Town of Sušice

DYNAMIC LIGHT

TOWARDS DYNAMIC, INTELLIGENT AND ENERGY EFFICIENT URBAN LIGHTING

Town of Sušice

DYNAMIC LIGHT

TOWARDS DYNAMIC, INTELLIGENT AND ENERGY EFFICIENT URBAN LIGHTING

Town of Sušice

Area:	45,63 km ²
Population:	11 146 inh.
Number of lighting points:	1 444 pc
Installed power input:	118 kW
Electricity consumption:	540 MWh/year

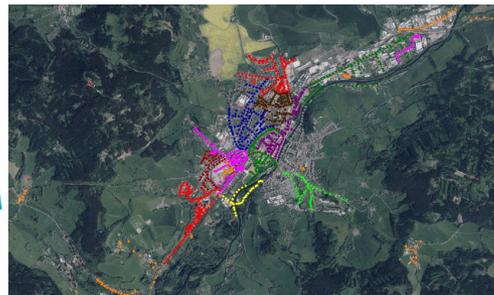

Public lighting system

Relative number of LP:	7,7 inh./LP
Relative input:	82 W/LP
Relative consumption:	374 kWh/year/LP
Cost of electricity:	750 CZK/year/LP

Project Dynamic Light

The Concept of public lighting in Town of Sušice

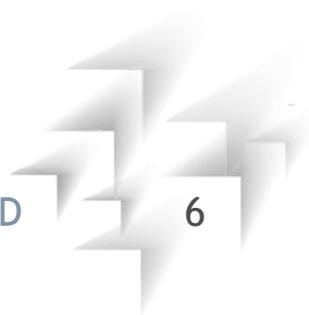

- Analysis of public lighting
- Strategy of public lighting
- Action Plan of renewal and modernization
- Public lighting standards

DYNAMIC LIGHT

TOWARDS DYNAMIC, INTELLIGENT AND ENERGY EFFICIENT URBAN LIGHTING

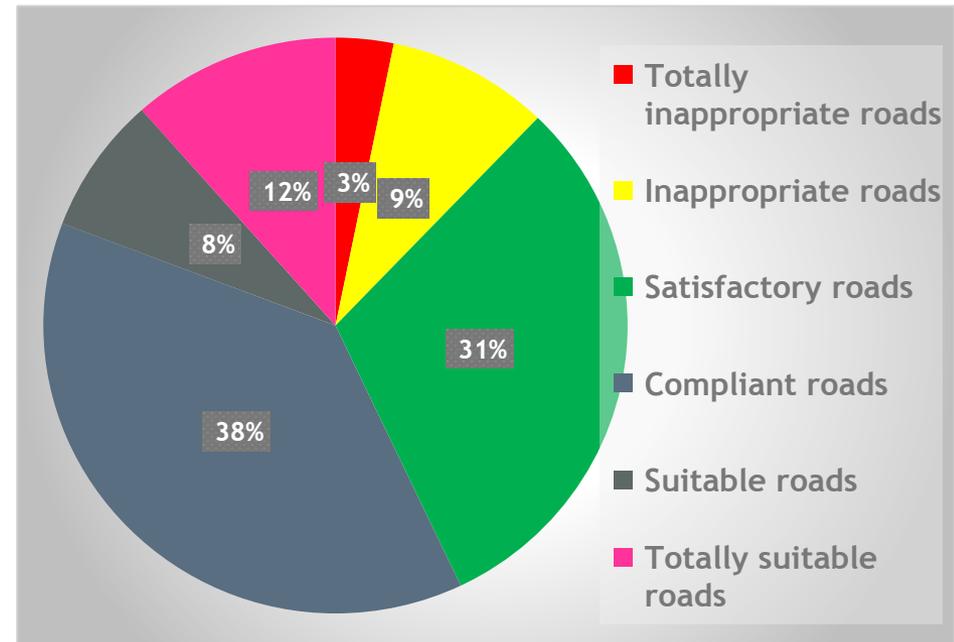

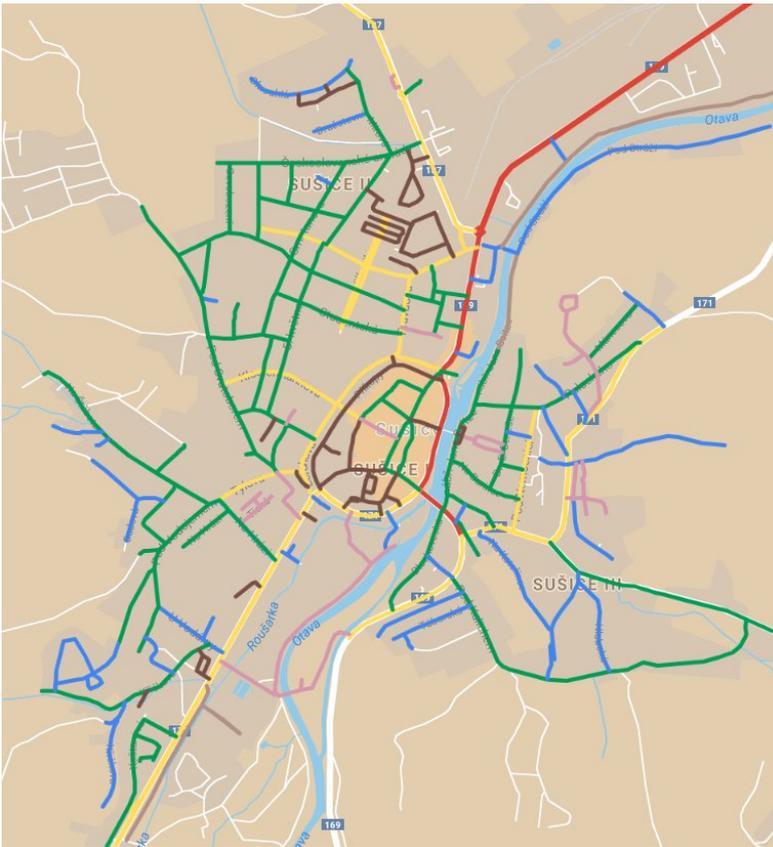

Selection of the Pilot Locations

DYNAMIC LIGHT

TOWARDS DYNAMIC, INTELLIGENT AND ENERGY EFFICIENT URBAN LIGHTING

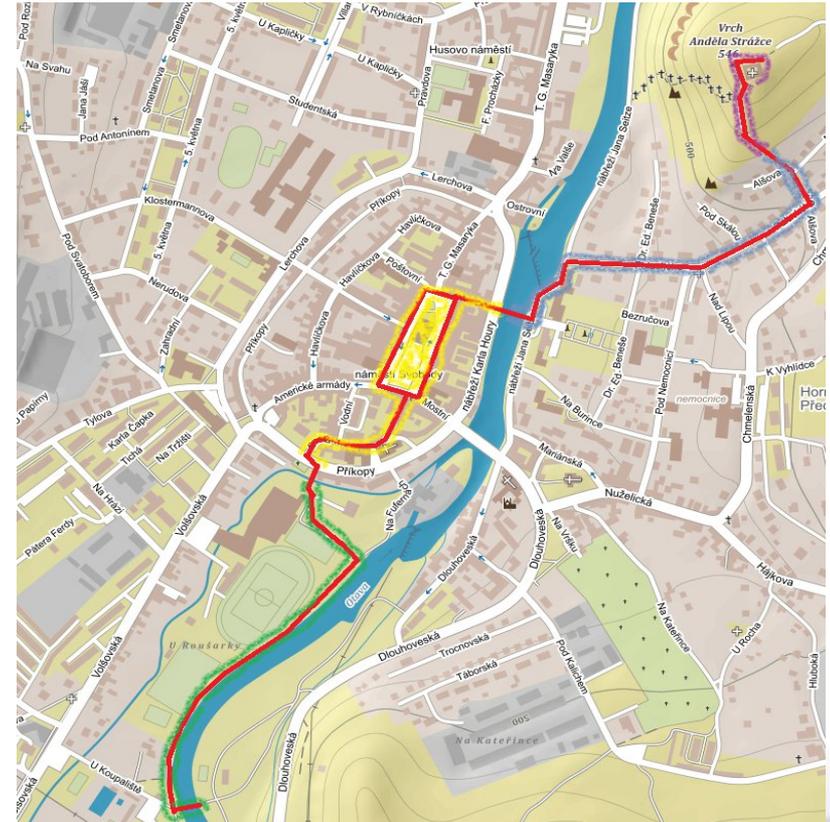

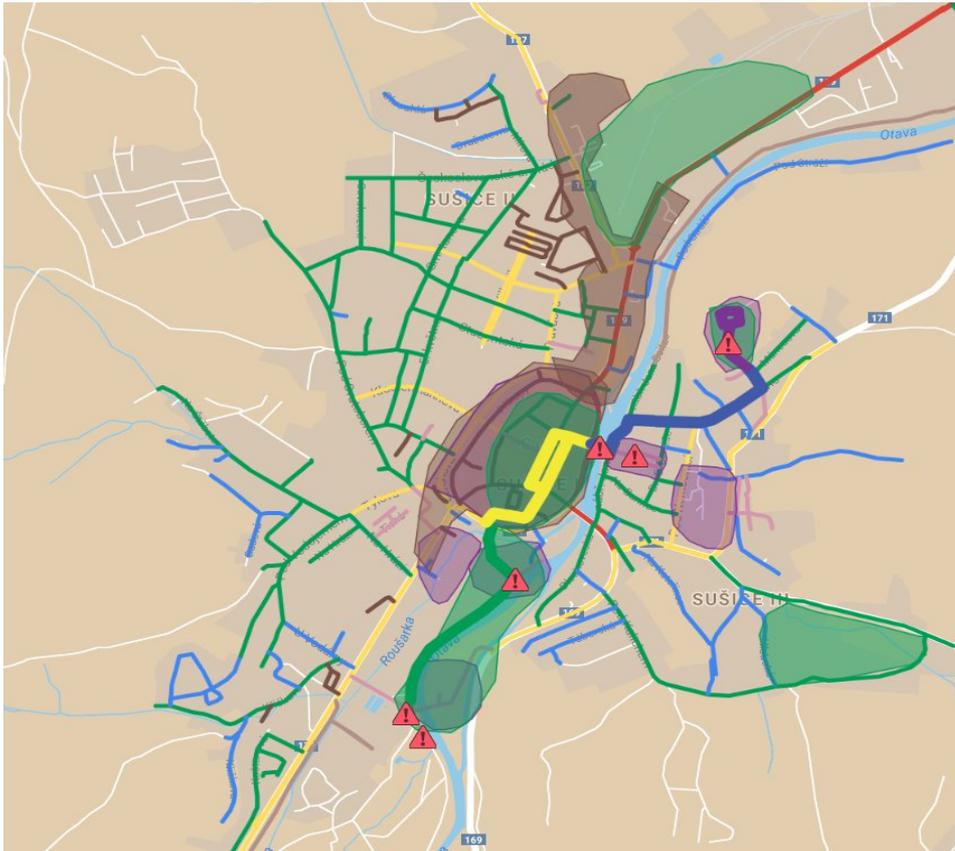

Road classification - suitable roads

DYNAMIC LIGHT

TOWARDS DYNAMIC, INTELLIGENT AND ENERGY EFFICIENT URBAN LIGHTING

Selection of suitable location for use of dynamic control

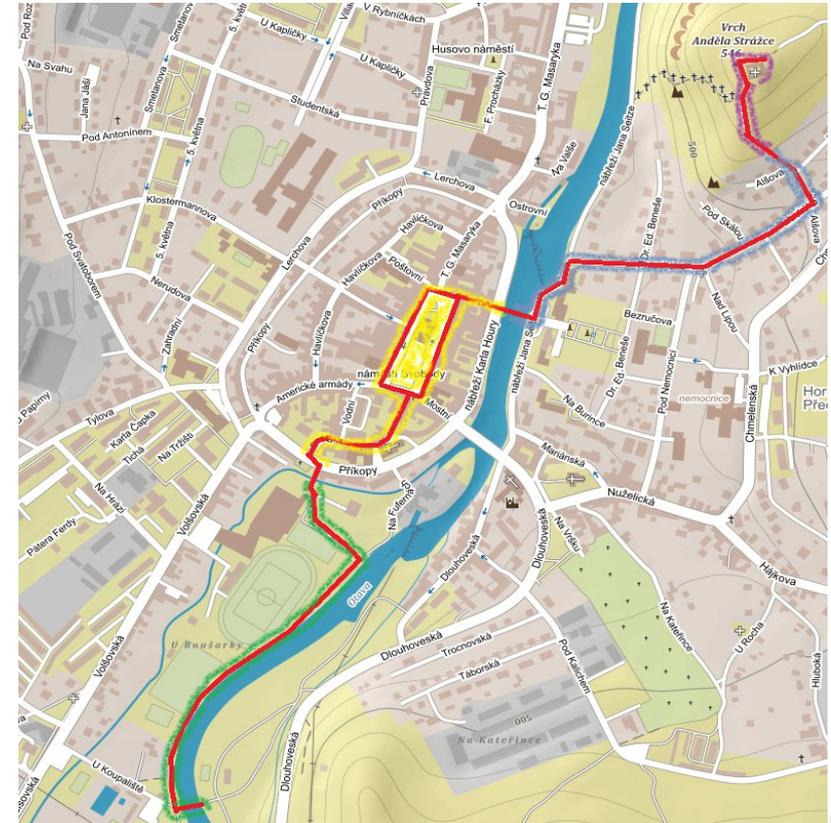

DYNAMIC LIGHT

TOWARDS DYNAMIC, INTELLIGENT AND ENERGY EFFICIENT URBAN LIGHTING

Selection of Pilot Location

The pilot is divided into four parts:

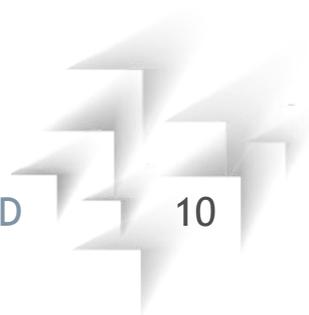

- Road „Otavská St.“ (green),
- City Centre; Nám. Svobody (yellow),
- Route from „Nábřeží Karla Houry“ (blue), to the chapel St. Angel the Guardian
- Surroundings of the chapel of St. Angel the Guardian (purple).

DYNAMIC LIGHT

TOWARDS DYNAMIC, INTELLIGENT AND ENERGY EFFICIENT URBAN LIGHTING

Pilot Location - surroundings of the chapel of St. Angel the Guardian

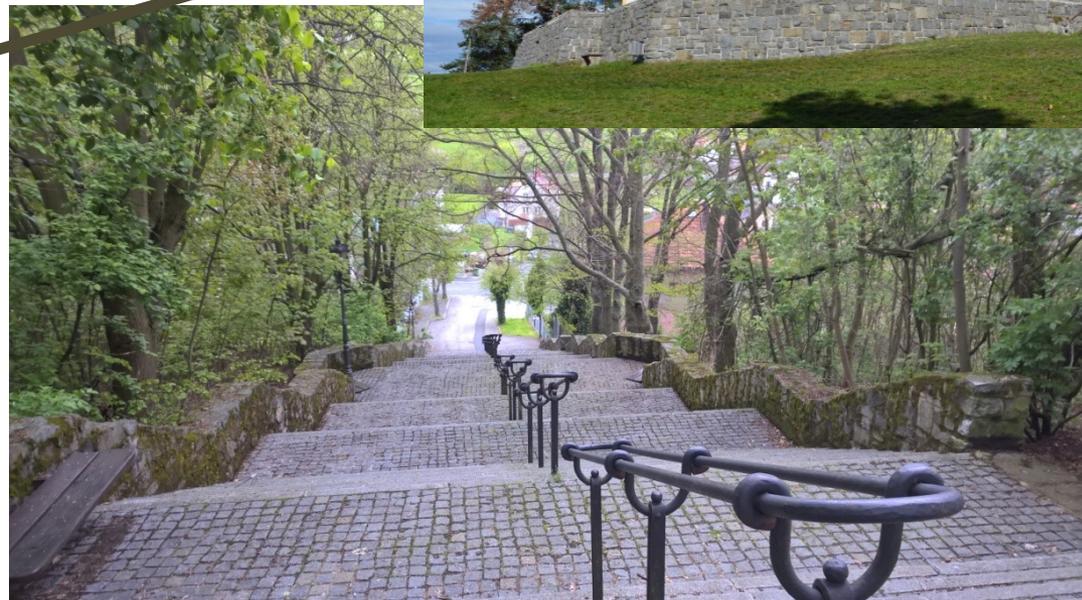

DYNAMIC LIGHT

TOWARDS DYNAMIC, INTELLIGENT AND ENERGY EFFICIENT URBAN LIGHTING

Surroundings of the chapel of St. Angel the Guardian

- Staircases (from Alšova Street)
- Surroundings of the chapel
- the chapel of St. Angel the Guardian

Initial state of lighting

Starecases - public lighting

- 5 pcs of historic lanterns - cast-iron luminaires; 70W HPS
- large pitch of luminaires along stairway & insufficiently illuminated

The chapel of St. Angel the Guardian - architectural lighting

- 2 light points with 250W floodlights for metal-halide lamps (on the masts)
- one lighting point on facade of the chapel (floodlight 250W)
- the floodlight primarily illuminates the chapel for views from the city center
- large proportion of the luminous flux radiated outside of the illuminated object
 - this luminous flux contributes to the light pollution of the environment

Lighting Concept - Surroundings of the chapel of St. Angel the Guardian

- Preservation of the decent atmosphere
- Improve stairway lighting
- Retrofitting of historical lantern + dynamic control
- Better plastic appearance of the illuminated chapel
- Illumination of the entire chapel structure
- Increased energy efficiency
- Reduction of obstructive light
- Dynamic lighting control (illumination, color temperature)
- Monitoring the presence of people on the stairs
- Remote control (PLC)

Lighting Concept - Surroundings of the chapel of St. Angel the Guardian

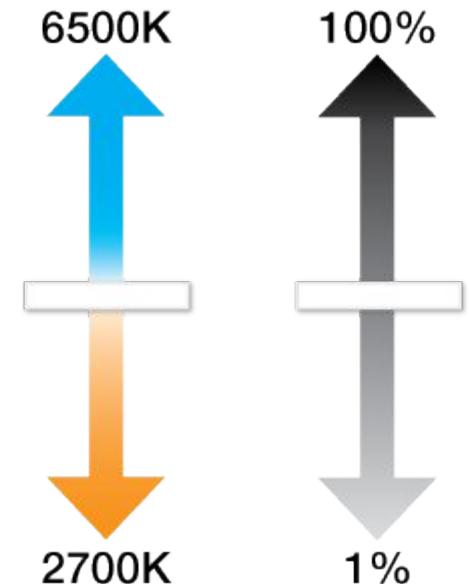

PUBLIC LIGHTING

Changes in lighting conditions based on:

- centrally preset time modes
- information from motion sensors mounted on masts

The variable parameters are:

- level of illumination
 - change in accordance with the time mode
 - change in accordance with the presence of people
- color tone of the light
 - change in accordance with the time mode
 - changes are independent of the street lighting modes (dimming)
 - two levels of chromaticity are used for defined time period
 - 2 700 K
 - 4 000 K

Lighting Concept - Surroundings of the chapel of St. Angel the Guardian

ARCHITECTURAL LIGHTING

Variable parameters

- adjustable level of illumination
- color tone of the light

Setting of parameters

- will not change overnight
- changes by the day mode
 - workdays
 - weekend
 - holiday
- In accordance with the season mode

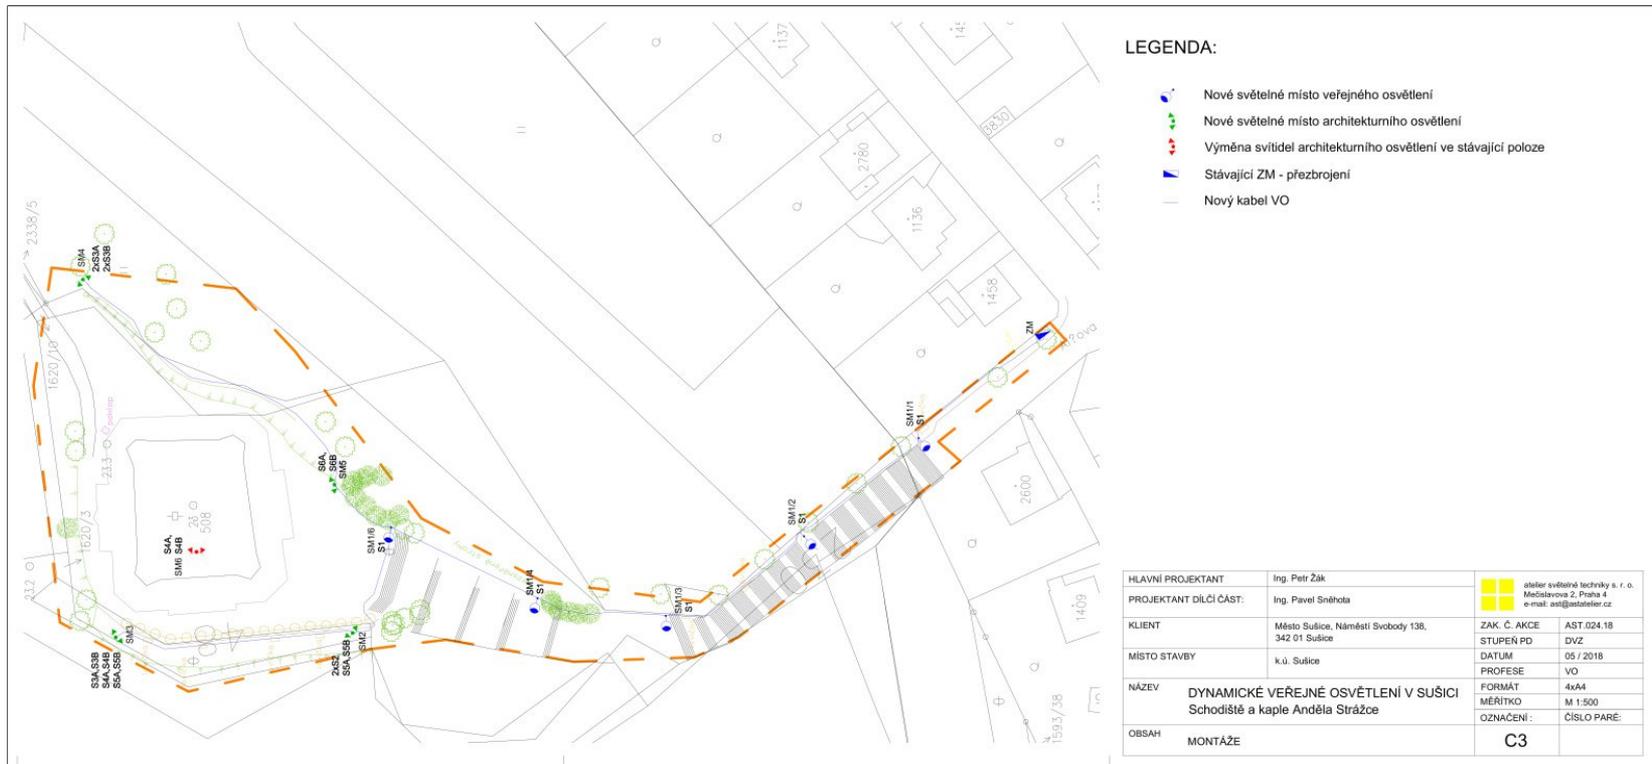

- Smooth regulation of luminous flux
- The illuminance level & chromaticity temperature can be adjusted individually
- The level of illuminance can be increased above the normal operating level
- Floodlights with variable chromaticity temperature (tunable white)
 - range 3 000 K - 5 000 K

DYNAMIC LIGHT

TOWARDS DYNAMIC, INTELLIGENT AND ENERGY EFFICIENT URBAN LIGHTING

Lighting Concept - Surroundings of the chapel of St. Angel the Guardian

DYNAMIC LIGHT

TOWARDS DYNAMIC, INTELLIGENT AND ENERGY EFFICIENT URBAN LIGHTING

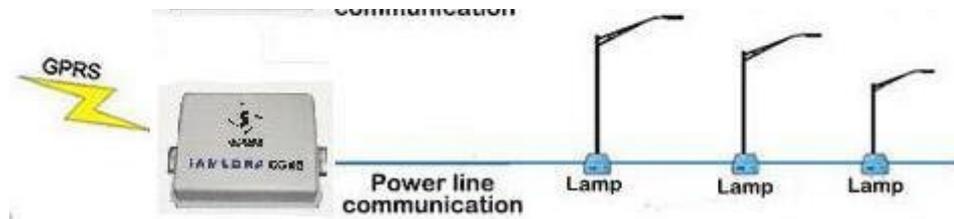

Public lighting

- Rebuild the existing historic cast-iron luminaires for high pressure sodium lamps (HPS)
- HPS 70 W replaced for 60 W LEDs
- fluent luminous flux control
- tunable color tone ranging from warm white to neutral white tone
- connection of the motion sensor
- communication with luminaires by PLC (Power Line Communication)
- control center (Getway) in the switchboard - communication via GPRS
- operating time modes of luminaires are in accordance with the "Public Lighting Standards of town Sušice"

Architectural lighting

illumination of the chapel

- LED floodlights
- different performances
- different radiating angles
- optional chromaticity temperature
- PLC communication units for independent control of luminaires
- operating profile of the lighting system is set and controlled centrally

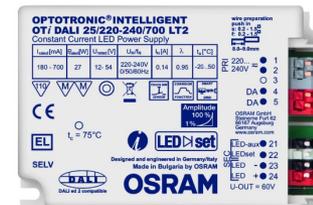

DYNAMIC LIGHT

TOWARDS DYNAMIC, INTELLIGENT AND ENERGY EFFICIENT URBAN LIGHTING

Lighting control

- power line communication (metal wires)
- protocol for control of luminaires: DALI
- all luminaires are controlled centrally
- lighting points are connected with the switching point through the DALI data bus and PLC
- the switching point are equipped with an RF unit for communication with the central control unit (remote control)
- floodlights for architectural illumination of the Chapel
 - fitted with a dimmable DALI ballast
 - used LEDs with a variable chromaticity temperature in the range of 3 000 to 5 000 K (tunable white)
 - floodlight equipped by glare shield

DYNAMIC LIGHT

TOWARDS DYNAMIC, INTELLIGENT AND ENERGY EFFICIENT URBAN LIGHTING

Parametr of the street lighting

Lighting mode - Common

Time	ON - 21:59		22:00 - 5:59		6:00 - OFF	
Mode	Adaptive - standard level		Adaptive - low level		Adaptive - standard level	
	presence	absence	presence	absence	presence	absence
Illuminance	80%	40%	40%	20%	80%	40%
	4lx	2lx	2lx	1lx	4lx	2lx

Lighting mode - Ceremonial

Time	ON - 21:59	22:00 - 5:59		6:00 - OFF
Mode	standard	Adaptive		standard
		presence	absence	
Illuminance	100%	60%	40%	60%
	5lx	3lx	2lx	3lx

DYNAMIC LIGHT

TOWARDS DYNAMIC, INTELLIGENT AND ENERGY EFFICIENT URBAN LIGHTING

Parametr of the street lighting

Values / levels of Illuminance

Mode	Note	Illuminance E_m (lx)
1. maximal	($E_m=100\%$)	5
2. standard	EN 13201-2	3
3. adaptive	presence	2
4. adaptive	absence	1

Color temperature modes

Day time	From	To	Color temperature T_{cp} (K)
Evening	ON	21:59	4 000
Night	22:00	5:59	2 700
Morning	6:00	OFF	4 000

DYNAMIC LIGHT

TOWARDS DYNAMIC, INTELLIGENT AND ENERGY EFFICIENT URBAN LIGHTING

Parameter of the architectural lighting

Modes and Surface brightness values

Facade	Work day		Weekend		Ceremonial day	
	L_m (Cd/m ²)	E_m (lx)	L_m (Cd/m ²)	E_m (lx)	L_m (Cd/m ²)	E_m (lx)
West	3,7	15	5	20	7,5	30
East	2,5	10	3,7	15	5	20
South	1,5	5	2	7	3	10
Nord	1,5	5	2	7	3	10

Color temperature modes

Season	Standard	Weekend & ceremonial
Spring	4 000 K	3 500 K
Summer	4 000 K	3 500 K
Autumn	2 700 K	3 500 K
Winter	2 700 K	3 500 K

DYNAMIC LIGHT

TOWARDS DYNAMIC, INTELLIGENT AND ENERGY EFFICIENT URBAN LIGHTING

Energy balance

Power consumption of the reconstructed section of street lighting:

- Existing installed power input 425W
- Installed power input of a new system 300W
- Power change $\Delta P = - 125W$

Before reconstruction

- Total input 1,25 kW
- the expected time of operation
 - street lighting 4 315 h/year
 - architectural lighting 2 127 h/year
- Annual power consumption
 - $W_{tot} = 3,58 \text{ MWh/rok}$

Power consumption of the new architectural lighting:

- Existing installed power input 825W
- Installed power input of a new system 720 W
- Power change $\Delta P = - 105W$

After reconstruction

- Total input 1,02 kW
- the expected time of operation with a dynamic control
 - operation of street lighting 4315/year
 - operation of architectural lighting 2 127/year
- Annual power consumption
 - 2,45 MWh/year

Costs - Surroundings of the chapel of St. Angel the Guardian

I. phase

- rebuild 5 lighting points
- rebuild luminaries (replacing HPS with LEDs)
- installation of 5 floodlights for architectural lighting of the stairway
- Dismantle old architectural lighting

Costs:

- Disassembly: 75 000 CZK
- Lighting points: 640 000 CZK
- Ground work: 270 000 CZK
- Cables and electro material: CZK 140 000
- Surfaces: 50 000 CZK
- Power supply and switching point: 50 000 CZK
- Other: 15 000 CZK
- **Phase I: 1 240 000 CZK**

II. phase

- build architectural lighting for distant views (hill with the chapel)
- installation of 9 pieces of LED spot lights

Costs:

- Disassembly: 210.000 CZK
- Cables and electro material : 40 000 CZK
- Power supply and ground work: 50 000 CZK
- Other: 10 000 CZK
- **Phase II: 310 000 CZK**

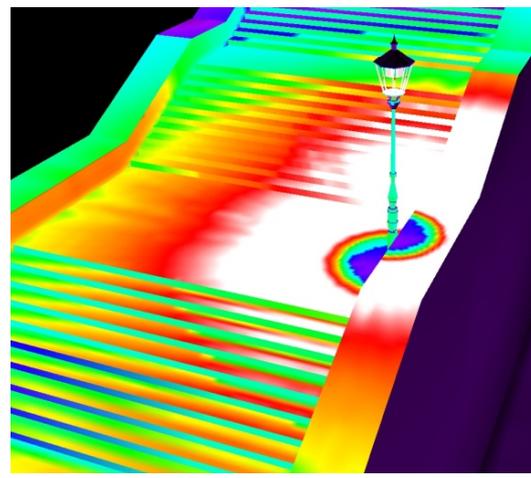

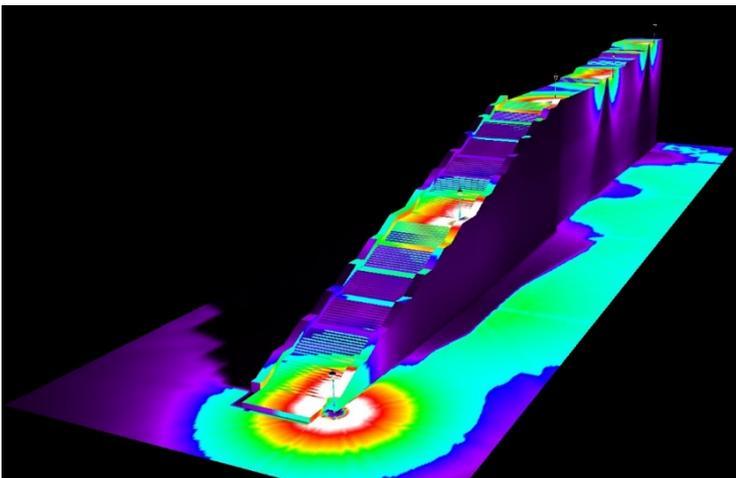

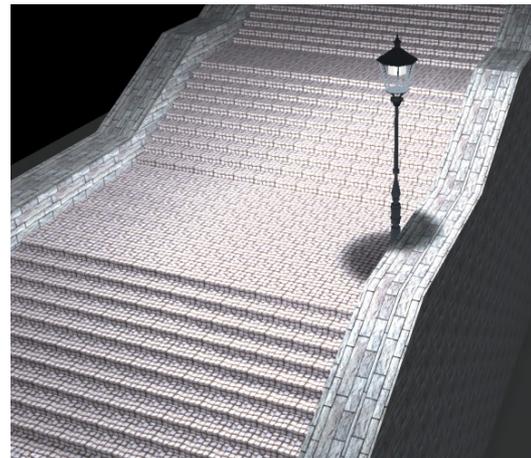

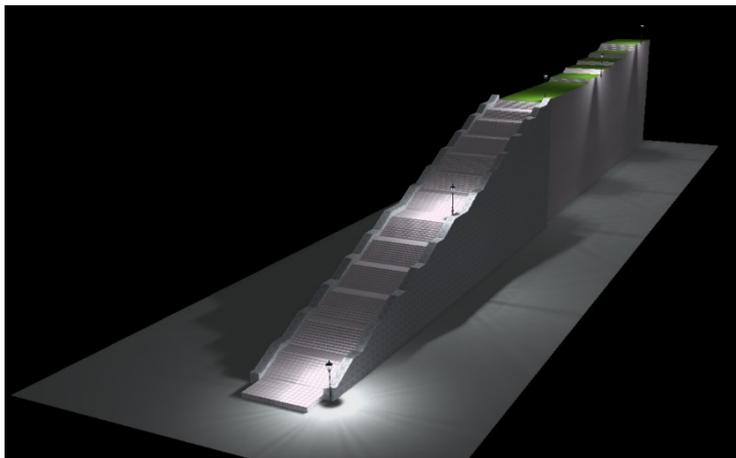

TOTAL

- I. & II. phase
- Pre-realization preparation about 150 000 CZK
- **Total = 1 700 000 CZK (68 000 EUR)**
