 **Prominent MED**

Project co-financed by the European Regional Development Fund

Mindful that, the promotion of innovation in public procurement is a fundamental factor for improving the quality of the public service and for boosting entrepreneurial innovation capacity.

Considering that, we are fully aware that these targets may be achieved not only through a supply-oriented policy such as the promotion of research and innovation projects, but also from the demand side through public procurement of innovative products, system solutions and services.

Recognising that, in this context, Innovation procurement procedure and the Public Procurement for Innovation (PPI) in particular, represent a concrete tool to empower public authorities to obtain pioneering, innovative solutions customised to their specific needs. Indeed, it helps local and central governments to provide public service users with the best possible quality services in all the crucial areas of their life like health and ageing, climate change and energy, and resource scarcity.

Knowing that, Innovation Procurement enables the public sector to modernise its services while saving costs and it is also a way to foster growth and create new jobs, especially for the smaller innovative companies that are the backbone of the European economy and which are ideally placed to supply these new innovative products and services.

Considering that, within Prominent MED project, it has been developed the MED PPI network which is a concrete tool for the exploitation of PPI procedure in the MED area in particular for the smaller EU municipalities,

the undersigned parties commit themselves, in full compliance with the laws and regulations in force at EU and National level, during the project implementation to:

- promote the adhesion of public authorities, clusters, enterprises, academia and research centres to the MED PPI Network;
- exchange know how on public procurement of innovation (PPI) and promoting its adoption;
- sharing experiences and practices on how to deal with PPI;
- transfer the knowledge and methods developed during the project at national scale and MED scale through the organization of dedicated workshops and individual meetings;
- sign transferability protocols in order to set a common agreement and detailed transfer measures with public and private interested actors.

after the project end, to:

- guarantee the long term applicability and transfer of Prominent MED outputs and results at local level through i.e. organization of training sessions, study visits, provision of technical and legal support etc.;
- keep on collaborating in the MED PPI Network and via EU Thematic Communities;
- keep on promoting the use of PPI procedures also beyond the project areas: i.e. sharing the Prominent MED methodology and experience in external events or other initiatives.
