RIMIGLIANO GREEN BEACH

THE NATURAL PARK OF RIMIGLIANO

The Natural Park of Rimigliano is a protected area located in San Vincenzo. It offers some of the most breath-taking panoramas of Tuscany on the sand dunes, Mediterranean scrub, oak and pine woods and on the shape of the Tuscan Archipelago that stand out the horizon. The weather is good throughout the year thanks to the protection of mountains and the mitigation of the sea winds. Visiting the park you can come across traces of the Etruscan population, who was the first to inhabit the area.

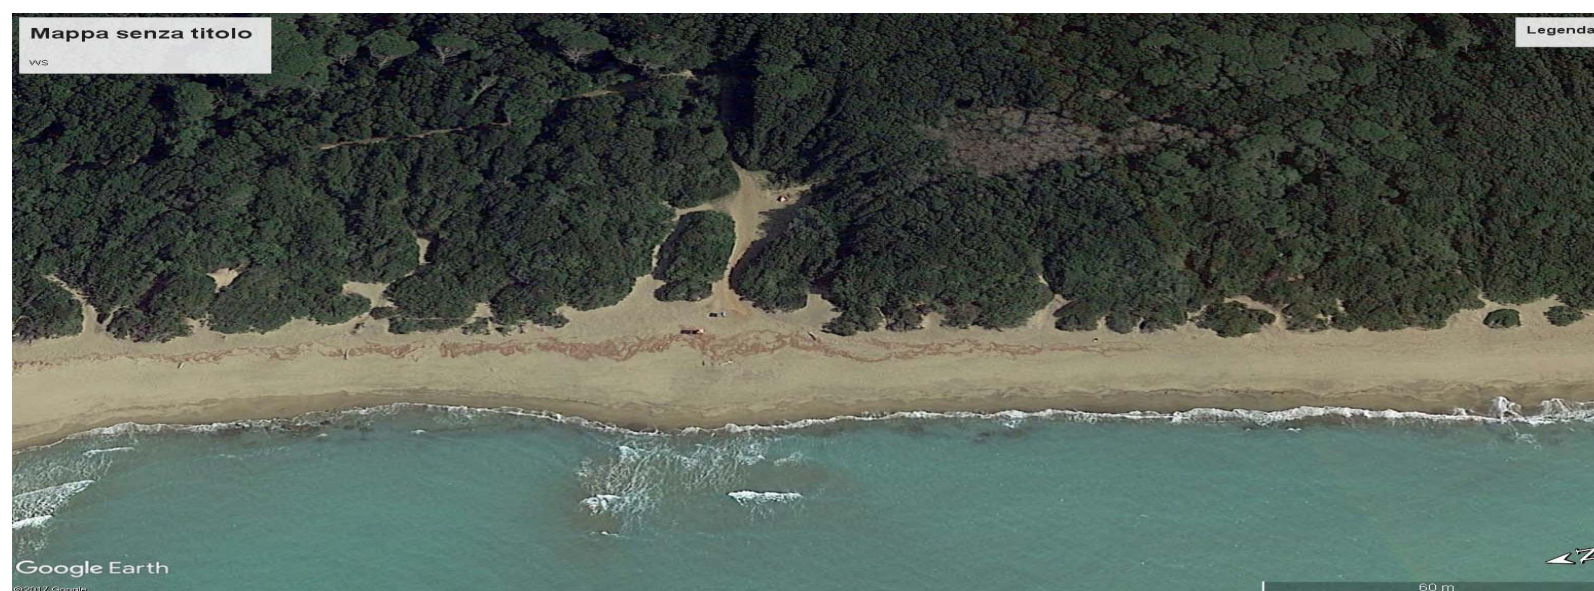

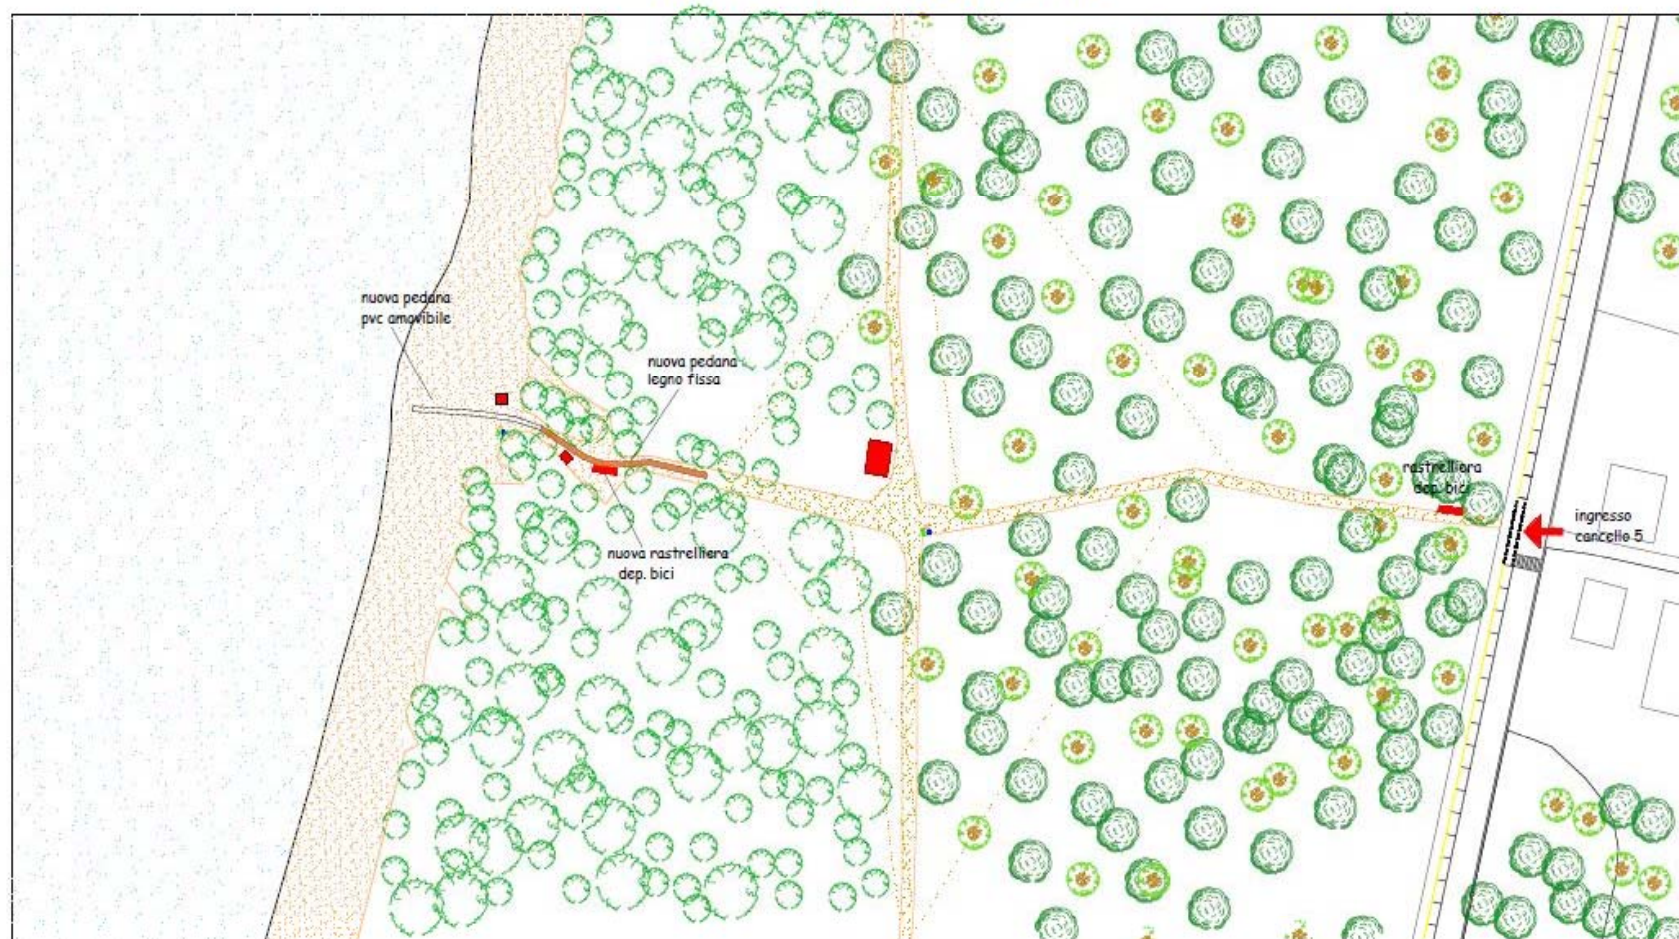

TERRITORIAL CONTEXT

*The "Green Beach" of San Vincenzo is located south of the territory and it is the beach that best reflects the features required in the "Green Beach Model". It is completely protected by the natural park of Rimigliano and accessible from the Principessa's road and the cycle-pedestrian path connected to the town.
Thanks to its morphology and existing services the beach has already many criteria required for the designation of 'Green beaches.*

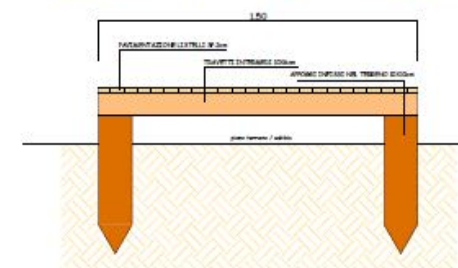

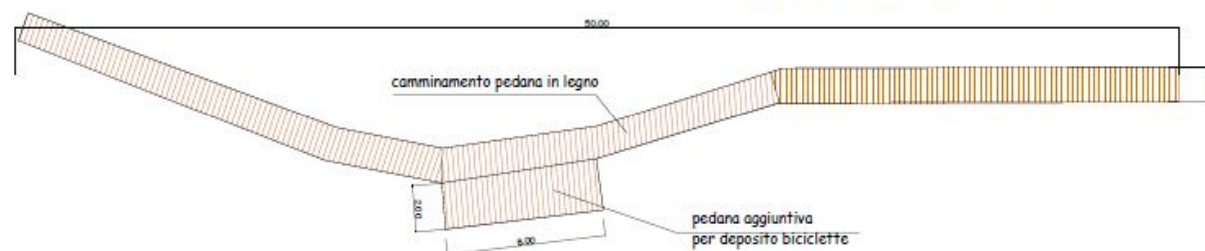

PROJECT AREA ORTHOPHOTO

PLANIMETRIA INGRESSO 5 - AREA DI INTERVENTO STATO DI PROGETTO

PARTICOLARE NUOVA PEDANA IN LEGNO

ACTIONS

- *Conservation of the natural state of dune with possible actions to protect it*
- *Measures for sustainable use and control of dune crossings*

- *Improvement of the internal park path accessibility*

- *Improvement of accessibility on the beach*

- *Purchase of job chairs for beach access*
- *Purchase of PVC and recycled plastic platforms to improve the beach access*

ACTIONS

- *Realization of n.2 parking facilities for the disables*

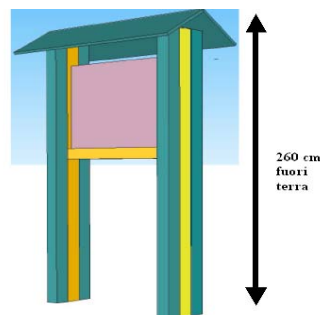

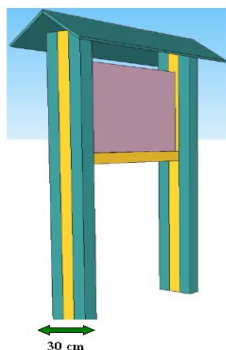

- *Retraining and reallocation of showers with disables access platform*

- *Beach entrance enlargement to allow beach cleaning service access*

- *Replacement of recycling bins*

- *Project to raise awareness bathers to use special bins for cigarettes butts that will be installed on the beach*

- *Creation of a special section on the website with green beach project information*

- *Implementation of adequate green beaches posters designing*

The entrance number 5 will allow entrance of mechanical means to manage sandy shore and security. Maintenance will be implemented with the aim to minimize the transit especially of mechanical means, in order to support the vegetation development. The main aspects to be monitored are safety and integrity, especially against possible risks for park's users.
