

Building Cross-Sectoral ITS Networks

Main target: building cross-sectoral competence networks to support the matching of the public sector challenges with private sector competencies in the field of intelligent transportation systems (ITS).

Events organised during the project:

- 06.02.19 Seminar in Tallinn with ITS network representatives
- 04.06.19 Networking seminar during ITS European Congress in Eindhoven
- 08.12.19 Networking seminar in Södertälje
- 13.02.20 Networking seminar with Tartu City and University of Tartu
- 09.06.20 Online event about intelligent transport solutions piloting
- 20.01.21 Virtual networking event for European ITS networks
- 9.-10.09.21 Estonian-Latvian networking event in Riga
- 11.-15.10.21 Networking event during ITS World Congress in Hamburg

Building Cross-Sectoral ITS Networks

Main outcomes:

- Stronger ITS networks in national and international level in BSR region – strong connections between ITS associations of the region;
- Private sector representatives and universities have better understanding of the public sector challenges in mobility and transport;
- Public sector representatives have more info of the potential solutions and competencies of private sector and universities;
- More trust between different stakeholders;
- Concrete pilot projects and initiatives between public and private sector entities have started after the events (like on-demand based autonomous last mile prototype, joint project on automation of logistics companies processes etc.)
- First steps to move jointly towards higher level R&D activities (Horizon Europe etc).
