

PEGASUS contributes to reinforce the institutional capacity of partners to set up operational measures to introduce microgrids aiming to optimize energy production/consumption. PEGASUS will also dinamize the participation to the microgrids. The inovative approach of the project is focused on experimenting a simulation of functioning of microgrids in 7 pilot areas jointly: solutions will be based on concrete situation with real data.

PEGASUS project aims to give evidence of the feasibility of microgrids acting on technical or administrative obstacles which are hindering the use of microgrids in disadvantaged areas.
