criterion where the municipality can act directly and help achieve its objectives.

**F3.9 Presence or potencial for wildlife corridors**

Easy to calculate

## G- SOCIAL ASPECTS

CRITERION	REASON/MOTIVATION
<b>G1.2 Sidewalks and other pedestrian paths that are accessible for use by physically disabled persons</b>	It is a criterion where the municipality can act directly and help achieve its objectives. Safe modes of mobility for pedestrians are essential to become a sustainable city.
<b>G1.4 Ease of access to and use of public transport for physically disabled persons</b>	It is a criterion that mixes mobility and accessibility. Concepts that socially equate citizens and therefore is very useful. In addition, the municipality can act directly to achieve its objectives and it is easy to calculate.
<b>G2.1 Performance of the public transport system</b>	KPI (mandatory)
<b>G2.3 Measures to limit traffic of cars and trucks passing through the local area</b>	El municipio puede actuar directamente en este criterio y es fácil de calcular.
<b>G2.4 Quality of pedestrian and bicycle network</b>	KPI (mandatory)
<b>G2.5 Availability of sheltered bicycle parking facilities</b>	It is a criterion that mixes mobility and accessibility. Concepts that socially equate citizens and therefore is very useful. In addition, the municipality can act directly to achieve its objectives and it is easy to calculate.
<b>G3.1 Availability of a broadband communication network</b>	The availability and access to a broadband communication network are essential for the social equity of a territory.
<b>G3.2 Access to a broadband communication network</b>	The availability and access to a broadband communication network are essential for the social equity of a territory.
<b>G4.2 Availability and proximity of key services</b>	The ability to access basic services (schools, hospitals, businesses, ...) close to citizens is necessary to reduce the cost of mobility. In addition, it encourages more sustainable ways and promotes the social equity of a territory.
<b>G4.3 Availability and proximity of a primary school</b>	The ability to access basic services (schools, hospitals, businesses, ...) close to citizens is necessary to reduce the cost of mobility. In addition, it encourages more sustainable ways and promotes the social equity of a territory.
<b>G4.4 Availability and proximity of a secondary school</b>	The ability to access basic services (schools, hospitals, businesses, ...) close to citizens is necessary to reduce the cost of mobility. In addition, it encourages more sustainable ways and promotes the social equity of a territory.
<b>G4.6 Availability and proximity of leisure facilities</b>	The ability to access basic services (schools, hospitals, businesses, ...) close to citizens is necessary to reduce the cost of mobility. In addition, it encourages more sustainable ways and promotes the social equity of a territory.
<b>G4.7 Access to indoor gymnastic facilities for</b>	The ability to access basic services (schools,

winter use

hospitals, businesses, ...) close to citizens is necessary to reduce the cost of mobility. In addition, it encourages more sustainable ways and promotes the social equity of a territory. Easy to calculate

**G5.2 Residents' access to and use of urban agricultural plots**

**G6.3 Community involvement in urban planning activities**

The participation of citizens in urban design promotes the transparency of public administration and increases social awareness in relation to sustainability. Therefore, it is an interesting criterion to be known and improved by the public administration.

**G7.2 Compatibility of public open space with local cultural values**

The relevance to a territory is closely linked to the conservation of cultural values and public space is a place that can empower it.

## SNTool weights rationale

### ISSUES WEIGHTS

ISSUE	WEIGHTING FACTOR (1 to 3)	MOTIVATION
A- BUILT URBAN SYSTEMS	2	The morphology and urban design of a territory is the first of the layers that define a city. In it, all actions will be implemented and their viability will be allowed. Its importance is not minor but it is not decisive.
B- ECONOMY	2	The viability of any action depends on its financing and its economic viability. The economy is not the objective, but it is a basic tool for the achievement of the objective; the sustainability of the territory
C- ENERGY	3	The sustainable use of energy is the basis of a sustainable city. In addition, public policies can have a direct impact on their results.
D- ATMOSPHERIC EMISSIONS	2	The atmospheric emissions allow us to know how habitable a city is. They are important in terms of value but it is difficult to implement actions directly on this issue.
E- NON - RENEWABLE RESOURCES	1	Non-renewable resources are of great importance to guarantee sustainable cities, but no more than the other issues (energy, environment, ...)
F- ENVIRONMENT	3	The environment in a city is the definition of quality of life for its citizens. According to the European Commission; 80% of European citizens will live in cities in 2050 and according to the European Environment Agency; Long exposure to contaminated air was responsible for more than 400,000 premature deaths.
G- SOCIAL ASPECTS	1	Social aspects are important and allow equity among citizens. In fact, the urban agenda gives it great importance. Despite this, the project

ceased med is focused on the other aspects and therefore should be given a lower weight.

## SNTool benchmarks rationale

A- URBAN STRUCTURE AND FORM				
CRITERION	INDICATOR	UNIT OF MEASURE	BENCHMARK	RATIONALE
A1.7	Conservaiton of Land	%	0: 10	The CLC approved the default values.
			5: 20	The CLC approved the default values.
A2.1	Walking distance to public transport for area residents	%	0: 50	The CLC proposed to change the values of minimum and best practices because of the importance of promoting sustainable mobility in a sustainable city (40% default value).
			5: 90	The CLC proposed changing the values of minimum and best practices because of the importance of promoting sustainable mobility in a sustainable city (60% default value).
A2.9	On-street and indoor parking spaces relative to local population	%	0: 80	The CLC approved the default values.
			5: 25	The CLC approved the default values.
B- ECONOMY				
CRITERION	INDICATOR	UNIT OF MEASURE	BENCHMARK	RATIONALE
B1.2	Affordability of housing rental	%	0: 30	The CLC approved the default values.
			5: 20	The CLC approved the default values.
B2.2	Average annual per-capita income of residents	%	0: 60%	The CLC approved the default values.
			5: 90%	The CLC approved the default values.
B3.3	Operating energy costs for public buildings	€/m <sup>2</sup> /yr	0: 13.56	According to the models of average energy consumption for buildings published by the Catalan Institute of Energy and estimating a cost of 0.16 €/kWh
			5: 3.33	According to the models of energy consumption for buildings classified “A” and published by the Catalan

	Institute of Energy and estimating a cost of 0.16 €/kWh
--	---

C- ENERGY				
CRITERION	INDICATOR	UNIT OF MEASURE	BENCHMARK	RATIONALE
C1.1	Total final thermal energy consumption for building operations	kWh/m <sup>2</sup> /yr	0: 76.23	The CLC proposed to change the value of the minimum practice to 75 kWh / m2 / year because it was more realistic (default value of 50 kWh / m2 / year). The final value used is 76.23 kWh / m2 according to the classification of ICAEN (Catalan Institute of Energy) for a label "D" and because it is a value very close to the proposal of CLC.
			5: 33.8	The CLC proposed to increase the value of good practice. It is done directly by changing the value of the best practice (default value 0 kWh / m2 / year). The final value used is 33.8 kWh / m2 according to the classification of ICAEN (Catalan Institute of Energy) for a label "A"..
C1.4	Total final electrical energy consumption for building operations	kWh/m <sup>2</sup> /yr	0: 29.85	The CLC didn't propose to change the default value (25 kWh /m2/yr). Despite this, the reference values have followed the benchmark of criterion C1.1 (label "D" according to ICAEN)
			5: 10.88	The CLC didn't propose to change the default value (5 kWh /m2/yr). Despite this, the reference values have followed the benchmark of criterion C1.1 (label "A" according to ICAEN)
C1.7	Total primary energy demand for building operations	kWh/m <sup>2</sup> /yr	0: 152	The CLC didn't propose to change the default value (50 kWh /m2/yr). Despite this, the reference values have followed the benchmark of criterion C1.1 (label "D" according to ICAEN)
			5: 15	The CLC didn't propose to change the default value (15 kWh /m2/yr). Despite this, the reference values have followed the benchmark of criterion C1.1 (label "A"

				according to ICAEN)
C1.20	Energy consumption of public lighting	kWh/m <sup>2</sup>	0: 1.00	The CLC approved the default value. However, this value is not realistic, so the average value of the whole neighborhood becomes the value of the minimum practice (default value 50 kWh / m <sup>2</sup> )
			5: 0.67	The CLC approved the default value. However, this value is not realistic so two thirds of the average value of the whole city becomes the value of the best practice (default value 15 kWh/m <sup>2</sup> )
C1.21	Energy consumption of local public transport	pssg·km/ MJ	0: 500	The CLC approved the default value.
			5: 1,000	The CLC approved the default value.
C2.1	Share of renewable energy on-site, relative to total final thermal energy consumption for building operations	%	0: 25	The CLC approved the default value
			5: 90	The CLC approved the default value.
C2.4	Share of renewable energy on-site, relative to total primary thermal energy consumption for building operations	%	0: 20	The CLC approved to reduce the value because it was too restrictive (default value 25%).
			5: 80	The CLC approved the default value.
C2.7	Share of renewable energy on-site, relative to total final electric energy consumption for building operations	%	0: 15	The CLC approved to reduce the value because it was too restrictive (default value 35%).
			5: 75	The CLC approved the default value.
C2.8	Aggregated electrical energy generation from renewable sources located on public properties	%	0: 20	The CLC approved the default value.
			5: 80	The CLC approved the default value.

## D- ATMOSPHERIC EMISSIONS

CRITERION	INDICATOR	UNIT OF MEASURE	BENCHMARK	RATIONALE
D1.2	Total GHG Emissions from primary energy used in building operations	KgCO <sub>2</sub> eq /m <sup>2</sup> /yr	0: 30	The CLC approved the default value.
			5: 10	The CLC approved the default value.
D1.7	Total GHG Emissions from buildings, private and public mobility	TnCO <sub>2</sub> eq /1,000hab	0: 3,243	The CLC approved the default value. However, this value is not realistic, so the average value of the whole neighborhood becomes the value of the minimum practice (default value 80 TnCO <sub>2</sub> eq/100hab).
			5: 2,173	The CLC approved the default value. However, this value is

				not realistic so two thirds of the average value of the whole city becomes the value of the best practice (default 40 TnCO2eq/100hab)
--	--	--	--	---

## E- NON-RENEWABLE RESOURCES

CRITERION	INDICATOR	UNIT OF MEASURE	BENCHMARK	RATIONALE
E1.1	Availability of a public municipal water supply	%	0: 95 5: 99	The CLC approved to increase the value because it is mandatory (default value 90%). The CLC approved to increase the value because it is mandatory (default value 95%).
E1.3	Re-use of rainwater in residential buildings	%	0: 20 5: 40	The CLC approved to reduce the value because it was too restrictive (default value 10%). The CLC approved to reduce the value because it was too restrictive (default value 60%).
E1.6	Consumption of potable water for residential population	m <sup>3</sup> / occupant/ yr	0: 150 5: 60	The CLC approved to reduce the value because it was too restrictive (default value 10%). The CLC approved the default value.
E1.7	Consumption of potable water for public non-residential building systems	m <sup>3</sup> / m <sup>2</sup> /yr	0: 15 5: 5	The CLC approved the default value. The CLC approved the default value.
E1.8	Consumption of potable water for irrigation purposes	m <sup>3</sup> / 1.000 m <sup>2</sup> /yr	0: 5 5: 0	The CLC approved the default value. The CLC approved the default value.
E2.1	Solid waste and recycling collection points	%	0: 75 5: 95	The CLC approved the default value. The CLC approved the default value.
E2.2	Separate collection and disposal of solid waste and recycling	%	0: 40 5: 75	The CLC approved to reduce the value because it was too restrictive (default value 60%). The CLC approved to reduce the value because it was too restrictive (default value 60%).
E2.6	Public wastewater that is disposed of treated	%	0: 90 5: 100	The CLC approved the default value. The CLC approved the default value.

## F- ENVIRONMENT

CRITERION	INDICATOR	UNIT OF MEASURE	BENCHMARK	RATIONALE
-----------	-----------	-----------------	-----------	-----------

F1.3	Recharge of groundwater through permeable paving or landscaping	%	0: 20%	The CLC approved the default value.
			5: 70%	The CLC approved to reduce the value because it was too restrictive (default value 100%).
F1.10	Degree of atmospheric light pollution caused by exterior public lighting systems	mcd/m <sup>2</sup>	0: 3	The CLC approved to change units and value because they weren't realistic (default value 20 cd/m <sup>2</sup> ).
			5: 0.4	The CLC approved to change units and value because they weren't realistic (default value 20 cd/m <sup>2</sup> ).
F2.3	Ambient air quality with respect to particulates <10 µm (PM10) over a one-year period	day/yr	0: 15	The CLC approved the default value.
			5: 11	The CLC approved the default value.
F3.1	Green zones & recreation areas availability	m <sup>2</sup> /residents	0: 5	The CLC approved the default value.
			5: 50	The CLC approved the default value.
F3.2	Green zones & recreation areas accessibility	m	0: 500	The CLC considered that the minimum value could be more restrictive (default value 1,000 m)
			5: 150	The CLC considered that the minimum value could be more restrictive (default value 250 m)
F3.3	Green zones & recreation areas density	%	0: 20	The CLC approved the default value.
			5: 50	The CLC approved the default value.
F3.6	Tree coverage for shade and management of local ambient temperatures	%	0: 20	The CLC approved the default value.
			5: 50	The CLC approved the default value.
F3.9	Presence or potential for wildlife corridors	Level (score)	0: There are few opportunities within the built-up urban area to establish wildlife corridors.	The CLC approved the default value.
			5: There are opportunities within the built-up urban area to establish full wildlife corridors.	The CLC approved the default value.

G- SOCIAL ASPECTS				
CRITERION	INDICATOR	UNIT OF MEASURE	BENCHMARK	RATIONALE
G1.2	Sidewalks and other pedestrian paths that are accessible for use by physically disabled persons	%	0: 50	The CLC approved the default value.
			5: 90	The CLC approved the default value.
G1.4	Ease of access to and use of public transport for physically disabled persons	%	0: 60	The CLC approved the default value.
			5: 100	The CLC approved the default value.
G2.1	Performance of the public transport system	%	0: 30	The CLC approved the default value.

			5: 89	The CLC approved the default value.
G6.3	Community involvement in urban planning activities	Level (score)	0: value	The CLC approved the default value.
			5: value	The CLC approved the default value.
G7.2	Compatibility of public open space with local cultural values	Level (score)	0: value	The CLC approved the default value.
			5: value	The CLC approved the default value.

## SNTool Criteria Specifications

A- BUILT URBAN SYSTEMS				
CRITERION	INDICATOR	SPECIFICATIONS		
A1.7	Conservation of Land	Information source	Mesured data form Municipal Urban Planning	
		Assessment method	<u>CESBA assessment method:</u>  1. Determine the area of the neighborhood. 2. Determine the undeveloped area of land that is considered by authorities to be of ecological and agricultural value. 3. Calculate the ratio between the undeveloped area and the area of the neighborhood.	
		Standard		
A2.1	Walking distance to public transport for area residents	Information source	Mesured ddta from the local public transport map	
		Assessment method	<u>CESBA assessment method:</u>  1. Identify the location of public transport stops within the local area. 2. Identify major residential buildings and centers of other housing. 3. Calculate the walking distance for a sample of typical routes	
		Standard		
A2.9	On-street and indoor parking spaces relative to local population	Information source	Statics data from the Municipality (private parking data and public outdoor parking data)	
		Assessment method	<u>CESBA assessment method:</u>  1. Determine the number of on-street	

parking spaces.  
 2. Determine the number of indoor parking spaces.  
 3. Determine the ratio of total parking spaces to the total residential and working population in the local area

Comments from Sant Cugat:

1. Working population is calculated using a ratio (14pax/m<sup>2</sup>) in bussiness center located in the area.

Standard

B- ECONOMY		
CRITERION	INDICATOR	SPECIFICATIONS
B1.2	Affordability of housing rental	<p>Information source</p> <p>Statics data from webiste (average rental housing)                      Studies (citizen incomes) from IDESCAT (Institute of statiistics of Catalonia) <a href="http://www.idescat.cat">www.idescat.cat</a>  <u>CESBA assessment method:</u></p> <p>The percent of typical annual household income of the lowest income quintile in the area relative to the market rents local housing unit with two bedrooms that is considered to be modest in area and quality.</p> <p><u>Comments from Sant Cugat:</u></p>
		<p>Assessment method</p> <p>The average rental price of flats in the area is calculated using the most widely used rental websites in Spain. No information is available for the calculation of the income of the lowest quintel nor of the average income of the neighborhood. The known data is the average of the whole city level (no quintels).                      The ratio has therefore been calculated with the average income of the whole city.</p>
		<p>Standard</p> <p>Insert text here</p>
B2.2	Average annual per-capita income of residents	<p>Information source</p> <p>Studies (citizen incomes) from IDESCAT (Institute of statiistics of Catalonia) <a href="http://www.idescat.cat">www.idescat.cat</a></p>

Assessment method	<u>CESBA assessment method:</u>
	Calculate the average per-capita income of residents in the local area relative to that of the urban region as a whole.
Assessment method	<u>Comments from Sant Cugat:</u>
	Because there is not available income data in the neighborhood, the ratio has been calculated using the average income of the city relative to the region (Vallès Occidental).

Standard

B3.3	Operating energy costs for public buildings	Information source	Statics data from the Municipality
		Assessment method	<u>CESBA assessment method:</u>  To characterize the indicator's value: 1. For each building in the urban area, calculate the annual operating energy (thermal and electric) cost (euro/year). 2. Sum the operating energy costs of each building in the urban area up to an aggregated annual operating energy cost value (euro/year). 3. Sum the indoor useful area of each building in the area up to an aggregated indoor useful area value (m2). 4. Calculate the indicator as: aggregated annual operating energy cost / aggregated indoor useful area (euro/m2/year).
		Standard

**C2.7** Share of renewable energy on-site, relative to total final electric energy consumption for building operations

Information source

Estimated energy data of the PAES of Sant Cugat.

Measured renewable installation data of the Municipality.

Average production rate of APERCA (Association of Renewable Energy Professionals of Catalonia)

CESBA assessment method:

Assessment method

To characterize the indicator's value there are two options 2018-12-16: use of estimated data

OR Use of metered data

Note

For the evaluation of the actual performance of the urban area it is preferable to use metered data. If metered data aren't available, estimated data shall be used.

Estimated data are used for evaluating retrofit scenarios in planning and decision-making processes.

In reporting the indicator's value, data sources must always be indicated.

Exported energy is the one delivered by technical systems through the system boundary (urban area) and used outside the system

boundary. Exported energy is a benefit beyond the system boundary and it has not to be included in the calculation.

Use of estimated data:

1. In the calculation of the final electric energy consumption, the following energy uses must be considered: heating, cooling, ventilation, auxiliaries, domestic hot water and lighting.

2. For each building in the local area, calculate the annual final electric energy consumption in kilowatt hours (kWh/year).

3. Sum the annual final electric energy consumption of each building up to an aggregated total annual final electric energy consumption (kWh/year).

4. For each building in the local area, calculate the annual final electric energy consumption

from on-site renewable energy sources

Assessment method

in kilowatt hours (kWh/year).  
 5. Sum the annual final electric energy consumption from on-site renewable sources of each building up to an aggregated total annual final electric energy consumption from on-site renewable sources (kWh/year).  
 6. Calculate the indicator as: annual total final electric energy consumption from on-site renewable sources / annual total final electric energy consumption.

*Note*

*Calculations are based on EN 13790 using the quasi-steady state monthly method.*

*Use of metered data:*

- 1. In the evaluation of the final electric energy consumption, the following energy uses must be considered: heating, cooling, ventilation, auxiliaries, domestic hot water and lighting water.*
- 2. For each building in the local area, collect the metered annual final electric energy consumption) in kilowatt hours (kWh/year).*
- 3. Sum the annual final electric energy consumption of each building up to an aggregated total annual final electric energy consumption (kWh/year).*
- 4. For each building in the local area, collect the monitored annual final electric energy consumption from on-site renewable sources in kilowatt hours (kWh).*
- 5. Sum the annual final electric energy consumption from on-site renewable sources of each building up to an aggregated total annual final electric energy consumption from on-site renewable sources (kWh/year).*
- 6. Calculate the indicator as: annual total electric energy generation from on-site renewable energy sources / annual total final electric energy consumption.*

*Comments from Sant Cugat:*

*Data used are taken from the PAES (SEAP, Sustainability and Energy*

Action Plan) of Sant Cugat.

Data from the PAES is a city level. It has been estimated to neighborhood level. The latest update of the PAES is from 2015

The renewable energy production is calculated using the data collected from the Municipality about renewable public and private installations and using an average production rate; 333 kWh/m<sup>2</sup>·yr

## D- ATMOSPHERIC EMISSIONS

CRITERION	INDICATOR	SPECIFICATIONS	
D1.2	Total GHG Emissions from primary energy used in building operations	Information source	<p>Estimated energy data of the PAES of Sant Cugat.</p> <p>Measured renewable installation data of the Municipality.</p> <p>Average production rate of APERCA (Association of Renewable Energy Professionals of Catalonia)</p>

CESBA assessment method:

*The scope of the indicator comprises the use stage of the building and includes the emissions correlated to the following energy uses: heating, cooling, ventilation, domestic hot water, lighting, auxiliaries.*

*To characterize the indicator's value:*

*1. For each building in the area calculate the emissions of CO2 eq. with the following formula:*

$$E = \left[ \sum (Q_{fuel,i} \times LHV_i \times k_{em,i}) + (Q_{el} \times k_{em,el}) + (Q_{dh} \times k_{em,dh}) \right]$$

*Q<sub>fuel,i</sub> = annual quantity of i-th fuel (m<sup>3</sup> or Kg)*

*Q<sub>el</sub> = annual quantity of electric energy from the grid (kWh)*

*Q<sub>dh</sub> = annual quantity of energy from district heating/cooling (kWh)*

*LHV<sub>i</sub> = lower heating value of the i-th fuel (kWh/m<sup>3</sup> or kWh/Kg)*

*K<sub>em,i</sub> = CO2 eq. emission factor of the i-th fuel (Kg CO2/kWh)*

*K<sub>em,i</sub> = CO2 eq. emission factor of the electric energy from the grid (Kg CO2/kWh)*

*K<sub>em,i</sub> = CO2 eq. emission factor of energy from district heating/cooling (Kg CO2/kWh)*

Assessment  
method

*Calculate the aggregated annual total CO2 equivalent emissions from all buildings / total useful internal floor area of all buildings.*

*Note*

*In the calculation, the annual quantity of fuels, electric energy from the grid, energy from district heating/cooling can be metered or estimated. The source of data must always be clearly declared.*

*Refer to separate PDF file: D3.4.2 CESBA MED KPIs - Urban Scale.*

Comments from Sant Cugat:

*Data used are taken from the PAES (SEAP, Sustainability and Energy Action Plan) of Sant Cugat.*

*Data from the PAES is a city level. It has been estimated to neighborhood level. The latest update of the PAES is*

Place caps on consumption for various uses, and/or impose user charges to provide incentives for conservation.</li> </ol>
		Standard	
E1.3	Re-use of rainwater in residential buildings	Information source	Estimated using measured data from Meteorological Service of Catalonia. <a href="http://www.meteo.cat/">http://www.meteo.cat/</a>
		Assessment method	Installations of re-use of rainwater in residential building data from Municipality <u>CESBA assessment method:</u> Calculate the percentage of public wastewater that is disposed or treated <u>Comments from Sant Cugat:</u> There are only three facilities in the area with an accumulated capacity of 39.3 m3. The percentage of reuse is practically zero.
		Standard	Insert text here
E1.6	Consumption of potable water for residential population	Information source	Mesured water supply data from Municipality
		Assessment method	<u>CESBA assessment method:</u> The water consumption is calculated based on metered data when available or on the estimated use of water consuming appliances and sanitary fittings in the buildings. The scope of the criterion includes the use of both

potable water and non-potable water and applies to processes for:

- drinking water;
- water for sanitation;
- domestic hot water;
- water for cleaning.

1) For each non-residential public building, collect the monitored annual water consumptions for building operation. The consumption data must be estimated taking the average over 3 years period (m3).

2) Sum the annual water consumption of each building up to an aggregated annual total water consumption (m3/year).

3) Estimate the area of public buildings considered for the calculation.

4) Calculate the indicator's value as: aggregated annual total water consumption / area of public buildings.

Note:

The public buildings that must be considered in the calculation are offices and schools (all levels, excluding universities).

The consumption of water for dishwasher should not be considered for offices.

## F- ENVIRONMENT

CRITERION	INDICATOR	SPECIFICATIONS
		Information source Estimated permeable paving data from Municipality
		<u>CESBA assessment method:</u> o characterize the indicator's value: 1. Calculate the size (Sa) of the urban area (m2). 2. Calculate the size of the surfaces with a different paving or occupied by constructions in the urban area (i.e. green areas, surfaces paved with asphalt, surfaces occupied by buildings, etc.). Include all the surfaces in the urban area so that: Sa = total surface of the urban area Sa,i = surface i-th in the area (m2) 3. Calculate the real permeability of soil considering the permeability coefficient of each surface. Sa,i = i-th surface in the area (m2) $\alpha_i$ = permeability coefficient of the i-th surface  Reference permeability coefficients: Grass = 1 Gravel = 0,9 Sand = 0,9 Plastic gratings filled with land/grass = 0,8 Concrete gratings leaning on the grass = 0,6 Concrete gratings leaning on gravel = 0,6 Interlocking elements leaning on sand = 0,3 Interlocking elements leaning on gravel = 0,3 Interlocking elements leaning on concrete pavement = 0 Continuous pavements leaning on concrete = 0 Asphalt = 0
F1.3	Recharge of groundwater through permeable paving or landscaping	Assessment method
		Standard

F1.10	Degree of atmospheric light pollution caused by exterior public lighting systems	Information source Atmospheric light pollution data from "Light Pollution Map" published by Government of Catalonia <a href="http://mediambient.gencat.cat/es/05_a_mbits_dactuacio/atmosfera/contaminacio_luminica/index.html">http://mediambient.gencat.cat/es/05_a_mbits_dactuacio/atmosfera/contaminacio_luminica/index.html</a>
-------	--	---

F2.3	Ambient air quality with respect to particulates <10 mu (PM10) over a one-year period	Assessment method	<p><u>CESBA assessment method:</u></p> <p>Night sky brightness (NSB) is quantified as the brightness of skyglow. The measured NSB is a combination of the scattered light from artificial lighting sources and natural emissions. Technically, NSB refers to the flux of “anything” coming from the night sky per unit surface per unit solid angle. Typical units of NSB include magnitude per arcsecond square (mag/arcsec<sup>2</sup>) and candela per meter square (cd/m<sup>2</sup>).</p> <p><u>Comments from Sant Cugat:</u></p> <p>The atmospheric light pollution is known through the “Light Pollution Map” published by Government of Catalonia. The data is measured in (mag/arcsec<sup>2</sup>) and is converted to cd/m<sup>2</sup> using the Sky Brightness Nomogram <a href="http://www.darkskiesawareness.org/nomogram.php">www.darkskiesawareness.org/nomogram.php</a></p>
		Standard	<p>the Sky Brightness Nomogram <a href="http://www.darkskiesawareness.org/nomogram.php">www.darkskiesawareness.org/nomogram.php</a></p>

G- SOCIAL ASPECTS		
CRITERION	INDICATOR	SPECIFICATIONS
G1.2	Sidewalks and other pedestrian paths that are accessible for use by physically disabled persons	Information source Mesured data from Municipality
		Assessment method <u>CESBA assessment method</u> 1. Identify key pedestrian paths or other public routes that may be frequently used by persons with physical disabilities. 2. Assess the accessibility of exterior parking and pedestrian routes, considering all major disability types. 3. Establish the percent of public pedestrian routes that may be considered accessible. <u>Comments from Sant Cugat:</u> It has been taken in account the acces to the public buildings as a public route.
		Standard
G1.4	Ease of access to and use of public transport for physically disabled persons	Information source Mesurated data from Municipality
		Assessment method <u>CESBA assessment method</u> Evaluate the ease of access to and use of public transport for physically disabled persons.
		Standard
G2.1	Performance of the public transport system	Information source Mesured data from Municipality
		Assessment method <u>CESBA assessment method</u> To characterize the indicator's value: 1- Calculate the percentage of the inhabitants in the area that are within 400 meters walking distance of at least one public transportation service stop (bus, tram, metro).

Standard

		Information source	Estimated data from Municipality
			<u>CESBA assessment method</u>
<b>G2.3</b>	Measures to limit traffic of cars and trucks passing through the local area	Assessment method	<ol style="list-style-type: none"> <li>1. Identify sections of the urban road network that may be used by through traffic;</li> <li>2. Identify the designed traffic capacity of each section;</li> <li>3. Assess the proportion of current vehicle traffic volumes generated by local and through traffic at non-peak and peak traffic periods;</li> <li>4. Assess secondary impacts of high traffic volumes on bicyclists, pedestrians and the function of retail, commercial or residential buildings facing the roads.</li> <li>5. Summarize the situation by estimating the impact of local vehicle traffic on the peak road capacity.</li> </ol>

Standard

		Information source	Mesured data from Municipal Urban Planning and from satellit map
			<u>CESBA assessment method</u>
			To characterize the indicator's value:
			1. Estimation of the number of inhabitants in the area
			2. Calculation of the walkway meters of dedicated pedestrian paths in the area (A)
			3. Calculation of the meters of bicycle paths in the area (B)
			4. Calculate the indicator's value as: $(A+B) / 100$ inhabitants
<b>G2.4</b>	Quality of pedestrian and bycycle network	Assessment method	<p>Note</p> <ul style="list-style-type: none"> <li><input type="checkbox"/> Pedestrian paths not part of a "shared space" must be safe to be considered (physical separated from traffic roads)</li> <li><input type="checkbox"/> Bicycle paths not part of a "shared space" must be safe to be considered (physically separated from traffic roads)</li> <li><input type="checkbox"/> A "shared space" is an urban design approach that minimizes the segregation between modes of road user (car, pedestrian, bicycle, etc.) in order to make safe</li> </ul>

space for every type of mobility; the shared space is to be used by anyone. This can be done through minimizing traffic signs, road surface markings, enforcing speed reduction down to 15-20 kmh. Shared space is here understood in a broad definition including the different philosophies and implementation methods in force in Europe. For the calculation it is necessary to evaluate the linear meters of all the streets included in a shared space.

Standard

<b>G2.5</b>	<i>Availability of sheltered bicycle parking facilities</i>	Information source	Mesured data from Municipality
		Assessment method	<u>CESBA assessment method</u> Calculate the number of sheltered bicycle parking spaces relative to the total population of the local area.

Standard

<b>G3.1</b>	<i>Availability of a broadband communication network</i>	Information source	Mesured data from Municipality
		Assessment method	<u>CESBA assessment method</u> Calculate the percentage of the local area in which a broadband communication network is available.

Standard

<b>G3.2</b>	<i>Access to a broadband communication network</i>	Information source	Mesured data from Municipality
		Assessment method	<u>CESBA assessment method</u> Identify all the dwellings that have access to high-speed Internet connection, estimate the occupancy, and divide the value for the overall population of the area.

Standard

<b>G4.2</b>	<i>Availability and proximity of key services</i>	Information source	Mesured data from Municipality and satellit map
		Assessment method	<u>CESBA assessment method</u> Convenient locations of key human services for access by local residents is a major factor in reducing the use of private vehicles and in ensuring that residents can obtain access to the services they need. Key human services include health clinics, police stations, social welfare offices etc.

Key services are:

1. Education (schools, kindergartens, education centers, etc.)
2. Health center (hospitals, medical ward, medical center, etc.)
3. Law enforcement areas (police station, etc.)
4. Sport facilities
5. Food shops
6. Bank
7. Post office
8. Pharmacy
9. Shopping center

It is possible to consider only one key service from each of the nine categories. Private services can be considered.

#### Standard

<b>G4.3</b>	<i>Availability and proximity of a primary school</i>	Information source	Mesured data from Municipality and satellit map
		Assessment method	<u>CESBA assessment method</u> Calculate the percentage of resident population with access to a primary school within a distance of 500 m.

#### Standard

<b>G4.4</b>	<i>Availability and proximity of a secondary school</i>	Information source	Mesured data from Municipality and satellit map
		Assessment method	<u>CESBA assessment method</u> Calculate the percentage of resident population with access to a secondary school within a distance of 1 km.

#### Standard

<b>G4.6</b>	<i>Availability and proximity of leisure facilities</i>	Information source	Mesured data from Municipality and satellit map
		Assessment method	<u>CESBA assessment method</u>  For the indicator of performance calculation proceeds as follows: 1. Identify the facilities for leisure in the area, distinguishing in sports and cultural structures. 2. Calculate the actual distance on foot between these nodes and access the buildings. 3. Calculate the percentage of the population that is less than 1km from at least one service for each of the two categories.

#### Standard

G4.7	Access to indoor gymnastic facilities for winter use	Information source	Mesured data from Municipality and satellit map
		Assessment method	<u>CESBA assessment method</u> Calculate the percentage of resident population of the local area who have access within a distance of 1 km. to an indoor gymnastic facility for winter use.
		Standard	
G5.2	Residents' access to and use of urban agricultural plots	Information source	Mesured data from Municipality and satellit map
		Assessment method	<u>CESBA assessment method</u> Percent of resident population with access to public urban agriculture plots within a distance of 1 km.
		Standard	
G6.3	Community involvement in urban planning activities	Information source	Estimated data from Municipality
		Assessment method	<u>CESBA assessment method</u> The assessment is about: - how much citizens (inhabitants and users) are integrated to the planning process? - how much is their opinion is taken into consideration? - how much do they drive the planning agenda? - Are people "planned for" by external experts or are they part of the decision making process? - Is there a dichotomy between the planners holding power (and supposedly knowledge) and citizens? The Arnstein ladder, built by Sherry Arnstein (SA), is the reference for community planning assessment. Her work remains the basis of current research on citizen involvement in planning. The proposed assessment process is therefore based on the SA ladder and further development from Hélène Chelzen and Anne Jégou in 20152 which tends to take into consideration recent evolution in practices. <u>Comments from Sant Cugat:</u> Degrees of citizen power: Partnership, delegated power and citizen power (in the Arnstein ladder) partially in after delivery phase.
		Standard	

		Information source	Estimated data from Municipality
G7.2	Compatibility of public open space with local cultural values		<u>CESBA assessment method</u>
		Assessment method	Evaluate the compatibility of public open spaces in the local area with traditional cultural values in the region.
		Standard	

# REGIONAL TOOL

## D.3.4.3 Regional Tool – University of Malta

Version 1.1

Date: March 2019

2.1: To raise capacity for better management of energy in public buildings at transnational level

Work package: WP3 TESTING

Activity: 3.4 Evaluation of test results

Deliverable: 3.4.3 – Regional CESBA MED SNTs

**Responsible Partner:** Andrea Moro, iiSBE Italia R&D

# URBAN SCALE ASSESSMENT

## SNTool structure

A- BUILT URBAN SYSTEMS	
<b>A1</b>	<b>Urban Structure and Form</b>
A1.1	Concentration of land parcels.
A1.2	Urban compactness
A1.4	Residential density
A1.5	Urban street canyons (H/W aspect ratio)
A1.6	Homogeneity of Land
A1.7	Conservation of Land
<b>A2</b>	<b>Transportation Infrastructure</b>
A2.2	Walking distance to public transport for area workers and students.
A2.3	Extent and connectivity of pedestrian streets and walkways.
A2.9	On-street and indoor parking spaces relative to local population.
B- ECONOMY	
<b>B1</b>	<b>Economic Structure and Value</b>
B1.4	Impact of land values on adjacent areas.
<b>B2</b>	<b>Economic Activity</b>
B2.3	Employment rate
<b>B3</b>	<b>Cost and Investment</b>
B3.3	Operating energy costs for public building
C- ENERGY	
<b>C1</b>	<b>Non- Renewable Energy</b>
C1.1	Total final thermal energy consumption for building operations.
C1.3	Total final thermal energy consumption for non residential building operations.
C1.4	Total final electrical energy consumption for building operations.
C1.6	Total final electrical energy consumption for non residential building operations.
C1.7	Total primary energy demand for building operations
<b>C2</b>	<b>Renewable and Decarbonised Energy</b>
C2.1	Share of renewable energy on-site, on total final energy consumptions for buildings operation.
C2.4	Share of renewable energy on-site, on total primary energy consumptions for buildings operation.
C2.7	Share of electric energy generation from on-site renewable sources on final electric energy./ Share of renewable energy on-site, on final electric energy consumptions.
D- ATMOSPHERIC EMISSIONS	
<b>D1</b>	<b>Atmospheric Emissions</b>
D1.2	GHG emissions from energy used for all purposes in building operations.

E- NON - RENEWABLE RESOURCES	
<b>E1</b>	<b>Potable water, stormwater and greywater</b>
E1.1	Availability of a public municipal water supply.
E1.4	Re-use of rainwater in non-residential building.
E1.5	Re-use of stormwater.
E1.7	Consumption of potable water for non-residential building systems.
<b>E2</b>	<b>Solid and Liquid Wastes</b>
E2.1	Solid waste and recycling collection points.
E2.2	Separate collection and disposal of solid waste and recycling.
E2.3	Solid waste from construction and demolition projects retained in the area for re-use or recycling.
F- ENVIRONMENT	
<b>F1</b>	<b>Environmental Impacts</b>
F1.1	Impact of construction activities on natural features
F1.2	Impact of construction activities or landscaping on soil stability or erosion.
F1.3	Recharge of groundwater through permeable paving or landscaping.
F1.4	Changes in biodiversity.
F1.7	Impact of local building user population on peak load capacity of public transport system.
F1.8	Impact of private vehicles used by the local population on peak load capacity of the local road system.
<b>F2</b>	<b>Outdoor Environmental Quality</b>
F2.10	Ambient daytime noise conditions.
F2.11	Ambient night-time noise conditions.
<b>F3</b>	<b>Ecosystems and Landscapes</b>
F3.1	Green zones & recreation areas availability
F3.2	Green zones & recreation areas accessibility
F3.3	Green zones & recreation areas density
F3.6	Tree coverage for shade and management of local ambient temperatures.
F3.7	Green roofs.
F3.10	Ecological diversity in the area
G- SOCIAL ASPECTS	
<b>G1</b>	<b>Safety and Accessibility</b>
G1.1	Buildings that are accessible for use by physically disabled persons.
G1.2	Sidewalks and other pedestrian paths that are accessible for use by physically disabled persons.
G1.3	Barrier-free accessibility in local outdoor public areas.
G1.4	Ease of access to and use of public transport for physically disabled persons.
G1.5	Objective/subjective safety measures.
<b>G2</b>	<b>Traffic and Mobility Services</b>
G2.1	Performance of the public transport service..
G2.4	Quality of pedestrian and bicycle network.
G2.5	Availability of sheltered bicycle parking facilities.
<b>G3</b>	<b>Communication Services</b>
G3.1	Availability of a broadband communication network
G3.2	Access to a broadband communication network.
<b>G4</b>	<b>Public and private facilities and services</b>

G4.1	Availability and proximity of key food and retail services
G4.2	Availability and proximity of key public human services
G6	<b>Management and community involvement</b>
G6.1	Involvement of residents in community affairs.
G6.3	Community involvement in urban planning activities
G7	<b>Society, Culture and Heritage</b>
G7.1	Compatibility of urban design with local cultural values.
G7.2	Compatibility of public open space with local cultural values.
G7.4	Use of traditional local materials and techniques
G7.5	Maintenance of UNESCO or other protected landscapes
G8	<b>Perceptual</b>
G8.2	Panoramic and scenic routes or view points.
G8.3	Perceived safety of public areas for pedestrians.
G8.4	Impact of commercial signage on the visual environment.
G8.5	Impact of overhead electric distribution system on the visual environment.
G8.6	Perceptual quality of area development.
G8.7	Aesthetic quality of new facility exteriors.

## SNTool criteria selection rationale

A- BUILT URBAN SYSTEMS	
CRITERION	REASON/MOTIVATION
A1.1 Concentration of land parcels	Area in Malta is very limited with regards to the total population. This indicator is therefore vital for the conservation of space.
A1.2 Urban compactness	It is important to maximise the use of land used for buildings due to the reason mentioned in A1.1.
A1.4 Residential density	It is important to measure the density of buildings in the local area due to the reason mentioned in A1.1.
A1.5 Urban street canyons (H/W aspect ratio)	The local Development Control Design Policy 2015 (DC 15) gives various examples of height to road width ratios. The averaged out number is: 2.31.
A1.6 Homogeneity of Land	Important to assess the voids of the urban fabric.
A1.7 Conservation of Land	Undeveloped land considered to be of value for ecological or agricultural purposes. Locally these areas are named 'Outside Development Zone' (ODZ) where development is restricted.
A2.2 Walking distance to public transport for area workers and students.	This indicator was chosen since public transport needs to be given a higher priority in order to discourage citizens in using their own private car. Locally, traffic is a number one issue.
A2.3 Extent and connectivity of pedestrian streets and walkways.	Since traffic is a number one issue, more walkways and pedestrianized streets would discourage the citizens in using their own private vehicle.
A2.9 On-street and indoor parking spaces relative to	Same reason mentioned in A2.2 and A2.3. Since

*local population.*

*traffic is a number one issue, more parking spaces encourage people to use their own private car. Making it more difficult for people to find a parking space means a better chance that they will use public transport.*

## B- ECONOMY

CRITERION	REASON/MOTIVATION
<b>B1.4 Impact of land values on adjacent areas</b>	<i>A certain level of external and internal capital investment in the local area is needed to ensure that the property market remains healthy and that business enterprises can function.</i>
<b>B2.3 Employment Rate</b>	<i>The employment rate of a country shows the economic situation. This indicator is therefore very important.</i>
<b>B3.3 Operating energy costs for public building</b>	<i>N.A</i>

## C- ENERGY

CRITERION	REASON/MOTIVATION
<b>C1.1 Total final thermal energy consumption for building operations.</b>	<i>It is important to know how much of the energy usage is being driven towards thermal energy consumption (both heating and cooling).</i>
<b>C1.3 Total final thermal energy consumption for non residential building operations.</b>	
<b>C1.4 Total final electrical energy consumption for building operations.</b>	<i>It is important to know how much electrical energy is being used in the neighbourhood per m<sup>2</sup> of useful area.</i>
<b>C1.6 Total final electrical energy consumption for non residential building operations.</b>	
<b>C1.7 Total primary energy demand for building operations</b>	<i>This indicator was chosen specifically as it relates to primary energy, thus including losses in generation and transmission. This is useful as it is a measure in which energy demand for building operations may be reduced.</i>
<b>C2.1 Share of renewable energy on-site, on total final energy consumptions for buildings operation.</b>	<i>In Malta thermal energy is not treated separately from electrical energy when generated from renewable energy sources.</i>
<b>C2.4 Share of renewable energy on-site, on total primary energy consumptions for buildings operation.</b>	<i>This is an important indicator to see whether the amount of energy used for building operation is coming from on-site renewables or from the grid.</i>
<b>C2.7 Share of electric energy generation from on-site renewable sources on final electric energy./ Share of renewable energy on-site, on final electric energy consumptions.</b>	<i>Similar to above, this is an important indicator to find out whether enough energy is being generated on-site.</i>

## D- ATMOSPHERIC EMISSIONS

CRITERION	REASON/MOTIVATION
<b>D1.2 GHG emissions from energy used for all purposes in building operations.</b>	<i>The main aim of this indicator is to estimate greenhouse gas (GHG) emissions resulting from</i>

building operations in the local area. Since in Malta, energy is generated from one source (Enemalta Power Station), then the GHG emissions from energy is equal to that of the power station. This result is proportioned according to the energy used (calculated by Enemalta).

E- NON - RENEWABLE RESOURCES	
CRITERION	REASON/MOTIVATION
<b>E1.1 Availability of a public municipal water supply.</b>	The availability of a public water supply system, with water purity assured by appropriate purification systems and management, is essential to ensure public health in urban areas. This service is locally provided by Water Services Corporation (WSC).
<b>E1.4 Re-use of rainwater in non-residential building.</b>	The rainwater collected in our test site is usually not sufficient to cater for all the irrigation demand and thus the reservoirs have to be refilled by water from private operators. This indicator is crucial to highlight the importance of re-using water when possible.
<b>E1.5 Re-use of stormwater.</b>	Important to reduce the potable water consumption.
<b>E1.7 Consumption of potable water for non-residential building systems.</b>	Important to reduce the potable water consumption.
<b>E2.1 Solid waste and recycling collection points.</b>	Waste collection is currently being revamped in Malta. The organic bag has just recently been introduced and waste is collected everyday with a shedule for: organic waste, recycled waste and inorganic waste.
<b>E2.2 Separate collection and disposal of solid waste and recycling.</b>	Waste collection is currently being revamped in Malta. The organic bag has just recently been introduced and waste is collected everyday with a shedule for: organic waste, recycled waste and inorganic waste.
<b>E2.3 Solid waste from construction and demolition projects retained in the area for re-use or recycling.</b>	Construction and demolition waste is a problem in Malta especially since currently we have a construction boom. This waste is currently being disposed in quarries.

F- ENVIRONMENT	
CRITERION	REASON/MOTIVATION
<b>F1.1 Impact of construction activities on natural features</b>	Since locally we have a construction boom this indicator is very important.
<b>F1.2 Impact of construction activities or landscaping on soil stability or erosion.</b>	Since locally we have a construction boom this indicator is very important.
<b>F1.3 Recharge of groundwater through permeable paving or landscaping.</b>	Important to improve permeability locally which therefore recharges the aquifers and reduces effluents.

<b>F1.4 Changes in biodiversity.</b>	To promote the diversity of plants.
<b>F1.7 Impact of local building user population on peak load capacity of public transport system.</b>	Important to evaluate the peak load capacity of the local public transport system. This evaluates the efficiency of the public transport system.
<b>F1.8 Impact of private vehicles used by the local population on peak load capacity of the local road system</b>	Important to determine the impact of private vehicles used by the local population on the peak load capacity of the local road system.
<b>F2.10 Ambient daytime noise conditions.</b>	Important to minimise daytime noise.
<b>F2.11 Ambient night-time noise conditions.</b>	Important to minimise nighttime noise.
<b>F3.1 Green zones &amp; recreation areas availability</b>	Important to measure the existing green zones and recreation areas as added value for quality of life of the citizens.
<b>F3.2 Green zones &amp; recreation areas accessibility</b>	Important to reduce the negative effects of urbanization.
<b>F3.3 Green zones &amp; recreation areas density</b>	Important to measure the existing green zones and recreation areas as added value for quality of life of the citizens.
<b>F3.6 Tree coverage for shade and management of local ambient temperatures.</b>	Important to reduce the ambient temperatures.
<b>F3.7 Green roofs.</b>	Important to reduce the ambient temperatures and retaining rainwater which therefore reduced flooding issues.
<b>F3.10 Ecological diversity in the area</b>	Important to preserve and enhance the local ecological diversity.

<b>G- SOCIAL ASPECTS</b>	
<b>CRITERION</b>	<b>REASON/MOTIVATION</b>
<b>G1.1 Buildings that are accessible for use by physically disabled persons.</b>	Important to assess the ability of local residents, workers or visitors with physical disabilities to be able to have physical access to key buildings.
<b>G1.2 Sidewalks and other pedestrian paths that are accessible for use by physically disabled persons.</b>	Important to assess the ability of local residents, workers or visitors with physical disabilities to be able to make use of public outdoor facilities.
<b>G1.3 Barrier-free accessibility in local outdoor public areas.</b>	Important to evaluate the accessibility of various urban resources using spatial data analysis.
<b>G1.4 Ease of access to and use of public transport for physically disabled persons.</b>	Important to facilitate the access to public transport by physically disabled persons.
<b>G1.5 Objective/subjective safety measures.</b>	Important to provide objective and subjective safety to area users.
<b>G2.1 Performance of the public transport service.</b>	Important to determine the performance of the public transportation system. Locally the government is providing incentives so that the citizens favour public transport.
<b>G2.4 Quality of pedestrian and bicycle network.</b>	Important to promote cycling and walking instead of the use of private car which generates traffic.
<b>G2.5 Availability of sheltered bicycle parking facilities.</b>	Important to promote cycling and walking instead of the use of private car which generates traffic.
<b>G3.1 Availability of a broadband communication network</b>	Important to evaluate occupant access to broadband communication.
<b>G3.2 Access to a broadband communication network.</b>	Important to ensure access to high-speed internet connections.
<b>G4.1 Availability and proximity of key food and retail</b>	Important to assess the ability of the citizens to

services

#### G4.2 Availability and proximity of key public human services

##### G6.1 Involvement of residents in community affairs.

##### G6.3 Community involvement in urban planning activities

##### G7.1 Compatibility of urban design with local cultural values.

##### G7.2 Compatibility of public open space with local cultural values.

##### G7.4 Use of traditional local materials and techniques

##### G7.5 Maintenance of UNESCO or other protected landscapes

##### G8.2 Panoramic and scenic routes or view points.

##### G8.3 Perceived safety of public areas for pedestrians.

##### G8.4 Impact of commercial signage on the visual environment.

##### G8.5 Impact of overhead electric distribution system on the visual environment.

##### G8.6 Perceptual quality of area development.

##### G8.7 Aesthetic quality of new facility exteriors.

walk to key food and retail services instead of using the private car.

Important to assess the ability of the citizens to key public human services instead of using the private car.

Important to promote involvement of citizens in community affairs.

Important to raise the level of community involvement in planning.

Important to evaluate the compatibility or urban design with the local cultural values.

Important to evaluate the compatibility of public open space with local cultural values.

Important to promote the use of local materials and techniques.

Important to preserve and maintain landscape heritage.

Important to evaluate interesting natural or urban scenery.

Important to improve safety of public places and pedestrian routes.

Important to avoid visual environment obstruction through the integration of commercial signage.

Important to avoid visual environment obstruction caused by an overhead electric distribution system.

Important to improve the perception of residents about quality of the urban area.

Important to improve quality of the exteriors of new buildings.

## SNTool benchmarks rationale

A- URBAN STRUCTURE AND FORM				
CRITERION	INDICATOR	UNIT OF MEASURE	BENCHMARK	RATIONALE
<b>A1.1 Concentration of land parcels.</b>	Number of lots in the local area related to the total surface area.	<i>Building lots/ha</i>	0: 4.2 5: 0	N.A
<b>A1.2 Urban compactness</b>	<i>Relation between the usable space of the buildings (volume) and the urban space (area).</i>	Ratio	0: 1.0 5: 3.0	N.A
<b>A1.4 Residential density</b>	<i>The residential density of the local area, as measured in resident persons per hectare.</i>	<i>Persons/ hectare</i>	0: 50 5: 200	N.A
<b>A1.5 Urban street canyons (H/W aspect ratio)</b>	The ratio of typical building heights acompared to the distance between building facades on the other side of the street.	Ratio	0: 2.0 5:4.0	N.A
<b>A1.6 Homogeneity of Land</b>	Percentage of the perimeter of the area directly adjacent to urbanized areas.	%	0:10% 5:36%	N.A
<b>A1.7 Conservation of Land</b>	Area of undeveloped land with ecological or agricultural value / area of the neighborhood	%	0:10% 5:28%	N.A
<b>A2.2 Walking distance to public transport for area workers and students.</b>	Percent of workers and students who can reach a public trasnport stop within a 500m. distance.	m	0:550 5:150	N.A
<b>A2.3 Extent and</b>	Aggregate area of	%	0:10%	N.A

<b>connectivity of pedestrian streets and walkways.</b>	pedestrian streets and walkways in the local area relative to the total land area.		5:15%	
<b>A2.9 On-street and indoor parking spaces relative to local population.</b>	The ratio of on-street and indoor car parking spaces relative to the total resident and working population of the local area.	%	0:80% 5:25%	N.A

## B- ECONOMY

CRITERION	INDICATOR	UNIT OF MEASURE	BENCHMARK	RATIONALE
<b>B1.4 Impact of land values on adjacent areas.</b>	Average annual change in land values of properties immediately adjacent to the urban area, over a 5-year period.	%	0:3% 5:0%	N.A
<b>B2.3 Employment rate</b>	Percent of working age adults in the local area who are employed or actively looking for work.	%	0: 3% 5: 0%	N.A
<b>B3.3 Operating energy costs for public building</b>	Aggregated annual operating energy cost per aggregated internal useful floor area	Euro/m2/year	0:100 5:0	N.A

## C- ENERGY

CRITERION	INDICATOR	UNIT OF MEASURE	BENCHMARK	RATIONALE
<b>C1.1 Total final thermal energy consumption for building operations.</b>	Aggregated annual total final thermal energy consumption per aggregated internal useful floor area	kWh/m2/yr	0: >50 5:0	N.A
<b>C1.3 Total final thermal energy consumption for non residential building operations.</b>	Urban thermal energy consumption of non-residential buildings (kWh/m2).	kWh/m2/yr	0: 50 5: 10	N.A
<b>C1.4 Total final electrical energy consumption for building operations.</b>	Aggregated annual total final electric energy consumption per aggregated internal useful floor area	kWh/m2/yr	0:25 5:5.0	N.A
<b>C1.6 Total final electrical energy consumption for non residential building operations.</b>	Urban electrical energy consumption of non-residential buildings (kWh/m2).	kWh/m2	0:25 5:10	N.A
<b>C1.7 Total primary</b>	Aggregated annual total	kWh/m2/year	0:50	N.A

<b>energy demand for building operations</b>	primary energy consumption per aggregated internal useful floor area		5:15	
<b>C2.1 Share of renewable energy on-site, on total final energy consumptions for buildings operation.</b>	Annual total thermal energy consumption from on-site renewable energy sources / annual total final thermal energy consumption	%	0:25% 5:90%	N.A
<b>C2.4 Share of renewable energy on-site, on total primary energy consumptions for buildings operation.</b>	Aggregated total annual primary energy consumption from on-site renewable energy sources / aggregated total annual primary energy consumption	%	0:30% 5:80%	N.A
<b>C2.7 Share of electric energy generation from on-site renewable sources on final electric energy./ Share of renewable energy on-site, on final electric energy consumptions.</b>	Annual total electric energy consumption from on-site renewable energy sources / annual total final electric energy consumption	%	0:35% 5:75%	N.A

D- ATMOSPHERIC EMISSIONS				
CRITERION	INDICATOR	UNIT OF MEASURE	BENCHMARK	RATIONALE
<b>D1.2 GHG emissions from energy used for all purposes in building operations.</b>	CO2 equivalent emissions per useful internal floor area per year	kgCO2/m2	0:80 5:30	N.A

E- NON-RENEWABLE RESOURCES				
CRITERION	INDICATOR	UNIT OF MEASURE	BENCHMARK	RATIONALE
<b>E1.1 Availability of a public municipal water supply.</b>	Availability of a public municipal water supply to all permanent buildings in the area.	%	0:90% 5:100%	N.A
<b>E1.4 Re-use of rainwater in non-residential building.</b>	Share of rainwater collected from roofs of non residential buildings.	%	0: 20% 5: 70%	N.A
<b>E1.5 Re-use of stormwater.</b>	Percent of annual stormwater that is re-used.	%	0:20% 5:50%	N.A
<b>E1.7 Consumption of potable water for</b>	Annual water consumption per	m3/occupant/year	0:15 5:5.0	N.A

<b>non-residential building systems.</b>	occupant			
<b>E2.1 Solid waste &amp; recycling collection points.</b>	Proximity of the resident population to the solid waste and recycling collection point.	%	0:75% 5:95%	N.A
<b>E2.2 Separate collection and disposal of solid waste and recycling.</b>	Separated collection and disposal of solid waste and recycling.	%	0:10% 5:80%	N.A
<b>E2.3 Solid waste from construction and demolition projects retained in the area for re-use or recycling.</b>	Volume of materials that will be re-used or recycled from the local area on the total solid waste from construction and demolition of building projects	%	0:10% 5:80%	N.A

F- ENVIRONMENT				
CRITERION	INDICATOR	UNIT OF MEASURE	BENCHMARK	RATIONALE
<b>F1.1 Impact of construction activities on natural features</b>	Preservation of land during and pre construction phase.	Score	0: Building and infrastructure construction projects have had some negative impacts on pre-existing land forms and vegetation over the previous 3-year period. 5: Building and infrastructure construction projects have had no perceptible negative impacts on pre-existing land forms and vegetation over the previous 3-year period.	N.A
<b>F1.2 Impact of construction activities or landscaping on soil stability or erosion.</b>	Impact degree of construction activities on soil stability.	Score	0: Building and infrastructure construction projects have had some negative impacts on landscaping and soil stability over the previous 3-year period. 5: Building and infrastructure construction projects have had no perceptible negative impacts on landscaping and soil stability over the previous 3-year period.	N.A
<b>F1.3 Recharge of groundwater through permeable paving or landscaping.</b>	Area of permeable surfaces on total neighborhood area	%	0:20% 5:100%	N.A
<b>F1.4 Changes in biodiversity.</b>	Diversity of plant structures.	Score	0: Changes in plant or animal biodiversity in the local area over the last 3 year period appear to be somewhat impaired. 5: Changes in plant or animal biodiversity in the local area over the last 3 year period are positive.	N.A
<b>F1.7 Impact of local</b>	Diversity of plant	Local Factor	0:0.5	N.A

<b>building user population on peak load capacity of public transport system.</b>	structures.		5:1.0	
<b>F1.8 Impact of private vehicles used by the local population on peak load capacity of the local road system</b>	Impact degree of private vehicles on the population.	Score	0: It is estimated that the use of private vehicles by the local population reaches the peak load capacity of the local road system, with some negative impacts on traffic speeds, air quality, pedestrian and bicycling environments, and the function of adjacent buildings. <i>N.A</i> 5: It is estimated that the use of private vehicles by the local population is considerably less than the peak load capacity of the local road system, and there are no significant impacts on traffic speeds, air quality, pedestrian and bicycling environments, and the function of adjacent buildings.	<i>N.A</i>
<b>F2.10 Ambient daytime noise conditions.</b>	Percentage of building area over noise limit.	%	0:30% 5:0%	<i>N.A</i>
<b>F2.11 Ambient night-time noise conditions.</b>	Proportion of population exposed to non recommended levels of night noise.	%	0:20% 5:5%	<i>N.A</i>
<b>F3.1 Green zones &amp; recreation areas availability</b>	Availability of green zones & recreation areas	m2/resident population	0:3.0 5:10.0	<i>N.A</i>
<b>F3.2 Green zones &amp; recreation areas accessibility</b>	Accessibility of green spaces within the area.	Average distance,m	0:1000 5:250	<i>N.A</i>
<b>F3.3 Green zones &amp; recreation areas density</b>	Density of green spaces within the area.	%	0:20% 5:50%	<i>N.A</i>
<b>F3.6 Tree coverage for shade and management of local ambient temperatures.</b>	Reduction of ambient temperatures through evapo-transpiration.	% of area	0:20% 5:80%	<i>N.A</i>
<b>F3.7 Green roofs.</b>	Aggregate area of building roofs covered with vegetated material.	%	0:10% 5:60%	<i>N.A</i>
<b>F3.10 Ecological diversity in the area</b>	Diversity of surface and aquatic biota in the local area.	Score	0: The level of ecological diversity in the local area is similar to the larger urban area. 5: The level of ecological diversity in the local area is considerably higher than the larger urban area.	<i>N.A</i>

G- SOCIAL ASPECTS				
CRITERION	INDICATOR	UNIT OF MEASURE	BENCHMARK	RATIONALE
<b>G1.1 Buildings that are accessible for use by physically disabled persons.</b>	Percent of key public, commercial and residential buildings that are accessible for use by physically disabled persons.	%	0:50% 5:90%	N.A
<b>G1.2 Sidewalks and other pedestrian paths that are accessible for use by physically disabled persons.</b>	Percent of sidewalks and other pedestrian ways that are accessible for use by physically disabled persons.	%	0: 50% 5: 100%	N.A
<b>G1.3 Barrier-free accessibility in local outdoor public areas.</b>	Adequacy of barrier-free accessible public outdoor areas compared to the total public area.	%	0:50% 5:100%	N.A
<b>G1.4 Ease of access to and use of public transport for physically disabled persons.</b>	Features of public transport to facilitate access physically disabled persons, such as kneeling buses and wide entries..	%	0:60% 5:100%	N.A
<b>G1.5 Objective/subjective safety measures.</b>	Adequacy of signage and traffic calming measures.	Score	0: A panel of residents and workers in the local area has determined that the objective and subjective measures taken to protect the safety of pedestrians, cyclists and drivers are consistent with measures taken in the urban region. 5: A panel of residents and workers in the local area has determined that the objective and subjective measures taken to protect the safety of pedestrians, cyclists and drivers are much more effective than measures taken in the urban region.	N.A
<b>G2.1 Performance of the public transport service.</b>	Percentage of inhabitants that are within 400 meters walking distance of at least one public transportation service stop	%	0:30% 5:100%	N.A
<b>G2.4 Quality of pedestrian and bicycle network.</b>	Total walkway meters of dedicated pedestrian paths and meters of bicycle path per 100 inhabitants	m/100 inhabitants	0:5 5:40	N.A
<b>G2.5 Availability of</b>	Sheltered bicycle	%	0:20%	N.A

<b>sheltered bicycle parking facilities.</b>	parking spaces.		5:60%	
<b>G3.1 Availability of a broadband communication network</b>	Local area with available broadband communication network	%	0:80% 5:95%	N.A
<b>G3.2 Access to a broadband communication network.</b>	Percentage of population with access to broadband communication.	%	0:80% 5:95%	N.A
<b>G4.1 Availability and proximity of key food and retail services</b>	Percent of residential buildings located within a distance of 300 m. of basic food and household goods.	%	0:30% 5:80%	N.A
<b>G4.2 Availability and proximity of key public human services</b>	Percentage of inhabitants that are within 800 meters walking distance of at least 3 key services.	%	0:50% 5:100%	N.A
<b>G6.1 Involvement of residents in community affairs.</b>	Percentage of resident population above 16 years having an involvement in community affairs.	%	0:5% 5:20%	N.A
<b>G6.3 Community involvement in urban planning activities</b>	Level of involvement of users in urban planning	Score	0: Degrees of tokenism: Information / Consultation / Placation (in the Arnstein ladder). 5: Degrees of citizen power: Partnership, delegated power and citizen power (in the Arnstein ladder), at every stages.	N.A
<b>G7.1 Compatibility of urban design with local cultural values.</b>	Compatibility with local area traditional values of street layouts and the character of urban spaces.	Score	0: Street layouts and the character of urban spaces in the local area are not compatible with traditional cultural values in the region. 5: Street layouts and the character of urban spaces in the local area are fully compatible with traditional cultural values in the region.	N.A
<b>G7.2 Compatibility of public open space with local cultural values.</b>	Compatibility with local area traditional values of local public open spaces, including major uses, dimensions and adjacent uses.	Score	0: The character of public open space in the local area are not compatible with traditional cultural values in the region. 5: The character of public open spaces in the local area are fully compatible with traditional cultural values in the region.	N.A
<b>G7.4 Use of traditional local materials and techniques</b>	Compatibility with local area traditional values of construction techniques and types of materials.	Score	0: The panel formed to assess the compatibility of construction techniques and types of materials now being used with traditional values in the local area considers that the level of compatibility is low. 5: The panel formed to assess the compatibility of construction	N.A

			techniques and types of materials now being used with traditional values in the local area considers that the level of compatibility is high.	
<b>G7.5 Maintenance of UNESCO or other protected landscapes</b>	Preventive maintenance and protection of UNESCO or other protected landscapes	Score	0: Preventive maintenance and protection measures for UNESCO or other protected landscapes appear to be barely adequate. 5: Preventive maintenance and protection measures for UNESCO or other protected landscapes appear to be excellent.	N.A
<b>G8.2 Panoramic and scenic routes or view points.</b>	Presence and quality of scenic routes and places.	Score	There are a few scenic routes and places in the locality that provide views of interesting natural or urban vistas.	N.A
<b>G8.3 Perceived safety of public areas for pedestrians.</b>	Perceived safety of public places and pedestrian routes, as determined by a sample of pedestrians.	Score	0: The perceived safety of public places and pedestrian routes, as determined by a sample of residents, is adequate, except at night. 5: The perceived safety of public places and pedestrian routes, as determined by a sample of residents, is very high during daytime and nighttime conditions.	N.A
<b>G8.4 Impact of commercial signage on the visual environment.</b>	Visual impact of exterior commercial signage.	Score	0: The aggregate visual impact of exterior commercial signage, based on the degree of integration with building exteriors, diversity in signage dimensions and illumination; as determined by a sample of the local area population, is at the same level as the region. 5: The aggregate visual impact of exterior commercial signage, based on the degree of integration with building exteriors, diversity in signage dimensions and illumination; as determined by a sample of the local area population, is very positive.	N.A
<b>G8.5 Impact of overhead electric distribution system on the visual environment.</b>	Visual impact of above-grade electrical distribution systems.	Score	0: The aggregate visual impact of above-grade electrical distribution systems, based on degree of visual clutter; as determined by a sample of the local area population, somewhat negative. 5: The aggregate visual impact of above-grade electrical distribution systems, based on degree of visual clutter; as determined by a sample of the local area population, is positive.	N.A
<b>G8.6 Perceptual</b>	Perceived quality of the	Score	0: The perceived quality of area	N.A

<b>quality of area development.</b>	urban area and natural development.		urban and natural development, as determined by a sample of residents, is negative. 5: The perceived quality of area urban and natural development, as determined by a sample of residents, is positive.	
<b>G8.7 Aesthetic quality of new facility exteriors.</b>	Perceived quality of the exteriors of new buildings.	Score	0: The perceived quality of the exteriors of new buildings in the local area, as determined by a sample of residents, is mediocre. 5: The perceived quality of the exteriors of new buildings in the local area, as determined by a sample of residents, is excellent.	N.A

## SNTool Criteria Specifications

A- BUILT URBAN SYSTEMS			
CRITERION	INDICATOR	SPECIFICATIONS	
<b>A1.1 Concentration of land parcels.</b>	<i>Number of lots in the local area related to the total surface area.</i>	<i>Information source</i>	University Of Malta
		<i>Assessment method</i>	This indicator requires two types of data: The number of building lots and the total land area of the urban area. A ratio is then attained between these two values.
		<i>Standard</i>	N.A
<b>A1.2 Urban compactness</b>	<i>Relation between the usable space of the buildings (volume) and the urban space (area).</i>	<i>Information source</i>	University Of Malta
		<i>Assessment method</i>	This indicator requires two types of data: The gross volume of buildings and the total developed area. A ratio is then attained between these two values.
		<i>Standard</i>	N.A
<b>A1.4 Residential density</b>	<i>The residential density of the local area, as measured in resident persons per hectare.</i>	<i>Information source</i>	University Of Malta
		<i>Assessment method</i>	N.A
		<i>Standard</i>	N.A

<b>A1.5 Urban street canyons (H/W aspect ratio)</b>	The ratio of typical building heights compared to the distance between building facades on the other side of the street.	<i>Information source</i>	University Of Malta
		<i>Assessment method</i>	The main aim of this indicator is to assess the negative psychological effects that result from urban streets with a very small ratio of width to height. This requires a ratio between a typical building height and the distance between building facades.
		<i>Standard</i>	Design Policy Guidance Document (DC15)
<b>A1.6 Homogeneity of Land</b>	Percentage of the perimeter of the area directly adjacent to urbanized areas.	<i>Information source</i>	University Of Malta
		<i>Assessment method</i>	The main aim of this indicator is to find the percentage ratio between the length of the urban fabric parameter adjacent to urbanised areas and the overall perimeter of the area taken.
		<i>Standard</i>	N.A
<b>A1.7 Conservation of Land</b>	Area of undeveloped land with ecological or agricultural value / area of the neighborhood	<i>Information source</i>	University Of Malta
		<i>Assessment method</i>	<ol style="list-style-type: none"> <li>1. Determine the surface area of the neighbourhood (including area developed for buildings).</li> <li>2. Determine the aggregated surface area of land that is considered by authorities to be of ecological and agricultural value.</li> <li>3. Calculate the ratio between the aggregate surface area of land that is considered by authorities to be of ecological/agricultural value and the surface area of the neighbourhood.</li> </ol>
		<i>Standard</i>	N.A
<b>A2.2 Walking distance to public transport for area workers and students.</b>	Percent of workers and students who can reach a public transport stop within a 500m. distance.	<i>Information source</i>	University Of Malta
		<i>Assessment method</i>	1. Identifying of the public transport stops within the test area.

			<p>2. Identifying of major education, industrial or office buildings.</p> <p>3. Calculation of the walking distance for a sample of typical routes.</p>
		<i>Standard</i>	<i>Transport National Strategy 2020</i>
<b>A2.3 Extent and connectivity of pedestrian streets and walkways.</b>	Aggregate area of pedestrian streets and walkways in the local area relative to the total land area.	<i>Information source</i>	University Of Malta
		<i>Assessment method</i>	The main aim is to find out the percentage area of pedestrian walkways, including also those dedicated to bicycles (if any).
		<i>Standard</i>	N.A
<b>A2.9 On-street and indoor parking spaces relative to local population.</b>	The ratio of on-street and indoor car parking spaces relative to the total resident and working population of the local area.	<i>Information source</i>	University Of Malta
		<i>Assessment method</i>	<p>1. Determine the number of on-street parking spaces.</p> <p>2. Determine the number of indoor parking spaces.</p> <p>3. Determine the ratio of total parking spaces to the total residential and working population in the local area.</p>
		<i>Standard</i>	

B- ECONOMY			
CRITERION	INDICATOR	SPECIFICATIONS	
<b>B1.4 Impact of land values on adjacent areas.</b>	Average annual change in land values of properties immediately adjacent to the urban area, over a 5-year period.	<i>Information source</i>	University Of Malta
		<i>Assessment method</i>	The main aim of this indicator is to assess the increase of the cost of the land with regards to the

			increase of cost of living. This is assessed over a 5 year period. The data for this indicator can vary due to the fact that property increase could be subjective and could vary from one property to the other.
		Standard	N.A
<b>B2.3 Employment rate</b>		Information source	<a href="https://tradingeconomics.com/malta/employment-rate">https://tradingeconomics.com/malta/employment-rate</a>
	Percent of working age adults in the local area who are employed or actively looking for work.	Assessment method	The main aim of this indicator is to calculate the number of people in the labour force compared to the number of working age people and express result as a percentage. This indicator is needed to assess the labour market status, the economy development and the citizens' quality of life.
		Standard	N.A
<b>B3.3 Operating energy costs for public building</b>	Aggregated annual operating energy cost per aggregated internal useful floor area	Information source	
		Assessment method	
		Standard	

C- ENERGY			
CRITERION	INDICATOR	SPECIFICATIONS	
<b>C1.1 Total final thermal energy consumption for building operations.</b>	Aggregated annual total final thermal energy consumption per aggregated internal useful floor area	Information source	VRF systems monitor.
		Assessment method	<ul style="list-style-type: none"> <li>Annual Total final thermal energy consumption, in kWh/year, for each building in the area which has to be estimated by taking an average over a 3-year period</li> <li>Calculation of the</li> </ul>

			<p>aggregated annual total final thermal energy consumption for all buildings.</p> <ul style="list-style-type: none"> <li>Dividing the aggregated thermal energy consumption by the total useful area of all buildings.</li> </ul>
		Standard	Data Collection for 3 years.
<b>C1.3 Total final thermal energy consumption for non residential building operations.</b>	Urban thermal energy consumption of non-residential buildings (kWh/m <sup>2</sup> ).	Information source	Same as C1.1 as all buildings on campus are non-residential.
		Assessment method	
		Standard	
<b>C1.4 Total final electrical energy consumption for building operations.</b>	Aggregated annual total final electric energy consumption per aggregated internal useful floor area	Information source	Monitored data from electricity meters.
		Assessment method	<ol style="list-style-type: none"> <li>1. Data collection of the monitored annual total final electric energy consumption for building operations in kWh, for each building in the local area. This was taken for a 3 year period.</li> <li>2. Calculation of the aggregated annual total final electric energy consumption for all buildings.</li> <li>3. The aggregated annual total final energy was divided by the area to obtain the result.</li> </ol>
		Standard	Data collection.
<b>C1.6 Total final electrical energy consumption for non residential building operations.</b>	Urban electrical energy consumption of non-residential buildings (kWh/m <sup>2</sup> ).	Information source	
		Assessment method	
		Standard	
<b>C1.7 Total primary energy demand for building operations</b>	Aggregated annual total primary energy consumption per aggregated internal useful floor area	Information source	Monitored data.
		Assessment method	<ol style="list-style-type: none"> <li>1. The annual final energy consumption was calculated in kWh/year, and</li> </ol>

			<p>summed</p> <ol style="list-style-type: none"> <li>The aggregated annual final energy consumption was converted into primary energy consumption</li> <li>The aggregated annual total primary energy consumption was divided by the aggregated internal useful area (kWh/m<sup>2</sup>/year).</li> </ol>
		Standard	Data Collection.
<b>C2.1 Share of renewable energy on-site, on total final energy consumptions for buildings operation.</b>	Annual total thermal energy consumption from on-site renewable energy sources / annual total final thermal energy consumption	Information source	This indicator was not done as we do not treat thermal energy as separate from electrical energy when generated from renewable energy sources.
		Assessment method	
		Standard	
<b>C2.4 Share of renewable energy on-site, on total primary energy consumptions for buildings operation.</b>	Aggregated total annual primary energy consumption from on-site renewable energy sources / aggregated total annual primary energy consumption	Information source	Metered Data from grid meter and renewables meter.
		Assessment method	The annual total primary energy consumption without renewables, was divided by the aggregated annual total primary energy consumption.
		Standard	N/A
<b>C2.7 Share of electric energy generation from on-site renewable sources on final electric energy./ Share of renewable energy on-site, on final electric energy consumptions.</b>	Annual total electric energy consumption from on-site renewable energy sources / annual total final electric energy consumption	Information source	Metred Data.
		Assessment method	<ol style="list-style-type: none"> <li>Collection of data of monitored annual total final electric energy consumption for building operations, in kWh, for each building, taking the average over a 3-year period.</li> <li>The annual total final electric energy consumption for building operations from on-site renewable energy sources is calculated.</li> <li>The aggregated annual total final electrical energy consumption from on-site</li> </ol>

			renewable sources was divided by the aggregated annual total final electrical energy consumption.
		Standard	N/A

D- ATMOSPHERIC EMISSIONS			
CRITERION	INDICATOR	SPECIFICATIONS	
<b>D1.2 GHG emissions from energy used for all purposes in building operations.</b>	CO2 equivalent emissions per useful internal floor area per year	Information source	Enemalta
		Assessment method	In Malta, energy is generated from one source (Enemalta Power Station), then the GHG emissions from energy is equal to that of the power station. This result is proportioned according to the energy used (calculated by Enemalta).
		Standard	N/A

E- NON-RENEWABLE RESOURCES			
CRITERION	INDICATOR	SPECIFICATIONS	
<b>E1.1 Availability of a public municipal water supply.</b>	Availability of a public municipal water supply to all permanent buildings in the area.	Information source	University Of Malta
		Assessment method	<ol style="list-style-type: none"> <li>1. Identify sections of the local area that are served by a municipal public water supply.</li> <li>2. Identify residential and non-residential end users.</li> <li>3. Ensure that each end user is equipped with one or more water meters.</li> <li>4. Collect data on usage and assess whether water is</li> </ol>

		consumed in an efficient way.  5. Place caps on consumption for various uses, and/or impose user charges to provide incentives for conservation.	
		Standard	N.A
<b>E1.4 Re-use of rainwater in non-residential building.</b>	Share of rainwater collected from roofs of non residential buildings.	Information source	University Of Malta & Team 2 Architects
		Assessment method	The main aim of this indicator is to assess the collection of rainwater from roofs in non-residential buildings. Rainwater collection can be used as greywater to use for toilet or irrigation purposes. This reduces the demand for potable water.
		Standard	N.A
<b>E1.5 Re-use of stormwater.</b>	Percent of annual stormwater that is re-used.	Information source	University Of Malta
		Assessment method	The main aim is to calculate the percentage of annual stormwater that is re-used in the local area
		Standard	N.A
<b>E1.7 Consumption of potable water for non-residential building systems.</b>	Annual water consumption per occupant	Information source	University Of Malta
		Assessment method	This indicator calculated the amount of potable water used taking in consideration the total area of University (L/m <sup>2</sup> *yr.) The following is the method on how the result is obtained: 1. For each building the total water consumption was calculated.  2. The aggregated annual total water consumption from all non-residential buildings was
		Standard	N.A

			calculated.
		<i>Standard</i>	N.A
<b>E2.1 Solid waste &amp; recycling collection points.</b>	Proximity of the resident population to the solid waste and recycling collection point.	<i>Information source</i>	University Of Malta
		<i>Assessment method</i>	Percentage of population located 50m from the waste collection points (%)
		<i>Standard</i>	N.A
<b>E2.2 Separate collection and disposal of solid waste and recycling.</b>	Separated collection and disposal of solid waste and recycling.	<i>Information source</i>	University Of Malta
		<i>Assessment method</i>	The value needed for this indicator is the percentage of recycled waste. This was determined by finding the average weight of the black bag waste (tonnes) and the average weight of the grey bag waste (tonnes). The grey bag contains waste to be recycled like plastic and paper whilst the black bag contains solid waste which would not be recycled.
		<i>Standard</i>	N.A
<b>E2.3 Solid waste from construction and demolition projects retained in the area for re-use or recycling.</b>	Volume of materials that will be re-used or recycled from the local area on the total solid waste from construction and demolition of building projects	<i>Information source</i>	University Of Malta
		<i>Assessment method</i>	Construction activities for new buildings and for demolition have traditionally resulted in large amounts of waste materials that have to be taken to solid waste sites. Much of this material is bulky and remains, but not useable, for long periods of time. Experience has shown that significant improvements can be made in reducing waste, either by recycling them or by re-using some of these materials in new projects. For re-use applications, testing or on-site certification by structural engineers may be required.

		Standard	N.A
--	--	----------	-----

F- ENVIRONMENT			
CRITERION	INDICATOR	SPECIFICATIONS	
F1.1 <i>Impact of construction activities on natural features</i>	Preservation of land during and pre construction phase.	Information source	NSO (National Statistic Office)
		Assessment method	This indicator assesses the degree to which construction activities over the last 5-years have had negative effects on natural features of the local area (minor, moderate or major). Building and infrastructure construction projects have had considerable negative impacts on pre-existing land forms and vegetation over the previous 3-year period.
		Standard	N.A
F1.2 <i>Impact of construction activities or landscaping on soil stability or erosion.</i>	Impact degree of construction activities on soil stability.	Information source	NSO (National Statistic Office)
		Assessment method	This indicator assesses the degree to which construction activities over the last 5-years have had negative effects on landscaping and soil stability (minor, moderate or major). Building and infrastructure construction projects have had some negative impacts on landscaping and soil stability over the previous 3-year period.
		Standard	N.A
F1.3 <i>Recharge of groundwater through permeable paving or landscaping.</i>	Area of permeable surfaces on total neighborhood area	Information source	University Of Malta
		Assessment method	To find the total percentage of water which is recharged back to

			the ground. This is done by assessing the different types of ground material found and using a permeability coefficient factor, according to the material.
		<i>Standard</i>	N.A
<b>F1.4 Changes in biodiversity.</b>	Diversity of plant structures.	<i>Information source</i>	NSO (National Statistic Office)
		<i>Assessment method</i>	This indicator aims to promote the diversity of plants and animal biodiversity.
		<i>Standard</i>	N.A
<b>F1.7 Impact of local building user population on peak load capacity of public transport system.</b>	Diversity of plant structures.	<i>Information source</i>	<a href="https://goo.gl/P55vcP">https://goo.gl/P55vcP</a>
		<i>Assessment method</i>	This indicator assesses how much the public transport is being used. The higher the load capacity, the more busses are being utilised. This was worked out using two methods: one method using the Peak passenger load per hour, whilst the other method using the passenger load per day.
		<i>Standard</i>	<a href="https://goo.gl/P55vcP">https://goo.gl/P55vcP</a>
<b>F1.8 Impact of private vehicles used by the local population on peak load capacity of the local road system</b>	Impact degree of private vehicles on the population.	<i>Information source</i>	<a href="https://www.publictransport.com.mt/">https://www.publictransport.com.mt/</a>
		<i>Assessment method</i>	To determine the impact of private vehicles used by the local population on the peak load capacity of the local road system. It is estimated that the use of private vehicles by the local population exceeds the peak load capacity of the local road system, with strongly negative impacts on traffic speeds, air quality, pedestrian and bicycling

			environments, and the function of adjacent buildings. The score given is therefore -1.
		<i>Standard</i>	<a href="https://www.publictransport.com.mt/">https://www.publictransport.com.mt/</a>
<b>F2.10</b> <b>daytime</b> <b>conditions.</b>	<b>Ambient noise</b>	Percentage of building area over noise limit.	<i>Information source</i> ERA, Noise Action Plan , 2013  <i>Assessment method</i> The proposed onset levels, for assessment of noise mitigation measures due to exposure to road traffic noise is: $L_{den} = 65$ dB  <i>Standard</i> ERA, Noise Action Plan , 2013
<b>F2.11</b> <b>Ambient night-time</b> <b>conditions.</b>	<b>Ambient night-noise</b>	Proportion of population exposed to non recommended levels of night noise.	<i>Information source</i> ERA, Noise Action Plan , 2013  <i>Assessment method</i> The proposed onset levels, for assessment of noise mitigation measures due to exposure to road traffic noise $L_{night} = 55$ dB  <i>Standard</i> ERA, Noise Action Plan , 2013
<b>F3.1</b> <b>Green zones &amp; recreation</b> <b>availability</b>	<b>Green zones &amp; recreation areas</b>	Availability of green zones & recreation areas	<i>Information source</i> University Of Malta  <i>Assessment method</i> This indicator assess how much green space there is allocated per worker/student. The units used are $m^2/inhabitant$ .  <i>Standard</i> N.A
<b>F3.2</b> <b>Green zones &amp; recreation</b> <b>accessibility</b>	<b>Green zones &amp; recreation areas</b>	Accessibility of green spaces within the area.	<i>Information source</i> University Of Malta  <i>Assessment method</i> This indicator assesses the average distance to green zones and recreation area for a sample of key residential buildings.  <i>Standard</i> N.A
<b>F3.3</b> <b>Green zones &amp; recreation</b> <b>density</b>	<b>Green zones &amp; recreation areas</b>	Density of green spaces within the area.	<i>Information source</i> University Of Malta  <i>Assessment method</i> This indicator assesses the area of green spaces relative to the total land area.  <i>Standard</i> N.A

<b>F3.6 Tree coverage for shade and management of local ambient temperatures.</b>	Reduction of ambient temperatures through evapo-transpiration.	<i>Information source</i>	<i>University Of Malta</i>
		<i>Assessment method</i>	Deciduous trees can be very effective in shielding people and lower parts of buildings from excessive solar heat gain. The area of deciduous trees relative to the total area is calculated. This indicator seems to be a repeat of indicator F3.2.
		<i>Standard</i>	<i>N.A</i>
<b>F3.7 Green roofs.</b>	Aggregate area of building roofs covered with vegetated material.	<i>Information source</i>	<i>University Of Malta</i>
		<i>Assessment method</i>	
		<i>Standard</i>	<i>N.A</i>
<b>F3.10 Ecological diversity in the area</b>	Diversity of surface and aquatic biota in the local area.	<i>Information source</i>	<i>University Of Malta</i>
		<i>Assessment method</i>	
		<i>Standard</i>	<i>N.A</i>

<b>G- SOCIAL ASPECTS</b>			
<b>CRITERION</b>	<b>INDICATOR</b>	<b>SPECIFICATIONS</b>	
<b>G1.1 Buildings that are accessible for use by physically disabled persons.</b>	Percent of key public, commercial and residential buildings that are accessible for use by physically disabled persons.	<i>Information source</i>	<i>University Of Malta</i>
		<i>Assessment method</i>	
		<i>Standard</i>	<i>N.A</i>
<b>G1.2 Sidewalks and other pedestrian paths that are accessible for use by physically disabled persons.</b>	Percent of sidewalks and other pedestrian ways that are accessible for use by physically disabled persons.	<i>Information source</i>	<i>University Of Malta</i>
		<i>Assessment method</i>	Key pedestrian paths were first and foremost identified. In total 13 routes were recognized, where 7 of them can be accessed by people with physical disabilities.

		Standard	N.A
<b>G1.3 Barrier-free accessibility in local outdoor public areas.</b>	Adequacy of barrier-free accessible public outdoor areas compared to the total public area.	Information source	University Of Malta
		Assessment method	Major outdoor public areas were first and foremost identified. In total, there are 8 outdoor public spaces, where 5 of them can be easily accessed by people with physical disabilities.
		Standard	N.A
<b>G1.4 Ease of access to and use of public transport for physically disabled persons.</b>	Features of public transport to facilitate access physically disabled persons, such as kneeling buses and wide entries..	Information source	University Of Malta
		Assessment method	
		Standard	N.A
<b>G1.5 Objective/subjective safety measures.</b>	Adequacy of signage and traffic calming measures.	Information source	University Of Malta
		Assessment method	By conducting interviews with students and workers it determined that the objective and subjective measures taken to protect the safety of pedestrians, cyclists and drivers are <b>more effective</b> than measures taken in the urban region. This would yield a score of <b>3</b> .
		Standard	N.A
<b>G2.1 Performance of the public transport service.</b>	Percentage of inhabitants that are within 400 meters walking distance of at least one public transportation service stop	Information source	University Of Malta
		Assessment method	This indicator assesses the performance of the public transport service, but it asks for the percentage of the inhabitants in the area within 400 metres of walking distance to a bus stop. This doesn't make sense. The indicator should be asking about the

			efficiency/ inefficiency of the service of the public transport system.
		Standard	N.A
<b>G2.4 Quality of pedestrian and bicycle network.</b>	Total walkway meters of dedicated pedestrian paths and meters of bicycle path per 100 inhabitants	Information source	University Of Malta
		Assessment method	
		Standard	N.A
<b>G2.5 Availability of sheltered bicycle parking facilities.</b>	Sheltered bicycle parking spaces.	Information source	University Of Malta
		Assessment method	This indicator calculates the number of sheltered bicycle parking spaces relative to the total resident population of the locality.
		Standard	N.A
<b>G3.1 Availability of a broadband communication network</b>	Local area with available broadband communication network	Information source	University Of Malta
		Assessment method	Availability of a broadband communication service.
		Standard	N.A
<b>G3.2 Access to a broadband communication network.</b>	Percentage of population with access to broadband communication.	Information source	University Of Malta
		Assessment method	Access to a broadband communication network seem to be quiet repetitive.
		Standard	N.A
<b>G4.1 Availability and proximity of key food and retail services</b>	Percent of residential buildings located within a distance of 300 m. of basic food and household goods.	Information source	University Of Malta
		Assessment method	<ol style="list-style-type: none"> <li>1. Estimate typical walking distances from centres of residential occupancy to key food and retail services.</li> <li>2. Estimate the residential population living within 500 m. of shopping facilities and calculate the percent relative to the total residential population</li> </ol>

		in the local area.	
		Standard	N.A
<b>G4.2 Availability and proximity of key public human services</b>	Percentage of inhabitants that are within 800 meters walking distance of at least 3 key services.	Information source	University Of Malta
		Assessment method	<ol style="list-style-type: none"> <li>1. Identify locations of key services in the local area.</li> <li>2. Calculate the percentage of the inhabitants that are within 800 meters walking distance from at least 3 key services.</li> <li>3. Calculate the percent of residential population located within 600 m. of the 3 key human services.</li> </ol>
		Standard	N.A
<b>G6.1 Involvement of residents in community affairs.</b>	Percentage of resident population above 16 years having an involvement in community affairs.	Information source	University Of Malta
		Assessment method	Calculate the percentage of resident population above 16 years in age having an on-going involvement in community or school associations.
		Standard	N.A
<b>G6.3 Community involvement in urban planning activities</b>	Level of involvement of users in urban planning	Information source	University Of Malta
		Assessment method	Using the Sherry Arnstein ladder on citizen participation, rate the level of users' involvement on planning. The height rungs and 3 degrees of the ladder are provided on the picture.
		Standard	N.A
<b>G7.1 Compatibility of urban design with local cultural values.</b>	Compatibility with local area traditional values of street layouts and the character of urban	Information source	University Of Malta
		Assessment method	Evaluate the compatibility of street layouts and the character of urban

	spaces.		spaces in the local area with traditional cultural values in the region.
		<i>Standard</i>	N.A
<b>G7.2 Compatibility of public open space with local cultural values.</b>	Compatibility with local area traditional values of local public open spaces, including major uses, dimensions and adjacent uses.	<i>Information source</i>	<i>University Of Malta</i>
		<i>Assessment method</i>	Evaluate the compatibility with local area traditional values of local public open spaces, including major uses, dimensions and adjacent uses.
		<i>Standard</i>	N.A
<b>G7.4 Use of traditional local materials and techniques</b>	Compatibility with local area traditional values of construction techniques and types of materials.	<i>Information source</i>	<i>University Of Malta</i>
		<i>Assessment method</i>	Evaluate the compatibility with local area traditional values of construction techniques and types of materials.
		<i>Standard</i>	N.A
<b>G7.5 Maintenance of UNESCO or other protected landscapes</b>	Preventive maintenance and protection of UNESCO or other protected landscapes	<i>Information source</i>	<i>University Of Malta</i>
		<i>Assessment method</i>	Evaluate the preventive maintenance and protection of UNESCO or other protected landscapes.
		<i>Standard</i>	N.A
<b>G8.2 Panoramic and scenic routes or view points.</b>	Presence and quality of scenic routes and places.	<i>Information source</i>	<i>University Of Malta</i>
		<i>Assessment method</i>	Calculate the presence and quality of scenic routes and places that provide views of interesting natural or urban vistas.
		<i>Standard</i>	N.A
<b>G8.3 Perceived safety of public areas for pedestrians.</b>	Perceived safety of public places and pedestrian routes, as determined by a sample of pedestrians.	<i>Information source</i>	<i>University Of Malta</i>
		<i>Assessment method</i>	Evaluate the perceived safety of public places and pedestrian routes, as determined by a sample of pedestrians.
		<i>Standard</i>	N.A

<b>G8.4 Impact of commercial signage on the visual environment.</b>	Visual impact of exterior commercial signage.	<i>Information source</i>	<i>University Of Malta</i>
		<i>Assessment method</i>	Aggregate visual impact of exterior commercial signage, based on degree of integration with building exteriors, diversity in signage dimensions and illumination; as determined by a sample of the local area population.
		<i>Standard</i>	<i>N.A</i>
<b>G8.5 Impact of overhead electric distribution system on the visual environment.</b>	Visual impact of above-grade electrical distribution systems.	<i>Information source</i>	<i>University Of Malta</i>
		<i>Assessment method</i>	Aggregate visual impact of above-grade electrical distribution systems, based on degree of visual clutter; as determined by a sample of the local area population.
		<i>Standard</i>	<i>N.A</i>
<b>G8.6 Perceptual quality of area development.</b>	Perceived quality of the urban area and natural development.	<i>Information source</i>	<i>University Of Malta</i>
		<i>Assessment method</i>	Evaluate the perceived quality of area urban and natural development, as determined by a sample of residents.
		<i>Standard</i>	<i>N.A</i>
<b>G8.7 Aesthetic quality of new facility exteriors.</b>	Perceived quality of the exteriors of new buildings.	<i>Information source</i>	<i>University Of Malta</i>
		<i>Assessment method</i>	Evaluate the perceived quality of the exteriors of new buildings in the local area, as determined by a sample of residents.
		<i>Standard</i>	<i>N.A</i>

# REGIONAL TOOL

## D.3.4.3 Regional Tool - NOA

Version 1.1

Date: March 2019

2.1: To raise capacity for better management of energy in public buildings at transnational level

Work package: WP3 TESTING

Activity: 3.4 Evaluation of test results

Deliverable: 3.4.3 – Regional CESBA MED SNTs

**Responsible Partner:** Andrea Moro, iiSBE Italia R&D

# URBAN SCALE ASSESSMENT

## SNTool structure

A- BUILT URBAN SYSTEMS	
<b>A1</b>	<b>Urban Structure and Form</b>

G8.5	Impact of overhead electric distribution system ☞

## SNTool criteria selection rationale

A- BUILT URBAN SYSTEMS	
CRITERION	REASON / MOTIVATION
A1.2 Urban compactness	Useful and can be calculated
A1.4 Residential density	Useful and relatively easy to calculate
A1.5 Urban street canyons (H/W aspect ratio)	Very important parameter for the building performance, as it influences the microclimate and determines the solar and daylight access
A1.7 Conservation of Land *	KPI

B- ECONOMY	
CRITERION	REASON / MOTIVATION
B2.3 Unemployment rate 🇸🇪	More easy to find data for unemployment rates of the specific area's inhabitants from social services of the Municipality
B2.4 Economic viability of commercial occupancies	Interesting and can be calculated
B2.* Energy poverty of households 🇸🇪	Interesting and can be calculated
B3.3 Use stage energy cost for public office/educational buildings *	KPI

C- ENERGY	
CRITERION	REASON / MOTIVATION
C1.1 Total final thermal energy consumption for building operations *	KPI
C1.3 Total final thermal energy consumption for public office/educational building operations 🇸🇪	Municipalities are responsible for public/municipal buildings. Office and educational buildings are the majority of public buildings. More easy to find data. National policy. Programs for funding retrofit projects
C1.4 Total final electric energy consumption for building operations *	KPI
C1.6 Total final electric energy consumption for public office/educational building operations 🇸🇪	Municipalities are responsible for public/municipal buildings. Office and educational buildings are the majority of public buildings. More easy to find data. National policy. Programs for funding retrofit projects
C1.7 Total primary energy demand for building operations *	KPI
C1.9 Total primary energy demand for public office/educational building operations 🇸🇪	Municipalities are responsible for public/municipal buildings. Office and educational buildings are the majority of public buildings. More easy to find data. National policy. Programs for funding retrofit projects
C1.20 Energy consumption of public lighting	Useful. Municipalities have relevant data
C2.1 Share of renewable energy on-site, on total final thermal energy consumptions for buildings operation *	KPI
C2.4 Share of renewable energy on-site, on total primary energy consumptions for buildings operation *	Useful
C2.6 Share of renewable energy on-site, on total primary energy consumptions for public office/educational building operations 🇸🇪	Municipalities are responsible for public/municipal buildings. Important to show the public authority's attitude towards environmental friendly strategies, More easy to find data. National policy. Programs for funding retrofit projects
C2.7 Share of renewable energy on-site, on final electric energy consumptions *	KPI
C2.8 Share of renewable energy on-site, on final electric energy consumptions for public office/educational building operations 🇸🇪	Municipalities are responsible for public/municipal buildings. Important to show the public authority's attitude towards environmental friendly strategies, More easy to find data. National policy. Programs for funding retrofit projects

**C2.13 Use of RES for thermal energy production in residential buildings**  Easy to calculate

## D- ATMOSPHERIC EMISSIONS

CRITERION	REASON / MOTIVATION
<b>D1.2 Total GHG Emissions from primary energy used in building operations *</b>	KPI

## E- NON - RENEWABLE RESOURCES

CRITERION	REASON / MOTIVATION
<b>E1.6 Consumption of potable water for residential population *</b>	KPI
<b>E1.7 Consumption of potable water for public office/educational building systems *</b>	KPI
<b>E1.8 Consumption of potable water in public spaces</b> 	Significant for municipalities.
<b>E2.1 Solid waste and recycling collection points</b>	Recycling is becoming more and more popular. Easy to define.

## F- ENVIRONMENT

CRITERION	REASON / MOTIVATION
<b>F1.3 Recharge of groundwater through permeable paving or landscaping *</b>	KPI
<b>F1.10 Light pollution caused by exterior public lighting systems</b> 	This could be described through "minor, moderate, major" but it's better to be associated with the type of the street lights causing discomfort KPI
<b>F2.3 Ambient air quality with respect to particulates &lt;10 mu (PM10) over a one year period *</b>	Significant criterion for urban areas
<b>F2.6 Ambient air quality - ozone</b>	Green areas are of vital importance for the sustainability
<b>F3.3 Green zones &amp; recreation areas density</b>	Significant criterion for urban areas
<b>F3.5 Flood protection</b> 	Significant criterion for urban areas
<b>F3.11 Emergency response plan</b> 	Significant criterion for urban areas

## G- SOCIAL ASPECTS

CRITERION	REASON / MOTIVATION
<b>G1.1 Public buildings that are accessible for use by physically disabled persons</b> 	Municipalities are responsible for public/municipal buildings. Important for public authority's to demonstrate "good practice"
<b>G1.2 Sidewalks and other pedestrian paths that are accessible for use by physically disabled persons</b>	Significant criterion
<b>G2.1 Performance of the public transport *</b>	KPI
<b>G2.3 Smart services</b>	Significant criterion for the future
<b>G2.4 Quality of pedestrian and bicycle network *</b>	KPI

G4.2 Availability and proximity of key services *	KPI
G4.3 Availability and proximity of public schools 🚶	Better to evaluate public schools in one indicator.
G4.6 Availability and proximity of public leisure facilities 🚶	Better to evaluate public leisure facilities in one indicator.
G6.3 Community involvement in urban planning activities*	KPI
G8.3 Perceived safety of public areas for pedestrians	Safety is significant for urban areas
G8.5 Impact of overhead electric distribution system 🚶	Significant criterion since it affects human health

## SNTool benchmarks rationale

A- URBAN STRUCTURE AND FORM				
CRITERION	INDICATOR	UNIT	BENCHMARK	RATIONALE
A1.2	Relation between the usable space of the buildings (volume) and the net developable area (area).	m³/ha	0: 60,000	
			5: 30,000	
		Based on the Hellenic New Building Regulation the ratio of the usable space of the buildings (volume) to the net developable area (area) ranges between 6 and 3 m³/m².		
A1.4	The ratio of total residential population relative to the total land area for all developed residential blocks within the local area.	pp/ha	0: 600	
			5: 100	
		Values between 100-600 persons / ha are typical for most urban and semi-urban areas		
A1.5	The ratio of typical building heights compared to the distance between building facades on the other side of the street	-	0: 0.1	
			5: 0.5	
		In order to have efficient solar exposure during winter in urban areas, a typical value for the ratio of building heights compared to the distance between building facades on the other side of the street is 0.5		
A1.7	Undeveloped land considered to be of value for ecological or agricultural purposes	%	0: 10	
			5: 20	
		Indicative empirical values.		

B- ECONOMY				
CRITERION	INDICATOR	UNIT	BENCHMARK	RATIONALE
B2.3	Average unemployment rate, over a 5-year period	%	0: 10 5: 5	Score 0 corresponds to statistical data
B2.4	Ratio of vacancies in commercial buildings (offices, shops), over a 5-year period.	%	0:25 5: 5	Score 0 corresponds to statistical data
B2.5	Ratio of households suffering from energy poverty	%	0:10 5: 5	Score 0 corresponds to statistical data
B3.3.	Annual energy costs of public office/educational buildings	Euro/m <sup>2</sup>	0: 17.7 5:4.1	Score 0 corresponds to the energy cost for the thermal and electrical energy consumption of the public office/educational building of the dominant energy class (as estimated in C1.3 and C1.6), while Score 5 to the energy cost for consumptions of energy class A+. It is assumed

		that thermal energy is covered by fuel oil. An increase of 20% is considered in order to take into account energy cost for equipment and installations.
--	--	---

C- ENERGY				
CRITERION	INDICATOR	UNIT	BENCHMARK	RATIONALE
C1.1	Urban thermal energy consumption of building operations	kWh/m2	0: 314.0 (323.2)	Very difficult to get metered data, especially for residential and privately owned non-residential buildings.
			5: 21.1 (16.1)	Use of statistical / calculated data.
		<p>Thermal energy consumption for all building uses, was defined as the weighted average for different building uses. The breakdown of whole buildings per building use in city Prefecture was defined using data from the Hellenic Statistical Authority (HSA). Due to lack of significant sample for a Municipality, the weighted average was not used for the local benchmarking.</p> <p>The average thermal consumption for whole buildings per building use and energy class was defined using data from the Energy Performance Certificates (EPC) electronic repository (buildingcert). For this reason, calculated data for thermal consumption for space heating (SH) and Domestic Hot Water (DHW) from a single fuel (fuel oil, natural gas or biomass), were used, and also adapted for external (TEEKENAK) to internal (CESBAMED) dimensions.</p> <p>For each building use, <u>score 0</u> corresponds to the consumption of the dominant energy class, while <u>score 5</u> to the consumption of energy class A+ (33% of class B).</p>		
C1.3	Urban thermal energy consumption of public office/educational building operations	kWh/m2	0: 68.1 (62.3)	Very difficult to get metered data.
			5: 11.5 (10.5)	Use of statistical / calculated data.
C1.4	Urban electrical energy consumption of building operations	kWh/m2	0: 64.2 (67.6)	Very difficult to get metered data, especially for residential and privately owned non-residential buildings.
			5: 7.9 (10.8)	Use of statistical / calculated data.
		<p>Similar to C1.1 with the exception that all end uses (space heating, space cooling and domestic hot water) were taken into account.</p>		
C1.6	Urban electrical energy consumption of public office/ educational building operations	kWh/m2	0: 90.1 (100.5)	Very difficult to get metered data.
			5: 24.1 (32.6)	Use of statistical / calculated data.
C1.6	Urban electrical energy consumption of public office/ educational building operations	<p>No weighted average for building uses. Averages from EPC for office/ educational building uses, similar to C1.4.</p>		

C1.7	Annual total primary energy consumption per internal useful floor area	kWh/m2	0: 461.9 (528.2)	Very difficult to get metered data, especially for residential and privately owned non-residential buildings. Use of statistical / calculated data.
			5: 38.2 (41.9)	
		Similar to C1.1, with the exception that all end uses (space heating, space cooling and domestic hot water) were taken into account.		
C1.9	Annual total primary energy consumption per internal useful floor area of public office/ educational buildings	kWh/m2	0: 286.4 (346.9)	Very difficult to get metered data. Use of statistical / calculated data.
			5: 74.5 (94.4)	
		Similar to C1.3, with the exception that all end uses (space heating, space cooling and domestic hot water) were taken into account.		
C1.20	Annual electrical consumption by outdoor public lighting systems	kWh/m2	0: 0.72	For calculated data.
			5: 0.50	
		From discussions with a member of Local Committee, expert on lighting, Score 0 the consumption for a typical public lighting planning for neighborhoods during 1990. Score 5 "about 30% decrease for new led lighting fixtures"		
C2.1	Ratio of on-site renewable thermal energy consumption to the total thermal energy consumptions of all buildings	%	0: 4	Very difficult to get metered data. Use of statistical/ estimated/ calculated data.
			5: 14	
		<u>Score 0</u> corresponds to 50% of the buildings covering 60% of their DHW energy consumption from on-site renewable energy sources. <u>Score 5</u> corresponds to 100% of the buildings covering 100% of their DHW energy consumption from on-site renewable energy sources. The average ratio of the DHW energy consumption to the thermal energy consumption for whole buildings was defined using calculated data from the Energy Performance Certificates (EPC) electronic repository (buildingcert). (Buildings with fuel oil, natural gas or biomass for space heating and electricity, fuel oil, natural gas or biomass for DHW).		
C2.7	Ratio of on-site renewable electrical energy consumption to the total electrical energy consumption of all buildings	%	0: 1	Very difficult to get metered data. Use of statistical/ estimated data.
			5: 47	

		<p>The breakdown of whole buildings in residential and non-residential was defined using data from the Hellenic Statistical Authority (HAS) (the breakdown is almost similar for the Municipality of Fylis).</p> <p><u>Score 0</u> corresponds to 5% of the residential buildings covering 25% of their electrical energy consumption from on-site renewable energy sources,</p> <p><u>Score 5</u> corresponds to 50% of the residential and 20% of the non-residential buildings covering 100% of their electrical energy consumption from on-site renewable energy sources.</p>		
C2.8	Ratio of on-site renewable electrical energy consumption to the total electrical energy consumption of public office/ educational building	%	0: 0	Very difficult to get metered data.
			5: 20	Use of statistical/ estimated data
		<p><u>Score 0</u> corresponds to 0% of the public office/ educational buildings covering a part of their electrical energy consumption from on-site renewable energy sources,</p> <p><u>Score 5</u> corresponds to 20% of the public office/ educational buildings covering 100% of their electrical energy consumption from on-site renewable energy sources.</p>		
C2.13	Ratio of residential buildings with renewable systems for thermal energy production	%	0: 38	Score 0 corresponds to the average number of households with solar collectors (data from the Hellenic Statistical Authority)
			5: 100	

D- ATMOSPHERIC EMISSIONS				
CRITERION	INDICATOR	UNIT	BENCHMARK	RATIONALE
D1.2	CO2 equivalent emissions per useful internal floor area per year	kg CO2 eq./m2/yr	0: 46	
			5: 5	
		<p><u>Score 0</u> corresponds to CO2 equivalent emissions for the thermal and electrical energy consumption of the buildings of the dominant energy class</p> <p><u>Score 5</u> corresponds to the CO2 equivalent emissions for consumptions of energy class A+ (as estimated in C1.1 and C1.4). It is assumed that thermal energy is covered by fuel oil.</p>		

E- NON-RENEWABLE RESOURCES				
CRITERION	INDICATOR	UNIT	BENCHMARK	RATIONALE
E1.6	Water consumption per inhabitant in residential buildings (annually)	m <sup>3</sup> / occupant	0: 62.1	Use of statistical/ estimated data
			5: 18.6	
		<p><u>Score 0</u> based on statistical data from ELSTAT.</p> <p><u>Score 5</u> corresponds to a reduction up to 70%</p>		

			of the typical consumption, based on a published article.	
E1.7	Water consumption per m <sup>2</sup> in public office/educational buildings (annually)	m <sup>3</sup> / m <sup>2</sup>	0: 0.65	
			5: 0.33	
		<u>Score 0</u> corresponds to the weighted average of the water consumption for school and educational buildings, based on their surface. <u>Score 5</u> corresponds to a reduction up to 50%, based on discussions with National Local Committee Members.		
E1.8	Water consumption in public spaces	m <sup>3</sup> / m <sup>2</sup> watered surface	0: 0.73	
			5: 0.51	
		<u>Score 0</u> corresponds to the weighted average of the water consumption for school and educational buildings, based on their surface. <u>Score 5</u> corresponds to a reduction up to 30%, based on discussions with National Local Committee Members.		
E2.1	Ratio of residents located within a walking distance of 100 m from solid waste and recycling collection point.	%	0: 60	Based on discussions with National Local Committee Members
			5: 100	

## F- ENVIRONMENT

CRITERION	INDICATOR	UNIT	BENCHMARK	RATIONALE
F1.3	Percentage of water flowing through the ground	%	0: 15	Based on discussions with National Local Committee Members
			5: 80	
F1.10	Ratio of cut-off public lighting fixtures	%	0: 10	Based on discussions with National Local Committee Members
			5: 100	
F2.3	Number of days exceeding the daily limits for PM10 in a year	days	0: 35	Score 0 based on European Air quality Standards
			5: 0	
F2.6	Number of days exceeding the daily limits for ozone in a year	days	0: 25	Score 0 European Air quality Standards
			5: 0	
F3.3	Ratio of green spaces to the total area	%	0: 5	Based on discussions with National Local Committee Members
			5: 30	
F3.5	Flood protection	Text	0:	There is an implemented flood protection plan, but it hasn't been tested yet
			5:	There is an implemented flood protection plan, it has been successfully tested

F3.11	Emergency response plan	Text	0:	There is an emergency response plan on a local level. No operational exercises
			5:	There is an emergency response plan on a local level. Scheduled operational exercises

G- SOCIAL ASPECTS				
CRITERION	INDICATOR	UNIT	BENCHMARK	RATIONALE
G1.1	Percent of key public, buildings that are accessible for use by physically disabled persons	%	0: 50	Based on discussions with National Local Committee Members
			5: 100	
G1.2	Sidewalks and other pedestrian ways that are accessible for use by physically disabled persons	Text	0:	Sidewalks and pedestrian ways of the main network, accessible by physically disabled persons
			5:	All sidewalks and pedestrian ways accessible by physically disabled persons. Traffic lights with sound in all main roads.
G2.1	Percent of inhabitants that are within 400 meters walking distance of at least one public transportation stop	%	0: 50	Based on discussions with National Local Committee Members
			5: 100	
G2.3	Availability of smart services	Text	0:	Automated bicycle rental system
			5:	Free charging station for electric or plug-in hybrid vehicle
G2.4	Total walkway meters of dedicated pedestrian paths and meters of bicycle path per 100 inhabitants	m/100 inhabitants	0:2	Based on statistical data ( <a href="https://www.smu.gr/greece_cycle_map/">https://www.smu.gr/greece_cycle_map/</a> )
			5: 20	Based on data from a generic Municipality which is considered as good example
G4.2	Percentage of inhabitants within 800m walking distance of at least 3 key services	%	0: 50	Based on discussions with National Local Committee Members
			5: 90	
G4.3	Percent of inhabitants within 700m walking distance from at least one public school	%	0: 70	Based on discussions with National Local Committee Members
			5: 100	
G4.6	Percent of inhabitants located within a distance of 1000 m from at least one public leisure facility	%	0: 50	Based on discussions with National Local Committee Members
			5: 100	

G6.3	Level of involvement of users in urban planning.	Text	0:	Degree of tokenism. Providing inhabitants and users mainly with the information about the urban project
			5:	Degree of citizens power at all stages of the project
G8.3	Perceived safety of public places and pedestrian routes	Text	0:	Adequate safety only during daytime.
			5:	Very high safety during daytime and night
G8.5	Health and safety risks from overhead electric distribution system	Text	0:	Overhead high power cables at least 100m from the buildings or/and overhead MV power cables with voltage transformers close to the buildings
			5:	No overhead electric distribution system

## SNTool Criteria Specifications

A- BUILT URBAN SYSTEMS			
CRITERION	INDICATOR	SPECIFICATIONS	
A1.2	Urban compactness	Information source	Measured data, studies
		Assessment method	<p>CESBAMED calculation steps:</p> <ol style="list-style-type: none"> <li>1. Calculate the aggregate gross volume of all buildings in the local area, <math>m^3</math>.</li> <li>2. Calculate the net developable area by subtracting the surface area used for parks, streets, parking and pedestrian areas from the gross surface area of the local area, ha.</li> <li>3. Determine the ratio of the aggregate volume of buildings to the net local developable area, <math>m^3/ha</math>.</li> </ol> <p>NOA pilot steps/comments:                      Define the number of buildings included in the selected area. Define the land area covered by buildings. Define the number of floors for each building. Assuming typical floor height about 3.5 m, calculate the volume of each building above ground. Calculate the ratio of the total volume of the buildings above ground to the land area covered by buildings (27909 <math>m^3/ha</math>)</p>
		Standard	Insert text here

		Information source	Measured data, studies, statistical data
A1.4	Residential density	Assessment method	<p>CESBAMED calculation steps:</p> <ol style="list-style-type: none"> <li>1. Identify ground surface area of properties being used for residential purposes, <math>m^2</math>.</li> <li>2. Identify the total residential population for the relevant residential buildings.</li> <li>3. Calculate the residential density.</li> </ol> <p>NOA pilot steps/comments:</p> <p>From an on-site audit in the testing area, the number of residential buildings, the land area covered by residential buildings, as well as the number of households were defined. According to ELSTAT, the typical number of persons in the average household of West Region of Attica Prefecture, is 3. The total number of residents in the selected area was calculated. The ratio of the number of residents to the land area covered by residential buildings was calculated. (151 residents/ha)</p>
		Standard	Insert text here
		Information source	Measured data, estimations
A1.5	Urban street canyons (H/W aspect ratio)	Assessment method	<p>CESBAMED calculation steps:</p> <p>Calculate the ratio of typical building heights compared to the distance between building facades on opposite sides of the street</p> <p>NOA pilot steps/comments:</p> <p>From an on-site audit in the testing area, the width of the roads, as well as the number of floors for all buildings were defined. Define the typical road width (8m). For these roads define the number of floors of the typical building (2). Assuming typical floor height about 3.5 m, calculate the ratio height to width (0.9)</p>
		Standard	Insert text here
		Information source	Measured data, studies
A1.7	Conservation of Land *	Assessment method	<p>CESBAMED calculation steps:</p> <ol style="list-style-type: none"> <li>1. Determine the gross surface area of the neighbourhood</li> <li>2. Determine the aggregate surface area of land that is considered by authorities to be of ecological and agricultural value</li> <li>3. Subtract the aggregate undeveloped area from the gross surface area of the urban area, which should equal to the total area developed for buildings, streets, vehicle parking and other infrastructures</li> </ol>

		NOA pilot steps/comments: From maps of the area, the land that is considered as ecological and agricultural was defined. (0%)

C1.4	Total final electric energy consumption for building operations *	<p>Information source</p> <p>Assessment method</p>
		<p>Calculated – Monitored data. For the evaluation of the actual performance of the urban area it is preferable to use metered data. If metered data aren't available, estimated data should be used.</p> <p>CESBAMED calculation steps: The following energy uses are considered:</p>

heating, cooling, ventilation, auxiliaries, domestic hot water and lighting

Use of calculated data:

1. For each building in the local area, calculate the annual final electric energy consumption in kilowatt hours, kWh.
2. Sum the annual final electric energy consumption of each building.
3. Sum the internal useful area of each building in the area, m<sup>2</sup>.
4. Calculate the indicator's value as: aggregated annual total final electric energy consumption/ aggregated internal useful area, kWh/m<sup>2</sup>

Calculations are based on EN 13790 using the quasi-steady state monthly method

Use of monitored/ metered data:

1. For each building in the local area, collect the metered annual final electric energy consumption, kWh
  2. Sum the annual final electric energy consumption of each building
  3. Sum the internal useful area of each building in the area, m<sup>2</sup>.
  4. Calculate the indicator's value as: aggregated annual total final electric energy consumption/ aggregated internal useful area, kWh/m<sup>2</sup>
- The metered energy consumption is suitable for the indicator's calculation only if the building has been in use for 3-years

NOA pilot steps/comments:

From calculated - statistical data. The average electric energy consumption for buildings within the testing area was defined based on the average electric energy consumption for residential and non residential buildings in Attica Prefecture using data for whole buildings from the Energy Performance Certificates (EPC) electronic repository (buildingcert), as well as calculated data for the public office/educational buildings from an energy study carried out for the Municipal Unit of Ano Liosia, and also adapted for external (TEEKENAK) to internal (CESBAMED) dimensions. From an on-site audit in the testing area, the total floor area of all buildings as well as of residential buildings (internal dimensions) were estimated. (77.7 kWh/m<sup>2</sup>)

		Standard	Insert text here
C2.1	Share of renewable energy on-site, on total final thermal energy consumptions for buildings operation *	Information source	Calculated – Monitored data. For the evaluation of the actual performance of the urban area it is preferable to use metered data. If metered data aren't available, estimated data should be used.
		Assessment method	<p>CESBAMED calculation steps:</p> <p>The following energy uses are considered: heating, cooling, domestic hot water.</p> <p>Use of estimated data:</p> <ol style="list-style-type: none"> <li>1. For each building in the local area, calculate the annual final thermal energy consumption, kWh</li> <li>2. Sum the annual final thermal energy consumption of each building</li> <li>3. For each building in the local area, calculate the annual final thermal energy consumption from on-site renewable energy sources, kWh</li> <li>4. Sum the annual final thermal energy consumption from on-site renewable sources of each building</li> <li>6. Calculate the indicator as: annual total final thermal energy consumption from on-site renewable sources / annual total final thermal energy consumption.</li> </ol>

Calculations are based on EN 13790 using the quasi-steady state monthly method.

Use of metered data:

1. For each building in the local area, collect the metered annual final thermal energy consumption, kWh
2. Sum the annual final thermal energy consumption of each building
3. For each building in the local area, collect the monitored annual final thermal energy consumption from on-site renewable sources, kWh
4. Sum the annual final thermal energy consumption from on-site renewable sources of each building
5. Calculate the indicator as: annual total thermal energy generation from on-site renewable energy sources / annual total final thermal energy consumption.

The metered energy consumption is suitable for the indicator's calculation only if the building has been in use for 3-years

NOA pilot steps/comments:

From calculated - statistical – estimated data. From an on-site audit in the testing area, the total number of households and the number of solar collectors were defined. Assuming that each solar collector corresponds to one household, the percentage of households with solar collectors was defined. The total floor area of all buildings as well as of households with solar collectors (internal dimensions) was estimated. The average thermal consumption for domestic hot water in residential buildings within the testing area, was defined based on the average thermal consumption for buildings in Attica Prefecture, using data for whole buildings from the Energy Performance Certificates electronic repository (buildingcert). Assuming that households with solar collector cover 60% of their energy consumption for domestic hot water (according to KENAK), the total thermal energy consumption from on-site renewable energy sources was defined as the 60% of the product of the average thermal energy consumption for DHW with the total floor area of households with solar collectors in the area. The thermal consumption for all buildings within testing area, was defined as the product of the average thermal energy consumption (from C1.1) with the total floor area of all buildings in the area. The ratio of the total thermal energy consumption from on-site renewable energy sources to the total thermal consumption for all

C2.4		buildings was calculated (3.4%) <b>COMMENT: If the denominators was not defined by the average thermal energy then it should be calculated as the thermal consumption (non renewable) plus the total thermal energy consumption from on-site renewable energy sources</b>
	Standard	EN 13790 (Energy performance of buildings. Calculation of energy use for space heating and cooling) 2013/114/EU: Commission Decision of 1 March 2013.
	Information source	Calculated – Monitored data. For the evaluation of the actual performance of the urban area it is preferable to use metered data. If metered data aren't available, estimated data should be used.
	Assessment method	CESBAMED calculation steps: The following energy uses are considered: heating, cooling, ventilation, auxiliaries, domestic hot water and lighting 1. For each building in the local area, calculate or collect the metered annual final (thermal and electric) energy consumption, kWh 2. Sum the annual final energy consumption of each building up to an aggregated annual final energy consumption per energy carrier 3. For each building in the local area, calculate the annual final thermal energy consumption from on-site renewable energy sources, kWh 4. Using the national conversion factors, convert the aggregated annual final energy consumption per energy carrier in annual primary energy consumption per energy carrier, kWh. 5. Sum the annual primary energy consumption per energy carrier up to an aggregated annual total primary energy consumption, kWh. 6. For each building in the local area, calculate the annual final (thermal and electric) energy consumption per on-site renewable energy source (P.V, solar thermal panels), kWh 7. Sum the annual final energy consumption from on-site renewable energy sources of each building up to an aggregated annual final energy consumption per on-site renewable energy source, kWh. 8. Using the national conversion factors, convert the aggregated annual final energy consumption per on-site renewable energy source in annual primary energy consumption per on-site renewable energy source, kWh. Estimate the total primary energy from RES for each energy carrier displaced, e.g. electricity from PVs that displaces electricity from the grid or thermal energy from solar collectors that displaces the use of heating oil 9. Sum the annual primary energy consumption

Share of renewable energy on-site, on total primary energy consumptions for buildings operation.

	<p>per on-site renewable energy source up to an aggregated annual total primary energy consumption from on-site renewable energy sources (kWh/year).</p> <p>10. 		Standard	<p>EN 13790 (Energy performance of buildings. Calculation of energy use for space heating and cooling)</p> <p>2013/114/EU: Commission Decision of 1 March 2013.</p>
		Information source	Metered data
		Assessment method	<p>CESBAMED calculation steps: Define the number of households with solar collectors. Calculate the ratio of households with solar collectors to the total number of households.</p> <p>NOA pilot steps/comments: From metered - estimated data. From an on-site audit in the testing area, the total number of households and the number of solar collectors were defined. Assuming that each solar collector corresponds to one household, the ratio of households with solar collectors to the total number of households was defined. (65%)</p>
		Standard	

D- ATMOSPHERIC EMISSIONS			
CRITERION	INDICATOR	SPECIFICATIONS	
D1.2	Total GHG Emissions from primary energy used in building operations *	Information source	Estimated data
		Assessment method	CESBAMED calculation steps: 1. For each building in the area calculate the

	<p>emissions of CO2 eq. with the following formula:</p> $E = \left[ \sum (Q_{fuel,i} \times LHV_i \times k_{em,i}) + (Q_{el} \times k_{em,el}) + (Q_{dh} \times k_{em,dh}) \right]$ <p>Q<sub>fuel,i</sub> = annual quantity of i-th fuel (m3 or Kg)  Q<sub>el</sub> = annual quantity of electric energy from the grid (kWh)  Q<sub>dh</sub> = annual quantity of energy from district heating/cooling (kWh)  LHV<sub>i</sub> = lower heating value of the i-th fuel (kWh/m3 or kWh/Kg)  K<sub>em,i</sub> = CO2 eq. emission factor of the i-th fuel (Kg CO2/kWh)  K<sub>em,i</sub> = CO2 eq. emission factor of the electric energy from the grid (Kg CO2/kWh)  K<sub>em,i</sub> = CO2 eq. emission factor of energy from district heating/cooling (Kg CO2/kWh)</p> <p>2. Calculate the aggregated annual total CO2 equivalent emissions from all buildings / total useful internal floor area of all buildings</p> <p>NOA pilot steps/comments:  From calculated - statistical – estimated data.  From an on-site audit in the testing area, the total floor area of all buildings (internal dimensions) was estimated. Using data for whole buildings from the Energy Performance Certificates electronic repository for the Municipal Unit of Ano Liossia, the average thermal consumption and the average electric energy consumption for buildings were defined. Thermal energy is only from fuel oil. Based on the national conversion factors to COeq (20704.1 kg/GWh for fuel oil and 61123.9 kg/GWh for electricity), total CO2 equivalent emissions from all buildings to total useful internal floor area of all buildings was calculated (10.9 kg/m<sup>2</sup>)</p> <p>Standard</p> <p>EN 15603 (Energy performance of buildings - Overall energy use and definition of energy ratings)</p>

E- NON-RENEWABLE RESOURCES		
CRITERION	INDICATOR	SPECIFICATIONS
E1.6	Consumption of potable water for residential population *	<p>Information source</p> <p>Metered data. The use of estimated data is preferable for scenarios' evaluation or if metered data is not available.</p> <p>Assessment method</p> <p>CESBAMED calculation steps:  The following water uses are considered:  drinking water; water for sanitation; domestic hot water;  water for cleaning, water for washing machine, water for dishwasher  1. For each residential building, collect the</p>

monitored annual potable water consumptions for building operation. The consumption data must be estimated taking the average over 3 years period,  $m^3$ .

2. Sum the annual potable water consumption of each building up to an aggregated annual total potable water consumption,  $m^3$ /year.
3. Estimate the number of residential buildings' occupants.
4. Calculate the indicator's value as: aggregated annual total potable water consumption / number of occupants.

*NOA pilot steps/comments:*  
From calculated - statistical – estimated data. From an on-site audit in the testing area, the number of households was defined. According to ELSTAT, the typical number of persons in the average household of West Region of Attica Prefecture, is 3. From statistica ldata (<http://eekp.gr/wp-content/uploads/2013/09/arxeio12.2.pdf>) the daily water consumption per (3-persons) household is 0.489 $m^3$ . The ratio of the annual water consumption for the households of the testing area to the residents was calculated. (59.5  $m^3$ /occupant)

#### Standard

<p><b>E1.7</b></p> <p>Consumption of potable water for public office/ educational building systems *</p>	<p>Information source</p>	<p>Metered data. The use of estimated data is preferable for scenarios' evaluation or if metered data is not available.</p>
	<p>Assessment method</p>	<p>CESBAMED calculation steps: The following water uses are considered: drinking water; water for sanitation; domestic hot water; water for cleaning, water for washing machine, water for dishwasher</p> <ol style="list-style-type: none"> <li>1. For each public office/ educational building, collect the monitored annual water consumptions for building operation, <math>m^3</math>. The consumption data must be estimated taking the average over 3 years period</li> <li>2. Sum the annual water consumption of each building up to an aggregated annual total water consumption</li> <li>3) Estimate the total useful internal floor area of all buildings.</li> <li>4) Calculate the indicator's value as: aggregated annual total water consumption / total useful internal floor area of all buildings.</li> </ol> <p><i>NOA pilot steps/comments:</i> Metered data not available for the public buildings of the Municipality. From the</p>

corresponding department of the Municipality, the annual water consumption was not officially reported, but estimated. From an energy study carried out for the Municipal Unit of Ano Liosia, the total internal surface of all public buildings was available. The ratio of annual total water consumption to the **total useful internal floor area** of all buildings was calculated ( $0.65 \text{ m}^3/\text{m}^2$ )  
**COMMENT: The units should be  $\text{m}^3/\text{person}$**

#### Standard

E1.8	Consumption of potable water in public spaces	Information source	Estimated or metered data.
		Assessment method	<p>CESBAMED calculation steps:</p> <ol style="list-style-type: none"> <li>1. Calculate the annual water consumption of potable water in public spaces (for cleaning / watering purposes)</li> <li>2. Calculate the total cleaned / watered area.</li> <li>3. Calculate the ratio of annual water consumption to the cleaned / watered area.</li> </ol> <p>NOA pilot steps/comments:                      Metered data not available for the public buildings of the Municipality. From the corresponding department of the Municipality, the annual water consumption was not officially reported, but estimated (<math>0.99 \text{ m}^3/\text{m}^2</math>)</p>

## G- SOCIAL ASPECTS

CRITERION	INDICATOR	SPECIFICATIONS	
G1.1	Public office/ educational buildings that are accessible for use by physically disabled persons	Information source	Metered data
		Assessment method	<p>CESBAMED calculation steps: 1. Define the number of public office/ educational buildings with full accessibility of exterior parking and pedestrian access areas, considering all major disability types. 2. Calculate the percent of public buildings that may be considered accessible by physically disabled persons.</p> <p>NOA pilot steps/comments: From the corresponding department of the Municipality, the percent of public office/ educational buildings that may be considered</p>

accessible by physically disabled persons, was defined. (30%)

Standard

<b>G1.2</b>	Sidewalks and other pedestrian paths that are accessible for use by physically disabled persons	Information source	Metered data
		Assessment method	<p>CESBAMED calculation steps: Evaluation of the extend to which the sidewalks and pedestrian ways of the main and the secondary network are accessible by physically disabled persons</p> <p>NOA pilot steps/comments: From an on-site audit in the testing area. Sidewalks and pedestrian ways of the main network are not accessible by physically disabled persons.</p>

Standard

<b>G2.1</b>	Performance of the public transport *	Information source	Estimated data
		Assessment method	<p>CESBAMED calculation steps: For the calculation of the indicator only residents (and not working people in the area) are considered Percentage of inhabitants that are within 400 meters walking distance of at least one public transportation service stop To be considered valid for the calculation, a stop must have a daily total service frequency of at least 20 trips.</p> <p>NOA pilot steps/comments: From metered data. From a study carried out by the Municipality for the public transport, the number and location of public transport stops was defined. (100%)</p>

Standard

Global Platform for Sustainable Cities – Urban Sustainability Framework

<b>G2.3</b>	Smart services	Information source	Estimated data
		Assessment method	<p>CESBAMED calculation steps: Evaluation of the presence of smart services</p> <p>NOA pilot steps/comments: From the corresponding department of the Municipality, there is free wifi network in some public spaces.</p>

Standard

		Information source	Metered data
G2.4	Quality of pedestrian and bicycle network *		<p>CESBAMED calculation steps:</p> <ol style="list-style-type: none"> <li>1. Estimation of the number of inhabitants in the area</li> <li>2. Calculation of the walkway meters of dedicated pedestrian paths in the area (A)</li> <li>3. Calculation of the meters of bicycle paths in the area (B)</li> <li>4. Calculation of the meters of shared spaces (C)</li> <li>5. Calculation of the indicator's value as <math>(A+B+C)/(100 \text{ inhabitants})</math></li> </ol> <p>Bicycle paths and pedestrian paths have to be safe and physically separated to traffic roads to be considered in the calculation. A walkway adjacent to a traffic road is not acceptable. A "shared space" is an urban design approach that minimizes the segregation between modes of road user (car, pedestrian, bicycle, etc.)</p>
		Assessment method	<p>NOA pilot steps/comments:</p> <p>From metered data. From an on-site audit in the testing area, the total length of dedicated pedestrian and bicycle paths and "shared space" per 100 inhabitants. was defined. (188.8 m/100 inhabitants)</p> <p><b>COMMENT: This indicator is biased, especially when the area is underpopulated, the calculated value is high even with small pedestrian and bicycle networks. Maybe the unit should be the length of pedestrian and bicycle paths and shared areas to the total street length of the area. An other issue that should be taken into account, is the connectivity of these paths, i.e. bicycle paths are connected with bicycle paths from surrounding areas, or are circular.</b></p>

#### Standard

		Information source	Metered data
G4.2	Availability and proximity of key services *		<p>CESBAMED calculation steps:</p> <ol style="list-style-type: none"> <li>1. Identify locations of key services in the local area.</li> <li>2. Calculate the percentage of the inhabitants that are within 800 meters walking distance from at least 3 key services coming from the nine categories below.</li> </ol> <p>Key services are:</p> <ol style="list-style-type: none"> <li>1. Education (schools, kindergartens, education centers, etc.)</li> <li>2. Health center (hospitals, medical ward, medical center, etc.)</li> </ol>
		Assessment method	

		<p>3. Law enforcement areas (police station, etc.)</p> <p>4. Sport facilities</p> <p>5. Food shops</p> <p>6. Bank</p> <p>7. Post office</p> <p>8. Pharmacy</p> <p>9. Shopping center</p> <p>Consider only one key service from each of the nine categories.</p> <p>Private services can be considered.</p> <p>NOA pilot steps/comments:</p> <p>From metered data. From an on-site audit in the testing area, the location of key services and the number of households were defined. According to ELSTAT, the typical number of persons in the average household of West Region of Attica Prefecture, is 3. The total number of residents in the selected area was estimated. The percentage of the inhabitants that are within 800 meters walking distance from at least 3 key services was calculated (100%)</p> <p><b>COMMENT: Key services are not of equal importance. The categories should be regrouped, into 4: Education, Health center, Law enforcement areas, Other</b></p>	
		Standard	Global Platform for Sustainable Cities – Urban Sustainability Framework
G4.3	Availability and proximity of public schools	Information source	Metered - Estimated data
			<p>CESBAMED calculation steps:</p> <p>1. Identify the public schools.</p> <p>2. Calculate the radius between the buildings and the schools</p> <p>3. Calculate the percentage of inhabitants that are within a radius of 700 meters from at least one public school</p>
		Assessment method	<p>NOA pilot steps/comments:</p> <p>From metered and estimated data. # REGIONAL TOOL

## D.3.4.3 Regional Tool - EIHP

Version 1.1

Date: March 2019

2.1: To raise capacity for better management of energy in public buildings at transnational level

Work package: WP3 TESTING

Activity: 3.4 Evaluation of test results

Deliverable: 3.4.3 – Regional CESBA MED SNTs

**Responsible Partner:** Andrea Moro, iiSBE Italia R&D

# URBAN SCALE ASSESSMENT

## SNTool structure

A- BUILT URBAN SYSTEMS	
A1	Urban structure and form
A1.2	Urban compactness
A1.4	Residential density
A1.7	Conservation of Land
A2	Transportation infrastructure
A2.2	Walking distance to public transport for area workers and students
A2.9	On-street and indoor parking spaces relative to local population
A2.10	Intermodality facilities
B- ECONOMY	
B1	Economic Structure and Value
B1.1	Affordability of housing property
B1.6	Percent of residential units in the neighbourhood that are vacant
B2	Economic activity
B2.2	Average annual per-capita income of residents
B3	Cost and Investment
B3.3	Use stage energy cost for public buildings
B3.4	Levels of total public and private investment
C- ENERGY	
C1	Non-renewable energy
C1.1	Total final thermal energy consumption for building operations
C1.4	Total final electrical energy consumption for building operations
C1.7	Total primary energy demand for building operations
C2	Renewable and Decarbonised energy
C2.1	Share of renewable energy on-site, on total final thermal energy consumption for buildings operation
C2.4	Share of renewable energy on-site, relative to total primary energy consumption for building operations
C2.7	Share of renewable energy on-site, on final electric energy consumption
D- ATMOSPHERIC EMISSIONS	
D1	Atmospheric emissions
D1.2	GHG emissions from primary energy used in building operations
D1.7	Total GHG Emissions from buildings, private and public mobility
E- NON - RENEWABLE RESOURCES	
E1	Potable water, stormwater and greywater
E1.6	Consumption of potable water for residential population
E1.7	Consumption of potable water for public non-residential building systems
E2	Solid and Liquid Wastes
E2.1	Solid waste and recycling collection points
E2.3	Solid waste from construction and demolition projects retained in the area for re-use or recycling
E2.5	Composting and re-use of organic sludge
E3	Resource consumption, retention and maintenance

**E3.2** Consumption of non-renewable material resources for construction of infrastructure

**F- ENVIRONMENT**

<b>F1</b>	Environmental impacts
<b>F1.1</b>	Impact of construction activities on natural features
<b>F1.3</b>	Recharge of groundwater through permeable paving or landscaping
<b>F1.8</b>	Impact of private vehicles used by the local population on peak load capacity of the local road system
<b>F2</b>	Outdoor environmental quality
<b>F2.3</b>	Ambient air quality with respect to particulates <10 µm (PM10) over a one-year period
<b>F3</b>	Ecosystems and landscapes
<b>F3.6</b>	Tree coverage for shade and management of local ambient temperatures
<b>F3.10</b>	Ecological diversity in the area

**G- SOCIAL ASPECTS**

<b>G2</b>	Traffic and Mobility Services
<b>G2.1</b>	Public transport service
<b>G2.4</b>	Quality of pedestrian and bicycle network
<b>G3</b>	Communication services
<b>G3.1</b>	Availability of a broadband communication network
<b>G4</b>	Public and private facilities and services
<b>G4.2</b>	Availability and proximity of key public services
<b>G5</b>	Local Food
<b>G5.1</b>	Local production of food
<b>G6</b>	Management and community involvement
<b>G6.3</b>	Community involvement in urban planning activities
<b>G7</b>	Society, Culture and Heritage
<b>G7.1</b>	Compatibility of urban design with local cultural values

## SNTool criteria selection rationale

<b>A - BUILT URBAN SYSTEMS</b>		
	CRITERION	REASON/MOTIVATION
<b>A1</b>	Urban structure and form	<i>Comment here</i>
<b>A1.2</b>	Urban compactness	To improve current urban design rules and visual appearance of the neighborhood
<b>A1.4</b>	Residential density	To determine if residential density
<b>A1.7</b>	Conservation of land	To determine if all undeveloped land is needed for future residential use as defined by urban development plan
<b>A2</b>	Transportation infrastructure	
<b>A2.2</b>	Walking distance to public transport for area workers and students	To determine sufficient number of bus stops
<b>A2.9</b>	On-street and indoor parking spaces relative to local population	To determine required number of parking lots and avoid parking on the roads
<b>A2.10</b>	Intermodality facilities	To improve mobility for the inhabitants and induce use of alternative mobility principles
<b>B - ECONOMY</b>		
	CRITERION	REASON/MOTIVATION

<b>B1</b>	<b>Economic Structure and Value</b>	
<b>B1.1</b>	<i>Affordability of housing property</i>	<i>To determine if local population have financial resources for future residential development</i>
<b>B1.6</b>	<i>Percent of residential units in the neighbourhood that are vacant</i>	<i>To determine if there are housing properties still unused</i>
<b>B2</b>	<b>Economic activity</b>	
<b>B2.2</b>	<i>Average annual per-capita income of residents</i>	<i>To determine financial capacities of local population</i>
<b>B3</b>	<b>Cost and Investment</b>	
<b>B3.3</b>	<i>Use stage energy costs for public buildings</i>	<i>To determine if energy costs are entered in the national energy management software and the amount of costs</i>
<b>B3.4</b>	<i>Levels of total public and private investment</i>	<i>To determine levels of investments and if there is a potential to use them more targeted. No tracking of data for private investment</i>

## C - ENERGY

	CRITERION	REASON/MOTIVATION
<b>C1</b>	<b>Non-renewable energy</b>	
<b>C1.1</b>	<i>Total final thermal energy consumption for building operations</i>	<i>To determine energy demand of the area – modeled energy used</i>
<b>C1.4</b>	<i>Total final electrical energy consumption for building operations</i>	<i>To determine energy demand of the area – actual energy consumption used</i>
<b>C1.7</b>	<i>Total primary energy demand for building operations</i>	<i>To determine energy demand of the area, typical fuels used and assess the potential of on-site RES energy consumption – modeled energy used for thermal energy, actual energy consumption used for electricity</i>
<b>C2</b>	<b>Renewable and Decarbonised Energy</b>	
<b>C2.1</b>	<i>Share of renewable energy on-site relative to total final energy consumption for building operations</i>	<i>To assess current and future on-site RES energy production to reduce fossil fuel use</i>
<b>C2.4</b>	<i>Share of renewable energy on-site, relative to total primary energy consumption for building operations</i>	<i>To assess current and future on-site RES energy production and reduce dependence on grid supply and reduce fossil fuel use</i>
<b>C2.7</b>	<i>Share of renewable energy on-site, on final electric energy consumption</i>	<i>To assess current and future on-site RES electricity production and reduce dependence on grid supply</i>

## D - ATMOSPHERIC EMISSIONS

	CRITERION	REASON/MOTIVATION
<b>D1</b>	<b>Atmospheric emissions</b>	<i>Comment here</i>
<b>D1.2</b>	<i>GHG emissions from primary energy used in building operations</i>	<i>To assess current and future emissions related to energy consumption if energy refurbishment and RES measures are implemented</i>
<b>D1.7</b>	<i>Total GHG Emissions from buildings, private and public mobility</i>	<i>To assess current and future emissions related to energy consumption if energy refurbishment, RES and e-mobility measures are implemented</i>

## E - NON - RENEWABLE RESOURCES

	CRITERION	REASON/MOTIVATION
<b>E1</b>	Potable water, stormwater and greywater	
<b>E1.6</b>	Consumption of potable water for residential population	To assess level of water consumption
<b>E1.7</b>	Consumption of potable water for public non-residential building systems	To assess level of water consumption in non-residential buildings
<b>E2</b>	Solid and Liquid Wastes	
<b>E2.1</b>	Solid waste and recycling collection points	To determine availability of recycling collection points for solid waste and future needs
<b>E2.3</b>	Solid waste from construction and demolition projects retained in the area for re-use or recycling	To determine the local practice of construction waste management
<b>E2.5</b>	Composting and re-use of organic sludge	To determine the local practice of organic sludge re-use
<b>E3</b>	Resource consumption, retention and maintenance	
<b>E3.2</b>	Consumption of non-renewable material resources for construction of infrastructure	To determine if re-use or recycling of construction materials is a practice in the construction sector and if not, what are the obstacles

## F - ENVIRONMENT

	CRITERION	REASON/MOTIVATION
<b>F1</b>	Environmental impacts	
<b>F1.1</b>	Impact of construction activities on natural features	To determine the impacts of construction on natural features of the area and to define mitigation measures for future development
<b>F1.3</b>	Recharge of groundwater through permeable paving or landscaping	To determine the impacts of construction on soil permeability and to define mitigation measures for future development
<b>F1.8</b>	Impact of private vehicles used by the local population on peak load capacity of the local road system	To determine local road traffic intensity
<b>F2</b>	Outdoor environmental quality	
<b>F2.3</b>	Ambient air quality with respect to particulates <10 µm (PM10) over a one-year period	To determine air quality measurement levels close to the neighborhood and compare measured values to allowed values
<b>F3</b>	Ecosystems and landscapes	
<b>F3.6</b>	Tree coverage for shade and management of local ambient temperatures	To determine existence of private and public green areas quantity and shading capacity
<b>F3.10</b>	Ecological diversity in the area	To determine the qualitative features of ecological elements and to assess the impact of forest fire hazard

## G- SOCIAL ASPECTS

	CRITERION	REASON/MOTIVATION
<b>G2</b>	Traffic and Mobility Services	
<b>G2.1</b>	Public transport service	To compare mobility demand of residents to availability of public transport
<b>G2.4</b>	Quality of pedestrian and bicycle network	To promote cycling and walking as an alternative to vehicle use by providing a safe and efficient mobility networks
<b>G3</b>	Communication services	

<b>G3.1</b>	Availability of a broadband communication network	<i>To determine the percentage of households already connected to internet and future demand for broadband connection</i>
<b>G4</b>	Public and private facilities and services	
<b>G4.2</b>	Availability and proximity of key services	<i>To enable better access to key public human services through better mobility or use of communication network</i>
<b>G5</b>	Local Food	
<b>G5.1</b>	Local production of food	<i>To introduce concept of local food production as local construction rules in physical planning documents</i>
<b>G6</b>	Management and community involvement	
<b>G6.3</b>	Community involvement in urban planning activities	<i>To involve residents in formulation of local construction rules and projects in the neighborhoods</i>
<b>G7</b>	Society, Culture and Heritage	
<b>G7.1</b>	Compatibility of urban design with local cultural values	<i>To introduce more traditional construction features in the local construction rules and improve visual appearance of the neighborhood</i>

## SNTool weights rationale

### ISSUES WEIGHTS

ISSUE	WEIGHTING FACTOR (1 to 3)	MOTIVATION
<b>A- BUILT URBAN SYSTEMS</b>	1	Improvement of the built urban system needs to be initiated from the residents to improve upgrade and development of infrastructure
<b>B- ECONOMY</b>	1	It is aimed to improve management of the existing resources not only to increase the investments
<b>C- ENERGY</b>	3	Increase the rate of households to be involved in energy retrofit, on-site RES systems and EV
<b>D- ATMOSPHERIC EMISSIONS</b>	1	Improvement of air quality will be achieved by activities in other areas - energy refurbishment, on-site RES and e-mobility
<b>E- NON - RENEWABLE RESOURCES</b>	3	Improve local management of non-renewable resources
<b>F- ENVIRONMENT</b>	1	Improve ambient value and traditional features of the landscape
<b>G- SOCIAL ASPECTS</b>	3	Encourage local capacities and participation for future development of the neighborhood

### CATEGORIES WEIGHTS

CATEGORIES	WEIGHT (%)
<b>A1- Urban Structure and Form</b>	5,7
<b>A2- Transportation Infrastructure</b>	6,1
<b>TOTAL</b>	<b>12,2</b>
<b>B1- Economic Structure and Value</b>	2,0

B2- Economic activity	1,1
B3- Cost and Investment	1,6
<b>TOTAL</b>	<b>4,6</b>
C1- Non-Renewable energy	11,2
C2- Renewable and Decarbonised energy	10,4
C3- Energy recycling and storage	0
<b>TOTAL</b>	<b>21,5</b>
D1- Atmospheric emissions	13,3
<b>TOTAL</b>	<b>13,3</b>

## SNTool Criteria Specifications

A- BUILT URBAN SYSTEMS			
CRITERION	INDICATOR	SPECIFICATIONS	
A1.2	Urban compactness	Information source	Model
		Assessment method	Max constructed area (above ground): <ul style="list-style-type: none"> <li>• 1,6 (residential use)</li> <li>• 2,0 (mixed use) x height 3 m = 4,8 – 6</li> <li>• 40% = developed</li> <li>• 10% = Green area + streets + parking</li> </ul> Total constructed area 2,4 - 3
		Standard	Local physical plan, Art 23 (PPUG)
A1.4	Residential density	Information source	Model
		Assessment method	"Mravince 280 ha/ 1.628 stanovnika. = 0,17 residents / ha
		Standard	National Census 2011 for number of residents Local physical plan for neighborhood surface
A1.7	Conservation of land	Information source	Measured data
		Assessment method	Total neighborhood area/ecological land area = 2%
		Standard	Local physical plan for surfaces No specific reference on ecological land
A2.2	Walking distance to public transport for area workers and students	Information source	measured
		Assessment method	<a href="https://geoportal.dgu.hr">https://geoportal.dgu.hr</a>
		Standard	Development program of the city 2018-2025
A2.9	On-street and indoor parking spaces relative	Information source	Measured data

	<i>to local population</i>	Assessment method	<ul style="list-style-type: none"> <li>Counting the number of parking spaces in the neighborhood</li> <li>National Census 2011 for number of residents</li> </ul>
		Standard	Local physical plan (PPUG)
		Information source	Measured data
A2.10	Intermodality facilities	Assessment method	<a href="https://geoportal.dgu.hr">https://geoportal.dgu.hr</a>
		Standard	No specific standard, estimation is given

B- ECONOMY			
CRITERION	INDICATOR	SPECIFICATIONS	
B1.1	Affordability of housing property	Information source	
		Assessment method	
		Standard	Annual report on average income per resident in the city Current market price for housing property National Census 2011 for average size of housing property
B1.6	Percent of residential units in the neighbourhood that are vacant	Information source	Site visit
		Assessment method	Site visit
		Standard	-
B2.2	Average annual per-capita income of residents	Information source	statistics
		Assessment method	Revenue per worker/number of residents in the neighborhood
		Standard	Development program of the city 2018-2025
B3.3	Use stage energy costs for public buildings	Information source	Partly data bank, partly measured
		Assessment method	Energy consumption collected from energy providers / EMIS system used to collect data on area public buildings;
		Standard	-
B3.4	Levels of total public and private investment	Information source	Monitored

	Assessment method	(Expenses for the acquisition of long-term assets / number of residents) x percentage of residents of the neighborhood
	Standard	City budget, Expenses for the acquisition of long-term assets; National Census 2011 for number of residents

C- ENERGY			
CRITERION	INDICATOR	SPECIFICATIONS	
C1.1	Total final thermal energy consumption for building operations	Information source	Modeled
		Assessment method	Definition of year of construction of buildings – three categories are prevailing, built before 1940, after 1970 and after 2006. For each category specific thermal energy demand is defined according Strategy for long-term energy refurbishment of building sector in Croatia. Total surface of buildings = number of households x average surface of household.
		Standard	Strategy for long-term energy refurbishment of buildings sector in Croatia
C1.4	Total final electrical energy consumption for building operations	Information source	Measured data
		Assessment method	Report from energy distributor
		Standard	-
C1.7	Total primary energy demand for building operation	Information source	Measured data
		Assessment method	Report from energy distributor
		Standard	-
C2.1	Share of renewable energy on-site relative to total final thermal energy consumption for building operations	Information source	Modeled
		Assessment method	Calculation of energy produced from on-site systems / specific final energy consumption (for specific construction period) x total surface of buildings).
		Standard	Strategy for long-term energy refurbishment of buildings sector in Croatia
C2.4	Share of renewable energy on-site, relative to total primary energy consumption for building	Information source	Modeled
		Assessment method	(Calculation of energy produced from on-site systems x primary energy factor) / (specific

C2.7	operations		final energy consumption (for specific construction period) x total surface of buildings) x primary energy factor)
		Standard	Strategy for long-term energy refurbishment of buildings sector in Croatia Primary energy factors in Croatia
		Information source	Modeled
	Share of renewable energy on-site, on final electric energy consumption	Assessment method	(Calculation of electric energy produced from on-site systems x primary energy factor) / total electricity consumption
		Standard	Data on electricity consumption from energy distributor

D- ATMOSPHERIC EMISSIONS			
CRITERION	INDICATOR	SPECIFICATIONS	
D1.2	GHG emissions from primary energy used for in building operations	Information source	Modeled
		Assessment method	Total energy consumption per fuel x GHG factor for specific fuel
		Standard	GHG emissions factors in Croatia
D1.7	Total GHG Emissions from buildings, private and public mobility	Information source	Modeled
		Assessment method	Total energy consumption per fuel x GHG factor for specific fuel
		Standard	GHG emissions factors in Croatia

E- NON-RENEWABLE RESOURCES			
CRITERION	INDICATOR	SPECIFICATIONS	
E1.6	Consumption of potable water for residential population	Information source	Measured data
		Assessment method	Water consumption / number of inhabitants
		Standard	Data on water consumption from water distributor National Census 2011 for number of residents
E1.7	Consumption of potable water for public non-residential building systems	Information source	Measured data
		Assessment method	Annual water consumption / surface of buildings

		Standard	-
		Information source	Site visit
E2.1	Solid waste and recycling collection points	Assessment method	Inserting positions of waste bins in Google Earth tool and measuring distance from houses
		Standard	-
		Information source	Site visit
E2.3	Solid waste from construction and demolition projects retained in the area for re-use or recycling	Assessment method	Estimation
		Standard	-
		Information source	-
E3.2	Consumption of non-renewable material resources for construction of infrastructure	Assessment method	-
		Standard	-

F- ENVIRONMENT			
CRITERION	INDICATOR	SPECIFICATIONS	
		Information source	Questionnaire for residents
F1.1	Impact of construction activities on natural features	Assessment method	-
		Standard	Assessment criteria for the KPI
		Information source	Measured data
F1.3	Recharge of groundwater through permeable paving or landscaping	Assessment method	Calculation of surfaces of different finishing x permeability factor
		Standard	Assessment criteria for the KPI
		Information source	Questionnaire for residents
F1.8	Impact of private vehicles used by the local population on peak load capacity of the local road system	Assessment method	-
		Standard	Assessment criteria for the KPI

F2.3	Ambient air quality with respect to particulates <10 mu (PM10) over a one-year period	Information source	Data from measuring station
		Assessment method	Annual measurement
		Standard	National standard
F3.6	Tree coverage for shade and management of local ambient temperatures.	Information source	Measured data
		Assessment method	Calculation of shaded surfaces of different finishing / total public surface
		Standard	-
F3.10	Ecological diversity in the area	Information source	Questionnaire for residents
		Assessment method	Estimation
		Standard	-

G- SOCIAL ASPECTS			
CRITERION	INDICATOR	SPECIFICATIONS	
G2.1	Public transport service	Information source	Measurement on a map
		Assessment method	Percentage of inhabitants that are within 400 meters walking distance of at least one public transportation service stop
		Standard	-
G2.4	Quality of pedestrian and bicycle network.	Information source	Measurement on a map
		Assessment method	Total walkway meters of dedicated pedestrian paths and meters of bicycle path and "shared space" per 100 inhabitants.
		Standard	-
G3.1	Availability of a broadband communication network	Information source	Modeled data
		Assessment method	Estimated number of users
		Standard	Plan for development of broadband infrastructure in the city
G4.2	Availability and proximity of key public human services	Information source	Modeled data
		Assessment	Percentage of inhabitants in radius of 800 m

		<i>method</i>	<i>from key public services</i>
		<i>Standard</i>	-
		<i>Information source</i>	<i>Modeled data</i>
<b>G5.1</b>	<i>Local production of food</i>	<i>Assessment method</i>	<i>Calculation of area of vegetable gardens in the area</i>
		<i>Standard</i>	-
		<i>Information source</i>	<i>Questionnaire for residents</i>
<b>G6.3</b>	<i>Community involvement in urban planning activities</i>	<i>Assessment method</i>	<i>Described based on the type of response / total number of responses</i>
		<i>Standard</i>	<i>Assessment criteria for the KPI</i>

## COMPARATIVE ANALYSIS

## Total number of criteria calculated

N° Criteria TOT	City of Turin	City of Udine	EVBDM	AURA-EE	GEN CAT	Sant Cugat	UoM	NOA	EIHP	Average
Urban	34	46	16	19	33	59	66	44	38	32,83

Table1: Number of criteria that compose the 9 Regional Tools.

A first information derived from the analysis of the 9 Regional reports collected concerns the number of criteria selected by the partners to compose their Regional Tools. Obviously each of them has had to calculate the 16 mandatory KPIs and, to these criteria, others have been added to be calculated, depending on their regional needs.

The average value deriving from the analysis is equal to 33 criteria, obviously, as anticipated, it is an average value, in fact, some partners have limited the calculation to those which are mandatory or a little more, while others have composed regional instruments with over 60 criteria. The bar chart below shows the numerical distribution of the criteria one by one, for all the nine partners involved in the task; the range of fluctuation of values has as minimum value the 16 criteria selected by EnvirobatBDM and reaches the maximum value of 66 criteria selected and calculated by the University of Malta.

Chart1: Bar chart showing the numerical distribution of criteria selected by each partner.

## Number of criteria per area

After quantifying the number of criteria selected by each partner, a distribution analysis of them was conducted so as to understand which areas are the most densely populated.

Thanks to the distributive analysis of the criteria within the different seven areas, it can be stated that the area most densely populated of criteria is Area G, related to Social Aspects, to follow Area C, related to Energy Aspects. Compared to the latter area, it is interesting to note that the number of selected criteria is quite homogeneous unlike the situation for Area G, where the disparity in the number of selected criteria is definitely clear.

N° of Criteria per Areas	City of Turin	City of Udine	EVBDM	AURA-EE	GEN CAT	Sant Cugat	UoM	NOA	EIHP	Average
<b>A</b>	4	5	1	1	3	3	9	4	6	<b>4,0</b>
<b>B</b>	2	5	1	1	5	3	3	4	5	<b>3,2</b>
<b>C</b>	12	7	5	6	9	9	8	13	6	<b>8,3</b>
<b>D</b>	1	2	1	1	1	2	1	1	2	<b>1,3</b>
<b>E</b>	4	8	2	4	3	8	7	4	6	<b>5,1</b>
<b>F</b>	4	8	2	2	7	8	14	7	6	<b>6,4</b>
<b>G</b>	7	11	4	4	5	16	24	11	7	<b>9,9</b>

Table2: Numerical distribution of criteria making up the 9 Regional Tools, distributed in the seven areas. In the last column there are the weighted average values of this distribution.

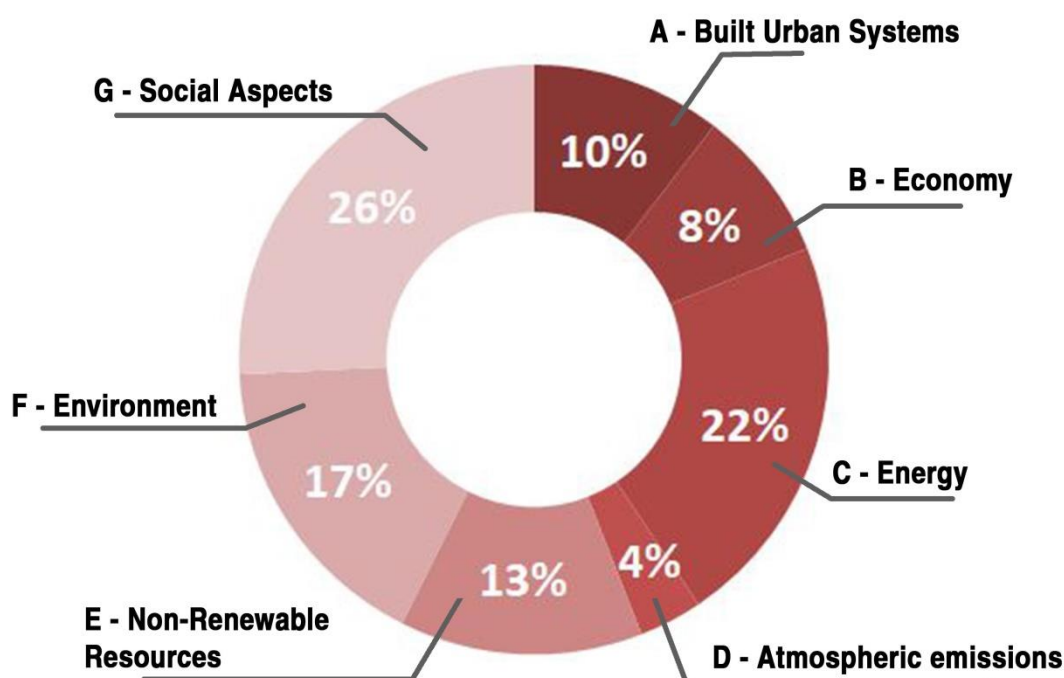

Chart2: Pie chart showing the percentage distribution of the criteria within the 7 areas making up the tool, resulting from the weighted average of the individual values of the 9 Regional Tools.

Almost similarly populated are Area E - Non - Renewable Resources and Area F - Environment, which have reciprocally the 13% and 17% of the total criteria. The remaining two areas, respectively named Area B - Economy and Area D - Atmospheric Emissions, are the least populated in term of criteria, among the reasons there is certainly the fact that these areas have already a small number of indicators within the Generic Framework, compared to the others, moreover, with regard to Area B - Economy, this appears to be generically less priority and relevant than the others.

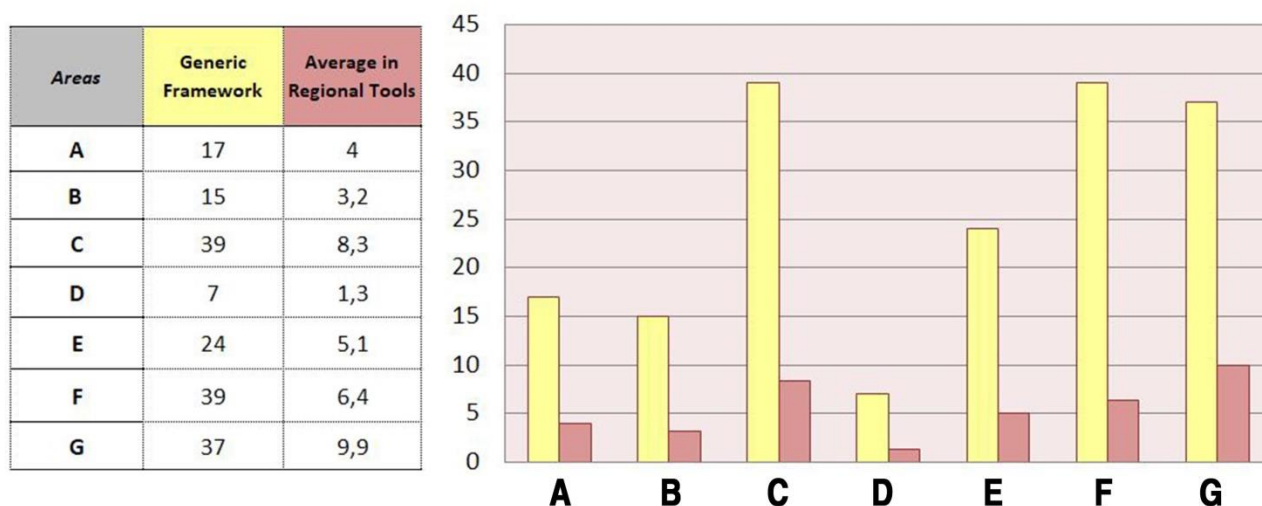

Chart3: On the left, the table shows the number of criteria existing in the Generic Framework broken down by area, subsequently compared with the average value obtained from the analysis of the 9 Regional Tools. On the right, the bar chart that graphically translates the results.

As can be seen by looking at the image above, the ratio between the total number of criteria in a specific area of the Generic Framework and the average of those calculated in the different Regional Tools is often not proportional. However, this graph allows us to understand that the most crowded areas are often those that already contain a large number of selectable criteria in the Generic Framework.

## Average value of Priority factors per KPIs

For each criterion included within the Regional Tool it was necessary to assign a priority factor concerning the Impact, the Extent and the Duration of the effect of that specific criterion, with the purpose of defining an order of importance and relevance between the criteria, being able to more easily complete the weighing operation.

The table below summarizes the average values obtained from the analysis of the 9 Regional Tools for each of the 16 KPIs, in relation to:

- B= Impact of the Potential effect (1-3)
- C= Extent of potential effect (1-5)
- D= Duration of potential effect (1-5)
- 

Code	Criterion	Value	Average
A1.7	Conservation of Land	<i>B= Impact</i>	2
		<i>C=Extent</i>	3
		<i>D=Duration</i>	4
B3.3	Use stage energy cost for public buildings	<i>B= Impact</i>	2
		<i>C=Extent</i>	2
		<i>D=Duration</i>	3
C1.1	Total final thermal energy consumption for building operations	<i>B= Impact</i>	3
		<i>C=Extent</i>	3
		<i>D=Duration</i>	3
C1.4	Total final electric energy consumption for building operations	<i>B= Impact</i>	3
		<i>C=Extent</i>	3
		<i>D=Duration</i>	2
C1.7	Total primary energy demand for building operations	<i>B= Impact</i>	3
		<i>C=Extent</i>	3
		<i>D=Duration</i>	3
C2.1	Share of renewable energy on-site, relative to total final thermal energy consumption for building operations	<i>B= Impact</i>	3
		<i>C=Extent</i>	3
		<i>D=Duration</i>	3
C2.7	Share of renewable energy on-site, on final electric energy consumptions	<i>B= Impact</i>	2
		<i>C=Extent</i>	3
		<i>D=Duration</i>	3
D1.2	Total GHG Emissions from primary energy used in building operations	<i>B= Impact</i>	3
		<i>C=Extent</i>	5
		<i>D=Duration</i>	5
E1.6	Consumption of potable water for residential population	<i>B= Impact</i>	3
		<i>C=Extent</i>	3
		<i>D=Duration</i>	2

E1.7	Consumption of potable water for public non-residential building systems	<i>B= Impact</i>	2
		<i>C=Extent</i>	3
		<i>D=Duration</i>	2
F1.3	Recharge of groundwater through permeable paving or landscaping	<i>B= Impact</i>	2
		<i>C=Extent</i>	3
		<i>D=Duration</i>	3
F2.3	Ambient air quality with respect to particulates <10 mu (PM10) over a one year period	<i>B= Impact</i>	3
		<i>C=Extent</i>	3
		<i>D=Duration</i>	4
G2.1	Public transport service	<i>B= Impact</i>	3
		<i>C=Extent</i>	2
		<i>D=Duration</i>	3
G2.4	Quality of pedestrian and bicycle network	<i>B= Impact</i>	2
		<i>C=Extent</i>	3
		<i>D=Duration</i>	3
G4.2	Availability and proximity of key services	<i>B= Impact</i>	2
		<i>C=Extent</i>	3
		<i>D=Duration</i>	3
G6.3	Community involvement in urban planning activities	<i>B= Impact</i>	2
		<i>C=Extent</i>	2
		<i>D=Duration</i>	2

## Weight per area

The weighting is one of the crucial aspect in the all process, it consists in the assignment of a weight to each criterion, category and issue. The weight is expressed as a percentage. This process allows to align the assessment tool to local environmental, social and economic priorities. The table below shows the percentage distribution of the weights assigned by the partners to the seven areas of the Generic Framework. As for the previous analyzes, also in this case we proceeded by averaging the values obtained by each single partner.

Weight of Areas	City of Turin	City of Udine	EVBDM	AURA-EE	GEN CAT	Sant Cugat	UoM	NOA	EIHP	Average
<b>A</b>	11,6%	10,4%	18,9%	0,0%	6,5%	10,2%	13,5%	4,6%	12,2%	<b>9,8%</b>
<b>B</b>	1,7%	6,6%	5,0%	1,8%	9,1%	3,6%	1,8%	3,9%	4,6%	<b>4,2%</b>
<b>C</b>	41,1%	18,4%	30,5%	28,2%	26,7%	25,9%	16,2%	31,1%	21,5%	<b>26,5%</b>
<b>D</b>	6,9%	14,3%	23,6%	33,9%	7,3%	12,7%	5,8%	13,6%	13,3%	<b>14,6%</b>
<b>E</b>	6,9%	14,1%	3,4%	8,7%	7,3%	10,1%	11,7%	10,7%	14,3%	<b>9,6%</b>
<b>F</b>	18,3%	15,7%	9,4%	9,9%	31,3%	23,8%	28,7%	16,8%	9,0%	<b>18,1%</b>
<b>G</b>	13,4%	20,5%	9,1%	17,4%	15,4%	13,6%	22,3%	19,3%	25,0%	<b>17,2%</b>

Table3: Percentage distribution of the weights assigned by the partners to the seven Areas of the Tool. Cells in yellow represent the lower weight given while the green ones represent the higher weight.

The importance of the Area C - Energy within the Tool is immediately visible from the underlying horizontal bar chart. Almost all the partners attributed the greater weight to this area than all the others, justifying this choice precisely because of the importance that energy aspects have in the world in terms of environmental sustainability.

Chart4: Bar chart showing the average percentage weight obtained for each Area.

The average value attributed to Area C, which comes from the analysis conducted, corresponds to 26.5% over the total. In terms of percentage weight, immediately after Area C there is Area F - Environment, with an average of 18.1%. Not far from this last value there is the Area G - Social Aspects, which reaches an average of 17.2%, even in this case, the result is fairly homogeneous, in fact there were no significant numerical fluctuations between scores given by partners.

As is evident from the analysis carried out in the previous paragraph, despite the fact that the Area D - Atmospheric Emissions has few criteria taken into consideration, these still have a significant weight in the Tool, in fact, following the allocation of weights by the partners, the Area D is in any case enough influential in term of percentage, with 14.6% of importance compared to the total.

Area A - Built Urban Systems and Area E - Non-Renewable Resources, have achieved a similar percentage score, they appear to be less significant than the areas analyzed above but still have a percentage relevance within the Tool of about 10% each.

As shown in the paragraph dedicated to the number of criteria per area, few criteria of Area B - Economy have been taken into consideration to compose the Regional Tools; in the same way, it appears how this category of criteria is kept less in consideration than the others also regarding the priority in terms of weight of the area. The Area B - Economy has in fact a percentage weight of only 4.2% in the Tool.

## Average value of Minimum/Best value

Code	Criterion	Unit of Measure	Value	City of Turin	City of Udine	virobatBD	AURA-EE	GEN CAT	Sant Cugat	UoM	NOA	EHP	Average
A1.7	Conservation of Land	%	Minimum Best Value	0,5 2	7 42	15 30	10 20	4 15	10 20	10 28	10 20	2 10	7,6 20,8

Table4: Benchmark e Best values set out by each partners for all the 16 KPIs.

Benchmarking consists in the definition of the scoring scale for each selected criterion. The benchmark is a quantification of the indicator's value corresponding to the minimum acceptable performance and the one that is considered the best at regional level. Benchmarks can't be the same at transnational level because the local conditions of each region are different (climate, building practice, standards, level of advancement in the sustainability field, etc..). The scoring scale used in CESBA MED Urban Tool ranges from -1 to 5, where zero represents the minimum acceptable performance, 5 the excellence, 3 the best practice and -1 a negative performance.

The assignment of a reference value for the benchmark and also for the best performance is not at all a simple matter. For some criteria, there are legal limits to refer to, or national or regional regulations but finding these values is not always easy. Each partner has defined a benchmark and a best practice value for each of the 16 KPIs of the Tool, the previous table summarizes them, trying to identify even an average value which, in most cases, is not particularly meaningful, since, the reference values are definitely different between one country and another.

The rationale adopted by partners and the data sources investigated to define the reference values for the analyzed KPIs are summarized below.

Code	Criterion	Benchmark Rationale/Data source
A1.7	Conservation of Land	-Local planning rules. -Study by the agricultural Chamber for the local master plan.
B3.3	Use stage energy cost for public buildings	-Hypothesis. -Passive or NZEB Building. -National Institute of Energy. -National Agency for new technologies, energy and sustainable economic development (ENEA).
C1.1	Total final thermal energy consumption for building operations	-Passive or NZEB Building. -The average thermal consumption defined using data from the Energy Performance Certificates (EPC) electronic repository (buildingcert). -ec.europa.eu/energy/en/topics/energy-efficiency/buildings. -International Energy Agency. -EN ISO 13790 (Energy performance of buildings. Calculation of energy use for space heating and cooling). -National Institute of Energy. -(PAES), Sustainability and Energy Action Plan. -National Agency for new technologies, energy and sustainable economic development(ENEA). -TABULA EU Project: <a href="http://episcopes.eu/building-typology/">http://episcopes.eu/building-typology/</a> -UNI 11300.

C1.4	Total final electric energy consumption for building operations	<p>RT2012: New: Compliance with the new thermal regulations to come: RE 2020, level E1, respect for the share of electricity</p> <ul style="list-style-type: none"> <li>-Passive or NZEB Building.</li> <li>-EN ISO 13790 (Energy performance of buildings. Calculation of energy use for space heating and cooling).</li> <li>-National Institute of Energy.</li> <li>-(PAES), Sustainability and Energy Action Plan.</li> <li>-EURAC Study</li> </ul> <p><a href="http://www.eurac.edu/en/research/technologies/renewableenergy/publications/Documents/EURAC">http://www.eurac.edu/en/research/technologies/renewableenergy/publications/Documents/EURAC</a>.</p>
C1.7	Total primary energy demand for building operations	<p>-RT2012.</p> <ul style="list-style-type: none"> <li>-Levels from the future national building regulation called E+C- (Energy+ Carbon -).</li> <li>-EN ISO 13790 (Energy performance of buildings. Calculation of energy use for space heating and cooling).</li> <li>-National Institute of Energy.</li> <li>-(PAES) Sustainability and Energy Action Plan.</li> </ul>
C2.1	Share of renewable energy on-site, relative to total final thermal energy consumption for building operations	<ul style="list-style-type: none"> <li>-Scores based on the City of Lyon Sustainable Cities Guide.</li> <li>-Passive or NZEB Building.</li> <li>-The average ratio of the DHW energy consumption to the thermal energy consumption defined using calculated data from the Energy Performance Certificates (EPC) electronic repository (buildingcert).</li> <li>-EN ISO 13790 (Energy performance of buildings. Calculation of energy use for space heating and cooling).</li> <li>-2013/114/EU: Commission Decision of 1 March 2013.</li> <li>-2020 EU Strategy.</li> <li>-Association of Renewable Energy Professionals.</li> <li>-(PAES), Sustainability and Energy Action Plan.</li> <li>-National Legislative Decree.</li> </ul>
C2.7	Share of renewable energy on-site, on final electric energy consumptions	<ul style="list-style-type: none"> <li>-Scores based on the City of Lyon Sustainable Cities Guide.</li> <li>-Passive or NZEB Building.</li> <li>-EN ISO 13790 (Energy performance of buildings. Calculation of energy use for space heating and cooling).</li> <li>-2013/114/EU: Commission Decision of 1 March 2013.</li> <li>-(PAES), Sustainability and Energy Action Plan.</li> <li>-2020 EU Strategy.</li> </ul>

D1.2	Total GHG Emissions from primary energy used in building operations	-Regulation label. -Passive or NZEB Building. -EN 15603 (Energy performance of buildings - Overall energy use and definition of energy ratings). -(PAES) Sustainability and Energy Action Plan.
E1.6	Consumption of potable water for residential population	-Environmental Agency. -National Statistical Authority. -Municipal sustainability report concerning management of water. -Standard UNI PdR ITACA.
E1.7	Consumption of potable water for public non-residential building systems	-Environmental Agency. -National Statistical Authority. -Municipal sustainability report concerning management of water. -Standard UNI PdR ITACA.
F1.3	Recharge of groundwater through permeable paving or landscaping	-Local plan of urban planning and habitat. -Municipal Regulation. -UNI PdR ITACA.
F2.3	Ambient air quality with respect to particulates <10 µm (PM10) over a one year period	-Observatory of the quality of the air. -Statistical data. -Municipal regulations. -European Air quality Standards. -EU Directive limits. -Regional Agency for Environment Protection. -Eco-Management and Audit Scheme (EMAS).
G2.1	Public transport service	-Global Platform for Sustainable Cities - Urban Sustainability Framework. -Sustainable Cities Guide. -Specific study on the topic. -Mobility plan. -Technical study carried out by the Municipality for the public transport.
G2.4	Quality of pedestrian and bicycle network	-Global Platform for Sustainable Cities - Urban Sustainability Framework. -Sustainable Cities Guide. -Statistical Data.
G4.2	Availability and proximity of key services	-Global Platform for Sustainable Cities - Urban Sustainability Framework. -Sustainable Cities Guide.
G6.3	Community involvement in urban planning activities	Arnstein Method.

## Standard for calculation

Exactly how it was important to define, in the previous paragraph, the reference data sources of the criteria in order to extrapolate benchmark and best practice data, in the same way, it is fundamental to identify the support tools useful to perform the calculations for the quantification of the value of the indicators.

The table below summarizes the main information sources and tools used by the partners to perform the calculations.

Code	Criterion	Information sources
A1.7	Conservation of Land	-Measured data: Local physical plan for surfaces. -Municipal Urban Plan. -Thematic map – Geographic Information System.
B3.3	Use stage energy cost for public buildings	-Data bank. -Models and simulation. -Energy cost from Bills. -Estimated, Statistical data.
C1.1	Total final thermal energy consumption for building operations	-Modeled: Definition of year of construction of buildings. For each category specific thermal energy demand is defined according Strategy for long-term energy refurbishment of building sector. -VRF systems monitor. -Data from SEAP, Sustainability and Energy Action Plan. -Overall city consumptions (Database from Covenant of Majors).
C1.4	Total final electric energy consumption for building operations	-Measured: report from energy distributor. -National thermal regulation. -RE2020 regulation. -Data from (PAES), Sustainability and Energy Action Plan. -Overall city consumptions (Database from Covenant of Majors). -Monitored data.
C1.7	Total primary energy demand for building operations	-Measured: Report from energy distributor. -Calculations are based on EN 13790. -Data from (PAES), Sustainability and Energy Action Plan. -Overall city consumptions (Database from Covenant of Majors). -Monitored data. -(APE) Energy Performance Certification.
C2.1	Share of renewable energy on-site, relative to total final thermal energy consumption for building operations	-Modeled. -Calculations are based on EN 13790. -Municipal regulations. -Data from (PAES), Sustainability and Energy Action Plan. -Data from GSE – Manager Energy Services. -(APE) Energy Performance Certification.
C2.7	Share of renewable energy on-site, on final electric energy consumptions	-Data on electricity consumption from energy distributor. -Calculations are based on EN 13790. -Municipal regulations. -Data from (PAES), Sustainability and Energy Action Plan. -Data from GSE – Manager Energy Services.

D1.2	Total GHG Emissions from primary energy used in building operations	<ul style="list-style-type: none"> <li>-Modeled: GHG emissions factors in the country.</li> <li>-National Values of Emissions References Related to the Energy Mix.</li> <li>-National factors concerning emissions.</li> <li>-Estimated data.</li> <li>-National Energy Power Station.</li> <li>-Overall city consumptions (Database from Covenant of Majors).</li> <li>-(APE) Energy Performance Certification.</li> </ul>
E1.6	Consumption of potable water for residential population	<ul style="list-style-type: none"> <li>-Measured data: Data on water consumption from water distributor. National Census 2011 for number of residents.</li> <li>-(French) Tool "Water calculator".</li> <li>-Estimated data: Statistical data.</li> <li>-UNI PdR ITACA.</li> </ul>
E1.7	Consumption of potable water for public non-residential building systems	<ul style="list-style-type: none"> <li>-Measured data.</li> <li>-(French) Tool "Water calculator".</li> <li>-Estimated data: Statistical data.</li> <li>-UNI PdR ITACA.</li> </ul>
F1.3	Recharge of groundwater through permeable paving or landscaping	<ul style="list-style-type: none"> <li>-Measured data.</li> <li>-Thematic map – Geographic Information System.</li> <li>-Local context of the local plan of urban planning and habitat.</li> <li>-Google earths images.</li> </ul>
F2.3	Ambient air quality with respect to particulates <10 mu (PM10) over a one year period	<ul style="list-style-type: none"> <li>-Data from measuring station.</li> <li>-Observatory of the quality of the air.</li> <li>-Statistical data.</li> </ul>
G2.1	Public transport service	<ul style="list-style-type: none"> <li>-Measurement on a map.</li> <li>-Google Maps.</li> <li>-Thematic map – Geographic Information System.</li> </ul>
G2.4	Quality of pedestrian and bicycle network	<ul style="list-style-type: none"> <li>-Measurement on a map.</li> <li>-Thematic map – Geographic Information System.</li> <li>-Municipal Satellite maps.</li> </ul>
G4.2	Availability and proximity of key services	<ul style="list-style-type: none"> <li>-Thematic map – Geographic Information System.</li> <li>-Google Maps.</li> <li>-Municipal Satellite maps.</li> </ul>
G6.3	Community involvement in urban planning activities	<a href="http://www.participatorymethods.org/sites/participatorymethods.org/files/Arnstein%20ladder%201969.pdf">http://www.participatorymethods.org/sites/participatorymethods.org/files/Arnstein%20ladder%201969.pdf</a>

## KPIs value

F2.3	Ambient air quality with respect to particulates <10 mu (PM10) over a one year period	-1	1,9	0	3	5	5	-	-1	0
G2.1	Public transport service	5	3,8	5	0	5	5	2,1	5	-0,05
G2.4	Quality of pedestrian and bicycle network	-1	2,4	1,5	3	5	1,6	-0,4	5	0,08
G4.2	Availability and proximity of key services	5	5	5	5	5	5	5	5	-0,03
G6.3	Community involvement in urban planning activities	0	0	3,5	3	3	2	3	N.A.	0

Testing activity has been very useful for the understanding of the feasibility of the KPIs calculation and of course, to figure out the potential problems arising from data acquisition and the ones related to the performing of the calculation. There are criteria whose data have been very difficult to be acquired by the partners involved in the activity, like for example the data related to the share of renewable energy on-site, relative to total final thermal and electric energy consumption for building operations, to the consumption of potable water for residential population, the use stage energy cost for public buildings and so on.

It's important to underline that this difficulty is strictly related to the fact that it's not easy to get data about existing buildings, may be built many years ago, on the contrary, for new buildings this aspect appears less problematic.

After the testing activity, all the Key Performance Indicators have been kept in the list.

With regard to the minimum and the best values proposed by partners for all the KPIs at Urban scale, in most cases they are very different from each other. This happens because the data sources used are not the same and consequently the benchmarks fixed are different one country from another. Sometimes, also when the data sources taken into account are the same, values set out are not so similar. For that reason, the average value calculated for each minimum and best value of every KPIs is not always so significant.

There are, however, few cases in which the results are very close to each other, for example, the criterion related to the permeability F1.3 - Recharge of groundwater through permeable paving or landscaping has achieved from partners minimum and best values absolutely similar, using in most case as data source local urban plan of the municipal regulation. Also criteria F2.3 - Ambient air quality with respect to particulates <10  $\mu$  (PM10) over a one year period obtained comparable values

On the contrary, the energy criterion C1.7 - Total primary energy demand for building operations and the criterion E1.6 - Consumption of potable water for residential population, have obtained minimum and best values completely different and non-comparable and the same inconsistency is visible also for criterion G2.4 - Quality of pedestrian and bicycle network.

The section related to the standard for the calculation helps to understand what are the differences in the choice of the data source to be used to set benchmark and also the different tools used to perform the calculation of the criteria, justifying sometimes the numerical misalignments among partners.
