

Forest Bioenergy in the Protected Mediterranean Areas

2,05 M €

Project
budget

1,74 M €

ERDF/IPA

30 Months

Project
duration

A significant part of the Mediterranean forests is located in protected areas and even if they represent a great opportunity for the production of sustainable energy from biomass, high restrictions prevent the development of the sector.

ForBioEnergy's main objective is to foster bio-energy production in the protected areas, providing transnational solutions for reducing obstacles and planning models in order to exploit the full potential of biomass and at the same time to preserve the biodiversity of natural areas.
