

PEGASUS

Promoting effective generation and sustainable uses of electricity

PEGASUS contribuisce a rafforzare la capacità istituzionale dei partner ad adottare misure operative per introdurre tecnologie a microreti finalizzate ad efficientare la produzione e il consumo di energia. **PEGASUS** promuove la partecipazione alle microreti. L'approccio innovativo del progetto consiste nella sperimentazione di una simulazione di funzionamento delle microreti in 7 aree pilota contemporaneamente: le soluzioni saranno pertanto basate su situazioni e dati reali.

Il progetto **PEGASUS** intende dimostrare la praticabilità delle microreti intervenendo sugli ostacoli tecnici e/o amministrativi che impediscono l'uso delle microreti nelle aree svantaggiate.

PEGASUS

Promoting effective generation and sustainable uses of electricity

PEGASUS contributes to reinforce the institutional capacity of partners to set up operational measures to introduce microgrids aiming to optimize energy production/consumption.

PEGASUS will also dinamize the participation to the microgrids. The innovative approach of the project is focused on experimenting a simulation of functioning of microgrids in 7 pilot areas jointly: solutions will be based on concrete situation with real data.

PEGASUS project aims to give evidence of the feasibility of microgrids acting on technical or administrative obstacles which are hindering the use of microgrids in disadvantaged areas.
